Microsoft

Microsoft Partner Project Ready

Implement Agent 365 to observe, govern, and secure AI apps, Copilot & Agents

<Speaker Name>

<Date>

Day 1 of 3

Technofocus

Course Plan and Learning Objectives

Day 1

Observe & control AI agents in real time

180 mins

Module 1: Microsoft Agent 365 as the Control Plane

- Agent 365 — unified control plane for agent security
- Agent 365 licensing (Microsoft 365 E7)
- Mapping Agent 365 controls to the Zero Trust for AI Framework
- Microsoft security infrastructure extended to AI agents

Module 2: Observe — real-time control for AI agents

Discover and inventory AI agents across your organization

- Navigating the Agent 365 overview page
- Accessing and exploring the Agent 365 registry
- Agent Lifecycle Management in Agent 365
- From users and apps to agent identities: expanding the identity perimeter
- Register and manage agents in Entra ID

Track AI agent performance, behavior and risk signals

- Agent Observability capabilities and readiness
- Implementing Agent Observability in Agent 365

Visualize AI agent relationships and ecosystem fit

- Agent map and ecosystem visibility
- Agent access patterns and trust controls

Hands-on Labs (60 min)

- ✓ Lab 00: Environment Setup
- ✓ Lab 01: Agent discovery and registry management using Agent 365
- ✓ Lab 02: Agent Identity configuration and monitoring in Microsoft Entra

Day 2

Govern and secure AI agents at Scale

180 mins

Module 3: Govern — guardrails for AI agents and users

Onboard agents with IT oversight and security policy

- Identifying and managing AI agents using Microsoft Entra Agent ID
- Administrative relationships in Microsoft Entra Agent ID

Governing agent identities (Preview) and ownerless agents in Agent 365

Audit, logging and compliance with Microsoft Purview

Module 4: Secure — comprehensive AI agent protection

Extend Conditional Access and identity controls to agents

Protect agent interactions with Microsoft Purview

- Mitigate oversharing, leaks and risky behavior with DSPM
- Purview Data Security Investigations
- Extending data security to custom agents via Microsoft Purview SDK

Defend agents against threats, vulnerabilities and attacks

- AI Security Posture Management
- Defender integration with Agent 365 and advanced hunting
- Threat detection and response with Microsoft Defender

Hands-on Labs (45 min)

- ✓ Lab 03: Configuring Conditional Access for Agent Identities
- ✓ Lab 04: Applying Sensitivity Labels and DLP for Copilot in MS Purview

Interactive Simulated Lab Experience (15 min)

- ✓ Lab 05: Threat Hunting for AI agents using Microsoft Defender

Day 3

Extend security across the AI lifecycle

180 mins

Module 5: AI Agent data access & sharing risks

- How agents access and share content
- Shadow AI Discovery in Global Secure Access
- Prompt Injection Protection
- MCP and tooling server access

Module 6: Security Dashboard for AI

- Unified AI risk visibility across Entra, Defender and Purview
- Risks, recommendations and remediation actions

Module 7: Security Copilot & Microsoft Security Store

- Security Copilot for agentic AI
- Extending SOC capabilities with Security Copilot agents
- Discovering and deploying agents via the Security Store
- Responsible AI principles across your agent strategy

Module 8: Foundry Control Plane — AI lifecycle governance

- Governing the AI lifecycle with Foundry Control Plane
- Continuous monitoring and agent evaluation
- Probing agent vulnerabilities with AI Red Teaming
- Tracing agent actions for visibility and accountability
- Enforcing safe AI outputs with Azure AI Content Safety

Hands-on Labs (60 min)

- ✓ Lab 06: Oversharing Assessment and Remediation using DSPM in MS Purview
- ✓ Lab 07: Audit, Retention, and Security Copilot in MS Purview

Day 01

Observe & control AI agents in real time

Agenda

Module 1: Microsoft Agent 365 as the Control Plane

- Agent 365 — unified control plane for agent security
- Agent 365 licensing (Microsoft 365 E7)
- Mapping Agent 365 controls to the Zero Trust for AI Framework
- Microsoft security infrastructure extended to AI agents

Module 2: Observe — real-time control for agents

Discover and inventory agents across your organization

- Navigating the Agent 365 overview page
- Accessing and exploring the Agent 365 registry
- Agent Lifecycle Management in Agent 365
- From users and apps to agent identities: expanding the identity perimeter
- Register and manage agents in Entra ID

Track agent performance, behavior and risk signals

- Agent observability capabilities and readiness
- Implementing Agent Observability in Agent 365

Visualize agent relationships and ecosystem fit

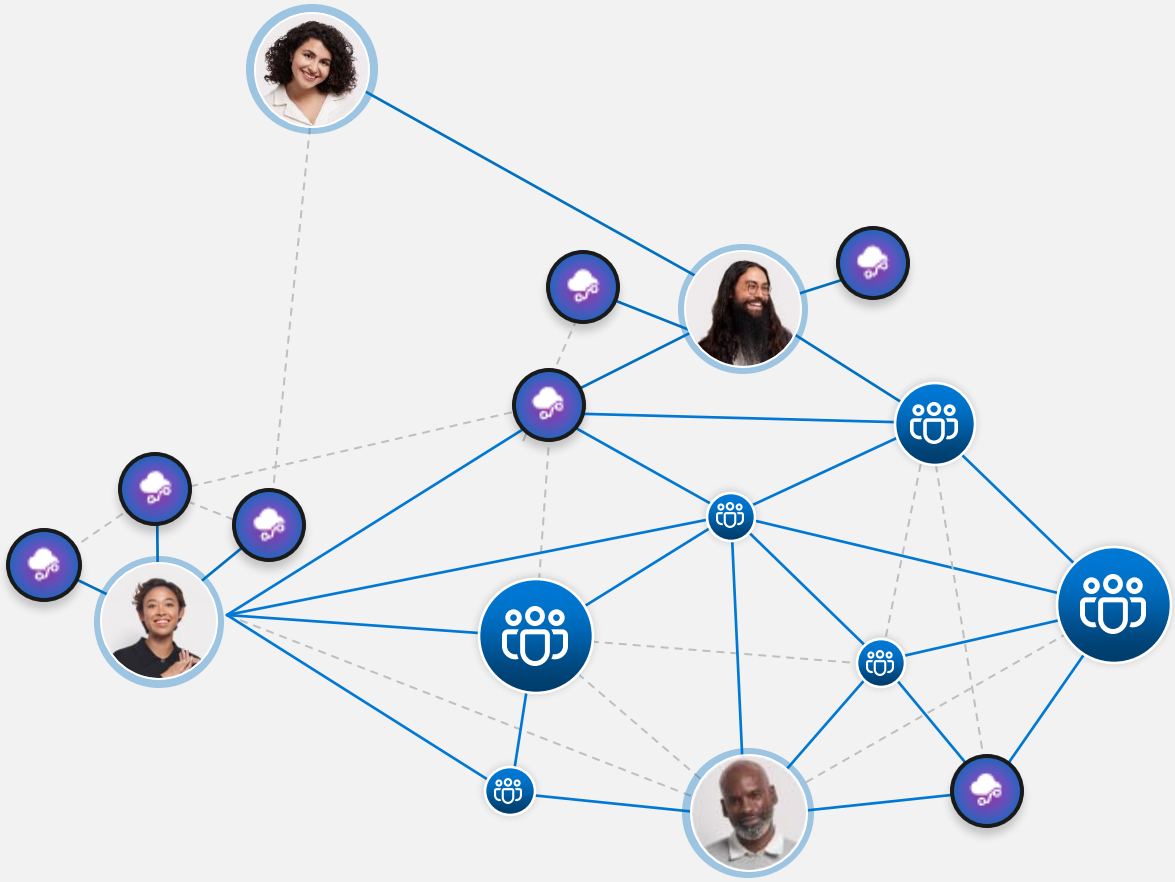

- Agent map and ecosystem visibility
- Agent access patterns and trust controls

Module 1

Microsoft Agent 365 as the Control Plane

Agent 365 — unified control plane for agent security

AI Agents are joining the workforce

Can IT discover and manage them?

Are they behaving appropriately?

Who & what are they sharing sensitive information with?

Are they well governed and audited?

Agents introduce new security challenges

Agent sprawl & resource access

82%

of leaders expect to use agents in the next 12–18 months to meet demand for workforce capacity[3]

Data oversharing & leaks

80%

of leaders cited leakage of sensitive data as their main concern[1]

Shadow AI, new AI threats & vulnerabilities

88%

of organizations are concerned about indirect prompt injection attacks[2]

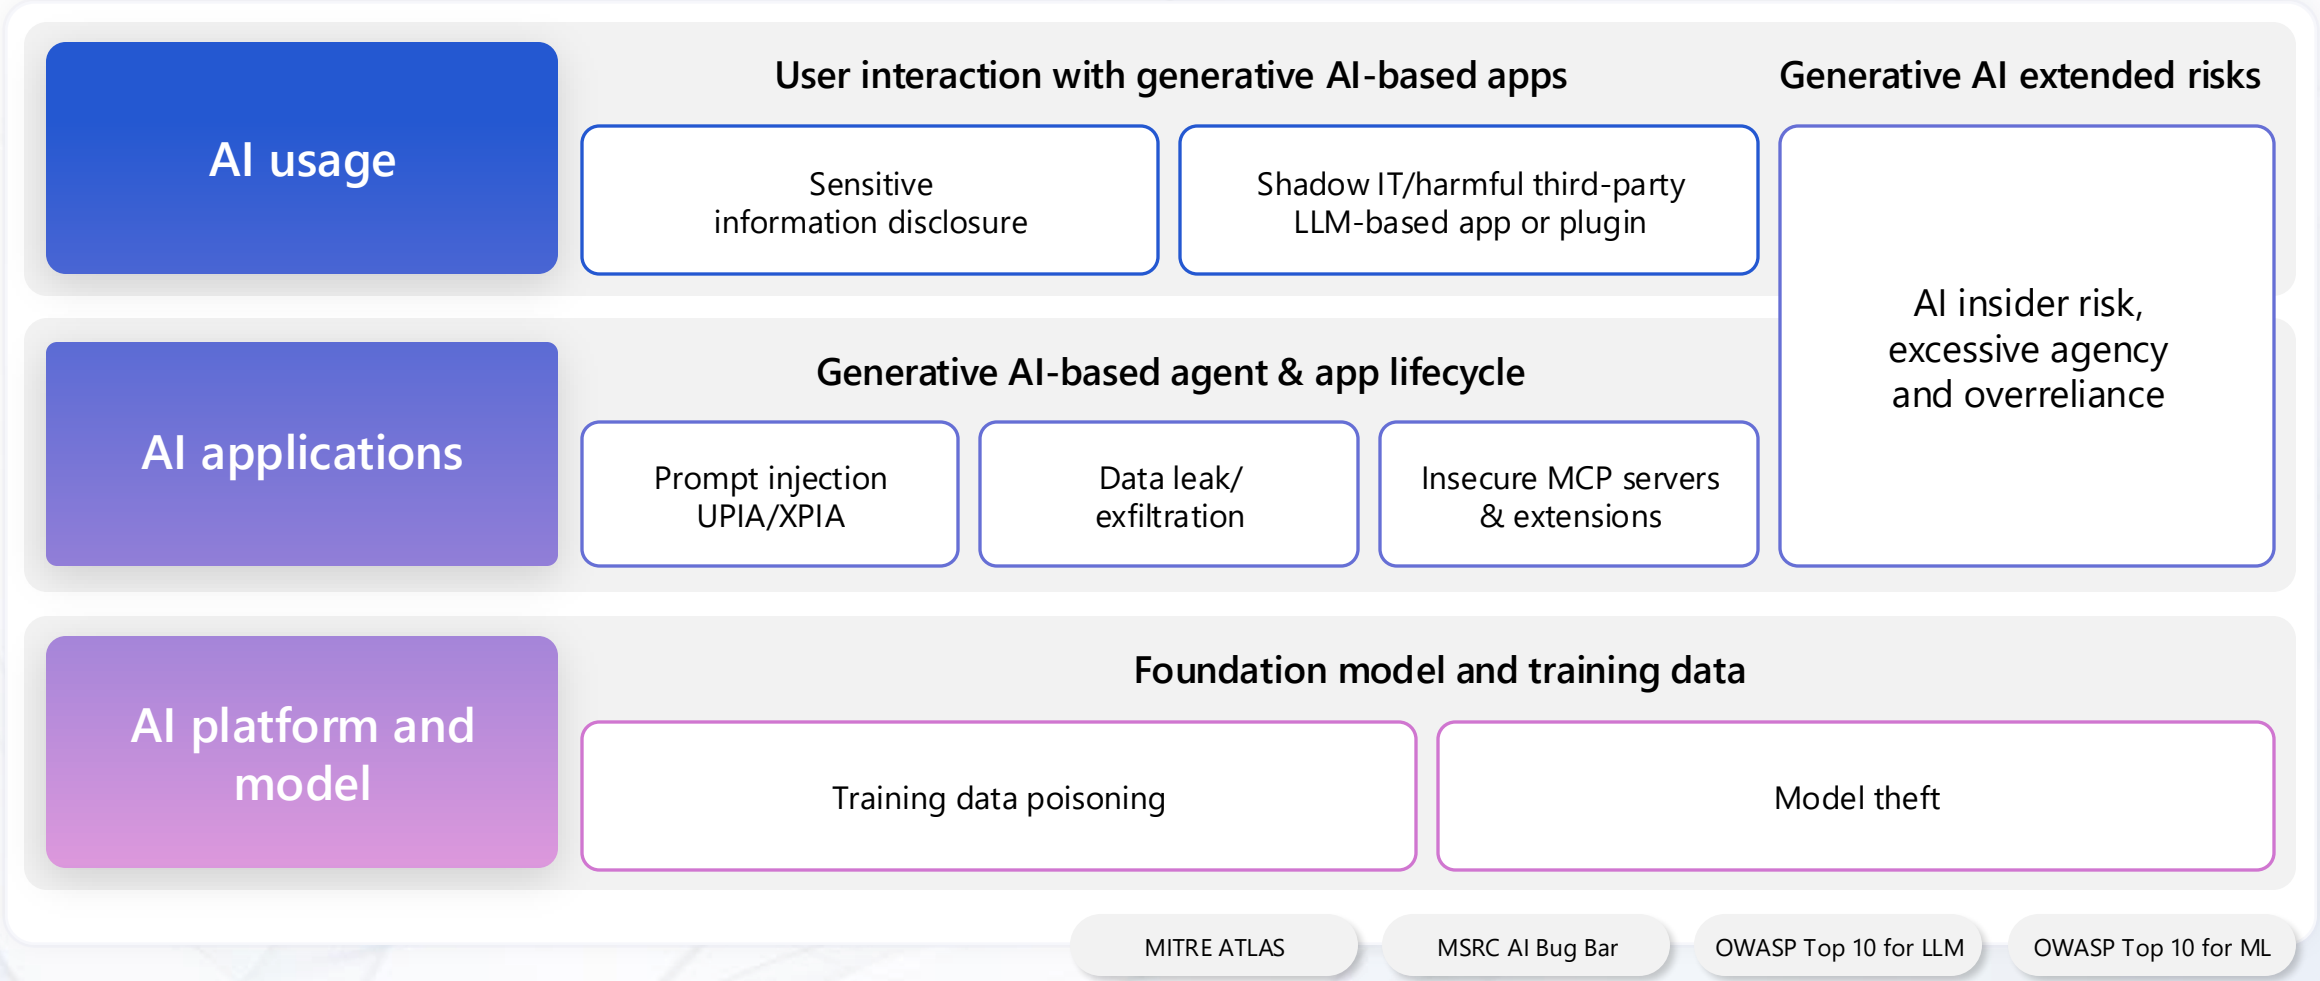

Regulatory compliance

55%

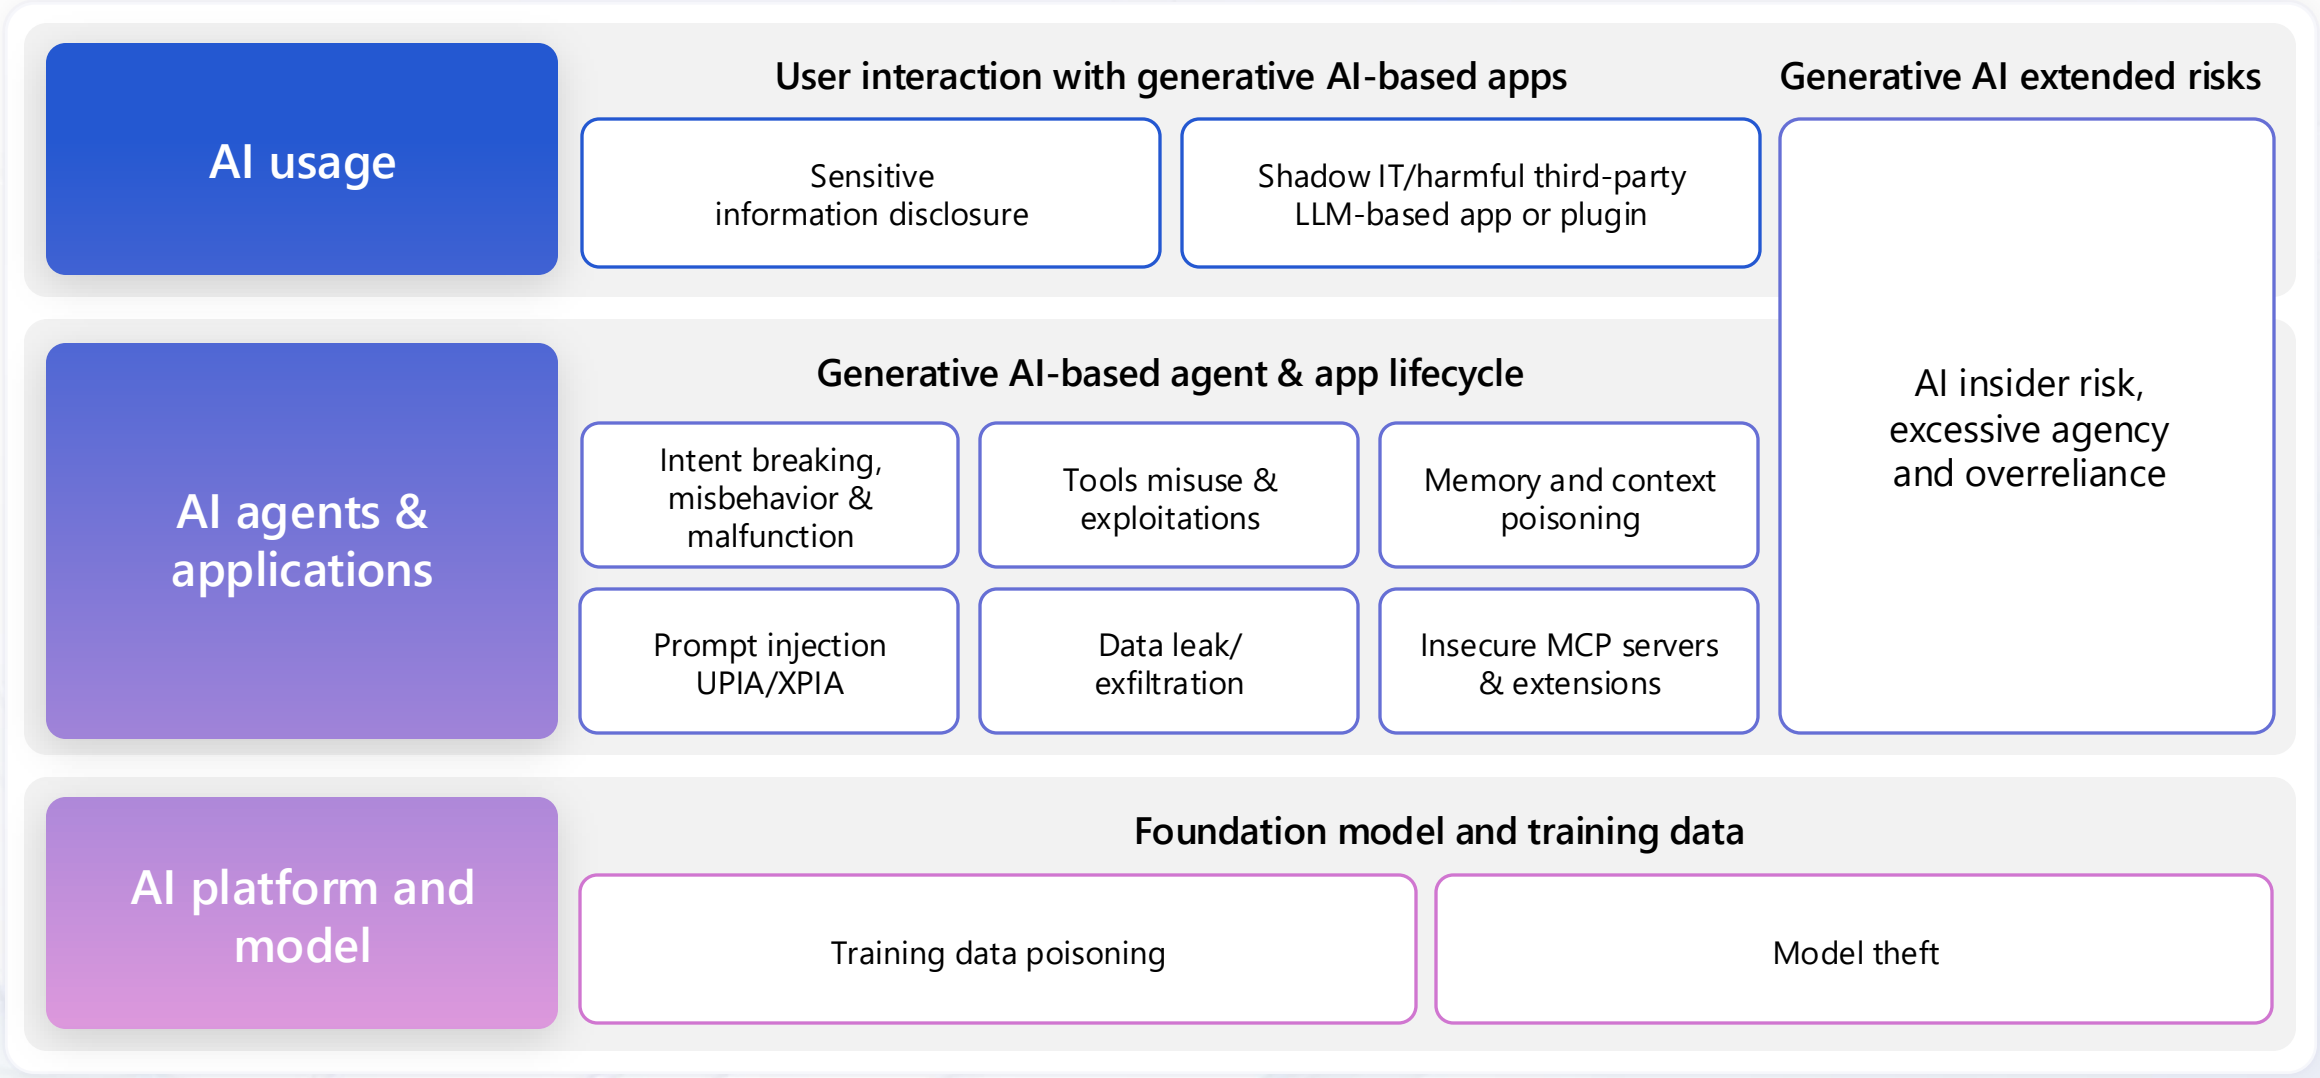

of leaders lack understanding of how AI is and will be regulated and are seeking guidance[1]

1. First Annual Generative AI study: Business Rewards vs. Security Risks, , Q3 2023, ISMG, N=400
2. How to Secure Custom-Built AI Agents, Gartner, 17 March 2025, Dionisio Zumerle, Jeremy D'Hoinne

Available with or without Teams

Microsoft 365 E7: The Frontier Worker Suite

		Microsoft 365 E5 (w/Teams)	Microsoft Entra Suite	Microsoft 365 Copilot	Microsoft Agent 365	Microsoft 365 E7 (w/Teams)
		$60[1]	$12[2]	$30	$15	$99[3]
Productivity	**Microsoft 365 apps:** Create and refine work across the apps people know and love	●				●
	OneDrive & SharePoint: Share, manage, and collaborate on content across teams	●				●
	Teams: Meet, chat, and call	●				●
	Windows: Secure, manage, and run work across enterprise devices	●				●
	Teams Phone: Cloud-based phone system built into Teams	●				●
	Power BI Pro: Turn data into shared, actionable insights	●				●
Security & Compliance	**Entra:** Identity and access management	● P2	● Suite			● Suite
	Defender: Endpoint, email, identity, and cloud threat protection	● P2				● P2
	Purview: Data security and compliance (ex. information protection, DLP, insider risk)	●				●
	Intune: Endpoint and device management	●				●
AI	**Copilot:** AI built into core productivity apps and Teams	○		●		●
	Copilot Studio & Agent Builder: Build, deploy, and scale custom AI agents	○ Metered		●		●
	Agent flexibility: Choose from pre-built agent library or access 3P marketplace			●		●
	Work IQ: AI grounded in personal and work data (incl. 3P data via connectors)	○		●		●
Agent Management	**Agent 365:** Observe, monitor and manage agents in real time				●	●
	Agent 365: Govern agents throughout their lifecycle				●	●
	Agent 365: Secure and protect all agents across your enterprise				●	●

1: As of 7/1/26, $51.45 w/o Teams | 2. $9 for E5 customers | 3. $90.45 w/o Teams

Mapping Agent 365 controls to the Zero Trust for AI framework

Implement Zero Trust strategy for secure AI adoption

Verify explicitly

- Verify all identities accessing AI applications
- Assess all applications used, deployed, and developed
- Ensure intended and unwanted activities are defined and detectable

Use least privilege access

- Ensure AI can only access data required for intended uses by authorized users
- Ensure AI agents have the least privilege to take intended actions

Assume breach

- Assume each prompt can have malicious intent
- Assume each response can leak data
- Assume every AI component can have vulnerabilities

Extend Zero Trust strategy to secure and govern AI

Security Modernization with Zero Trust Principles

Microsoft

Business Enablement
Align security to the organization's mission, priorities, risks, and processes

Security Strategy and Program

Assume Breach (Assume Compromise)
Assume attackers can and will successfully attack anything (identity, network, device, app, infrastructure, etc.) and plan accordingly

Verify Explicitly
Protect assets against attacker control by explicitly validating that all trust and security decisions use all relevant available information and telemetry.

Use least privilege access
Limit access of a potentially compromised asset, typically with just-in-time and just-enough-access (JIT/JEA) and risk-based polices like adaptive access control.

Zero Trust Pillars

Identity | Devices | Data | Network | Security Operations | Infrastructure

Monitor and manage agents in real time

Govern

Govern agents throughout their lifecycle

Secure

Protect agents comprehensively

Microsoft security infrastructure extended to AI Agents

Secure agents. Secure Foundations.

Secure identities

Protect access to resources for users and agents

Protect your data

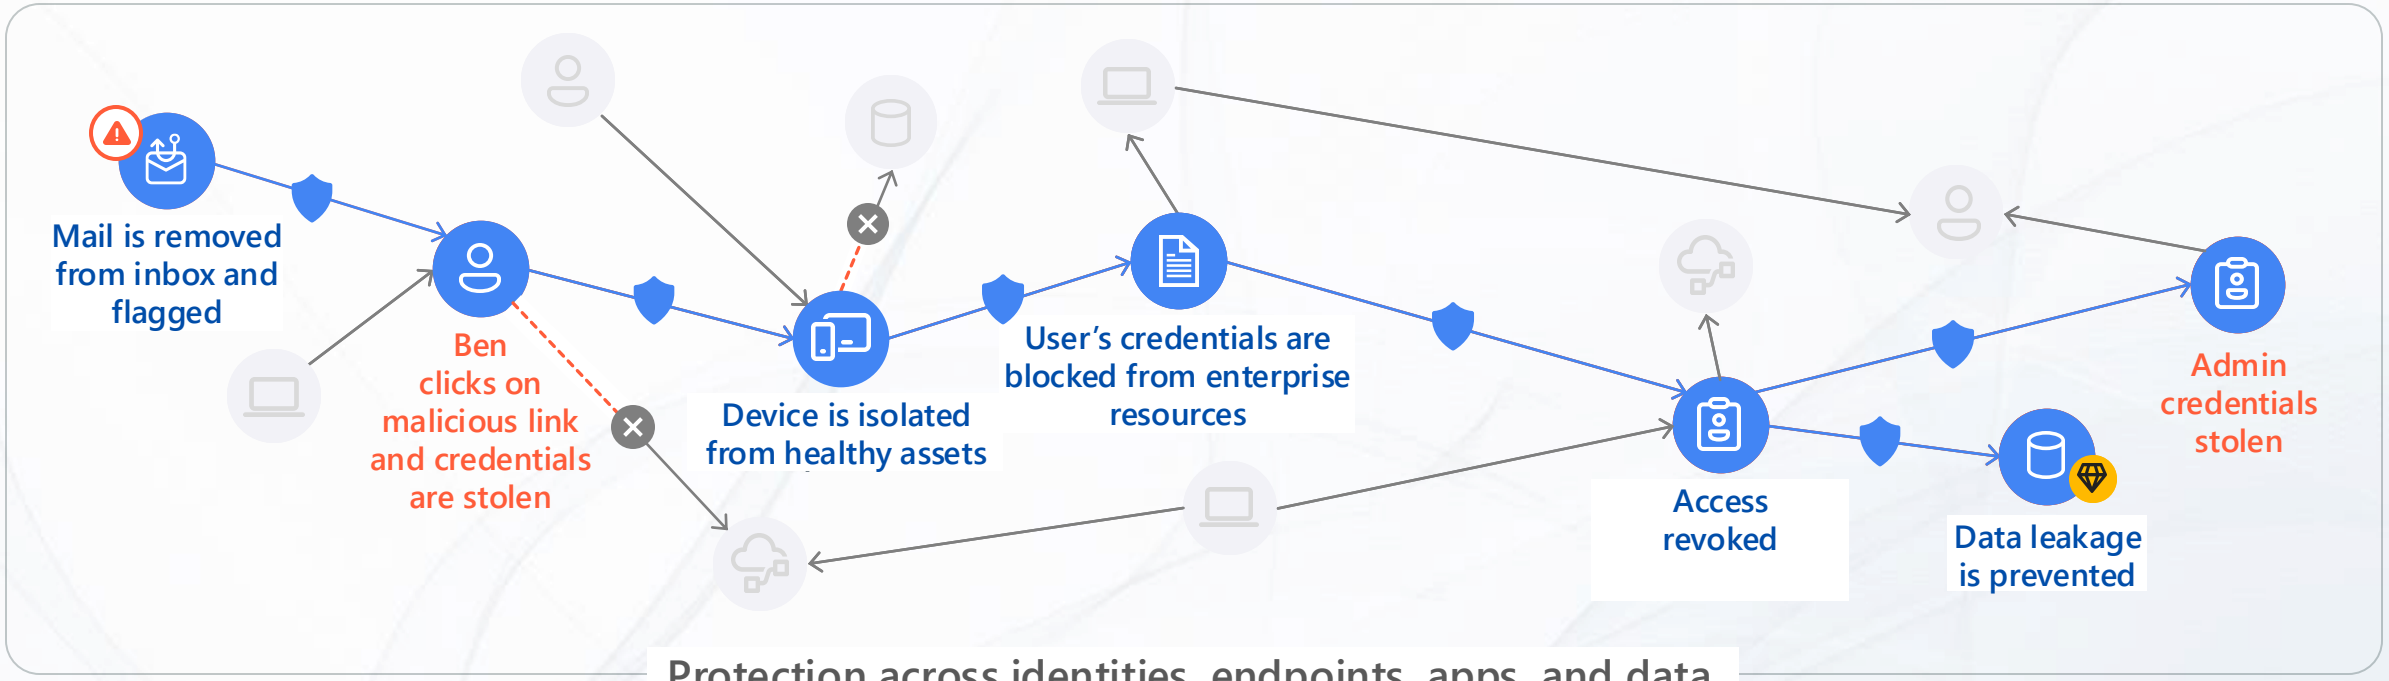

Mitigate data security risks

Defend against threats

Simplify SecOps and enable proactive defense

Microsoft AI-first end-to-end security

Protect users across identities, endpoints, apps, emails, and data

Protection across identities, endpoints, apps, and data.

Email | Device | Apps | Cloud | Data

The best way to manage agents is to extend infrastructure you use for managing users.

Microsoft 365 Admin Center

Centralized hub to manage users, apps, and settings securely across your Microsoft 365 environment.

Microsoft Entra

Protect agent identities, and secure their access to any app or resource, from anywhere.

Microsoft Purview

Manage, protect and govern data that agents use and create across your entire organization.

Microsoft Defender

Extend comprehensive security posture and advanced threat protection to agents.

Microsoft Entra Agent ID

Authentication	Authorization	Identity Protection	Access Governance	Visibility
Available now	Available now	Coming soon	Coming soon	Coming soon
Microsoft Foundry	Copilot Studio	Security Copilot	Microsoft 365 Copilot	Third-party

Manage agent identities and lifecycle

Secure and govern agents' access to resources

Deploy out of the box with Copilot Studio and Foundry

For AI Agents

Microsoft Entra Agent ID

Shared platform capabilities

Data Map, Data Classification, Data Labels, Audit, Data Connectors

Note: *Some capabilities shown go beyond Microsoft 365 E5 and may require additional licenses.*

For AI Agents

Microsoft Purview

Data security and compliance for AI agents

Observe agent risk

- AI Observability in DSPM
- Insider Risk Management for Agents

Protect sensitive data

- Purview protections for agent interactions
- Support for Agent ID

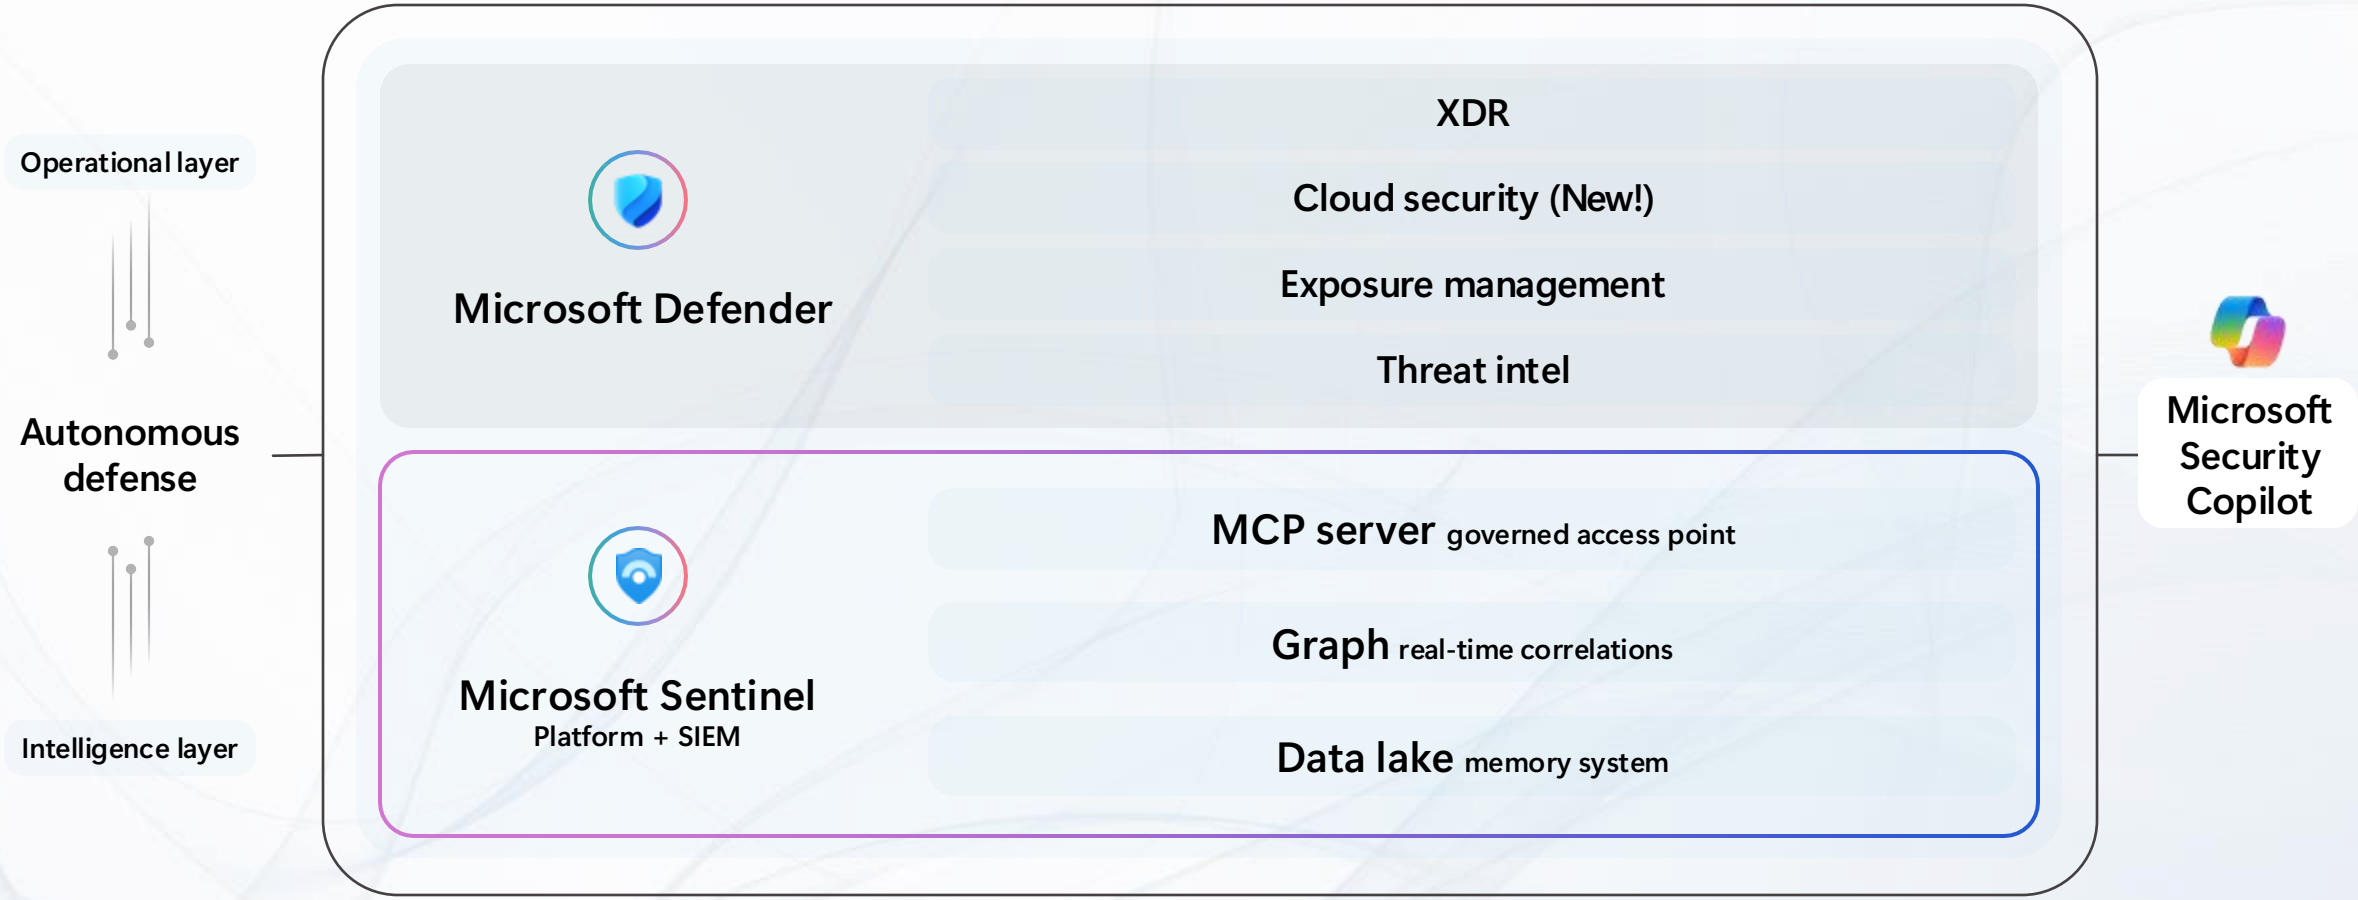

Maintain compliance

- Compliance controls extended to agents

aka.ms/PurviewforAgents

Microsoft Defender XDR

A platform built for autonomous defense and agentic AI

For AI Agents

Microsoft Defender XDR

Security posture and threat protection for AI agents

Prevent threats	Detect threats	Investigate & respond
• Runtime protection • Security posture management • Attack path analysis	• OOTB threat detections • Ability to create custom detections	• Agent inventory • Incident investigation • Threat hunting

aka.ms/Defender-S4AI-Ignite-2025

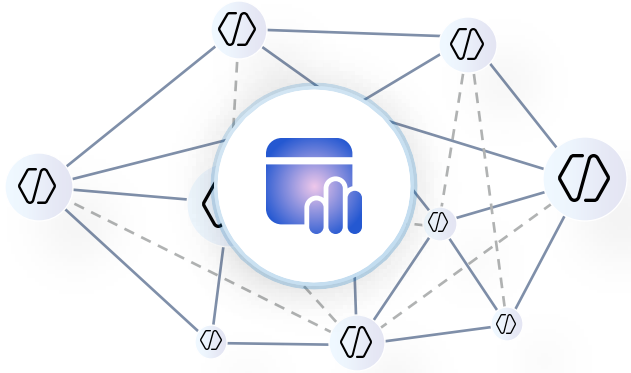

Module 2

Observe — real-time control for agents

Microsoft Agent 365

The control plane for agents

Observe

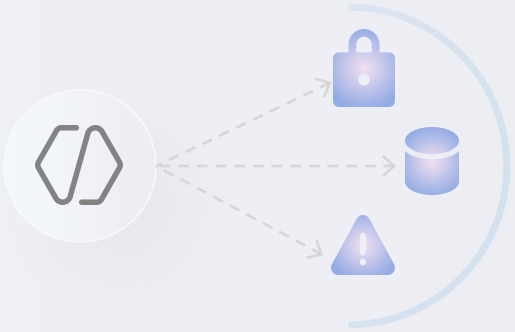

Monitor and manage agents in real time

Govern

Govern agents throughout their lifecycle

Secure

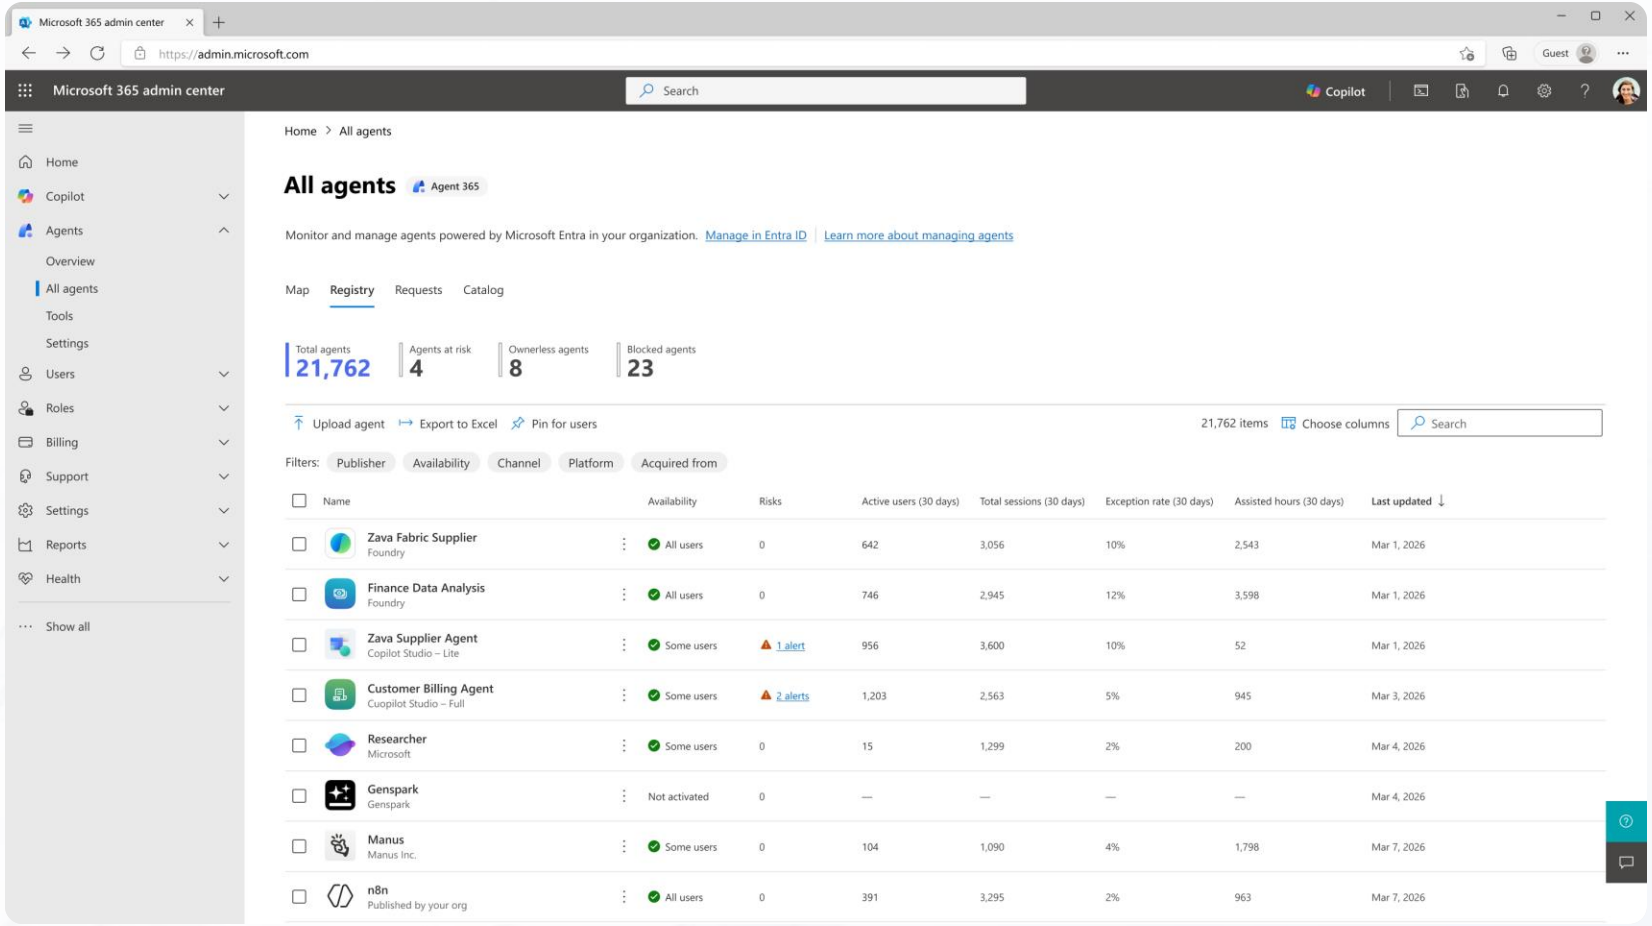

Protect all agents comprehensively

Observe

Generally available May 2026

Register and track agents in one place

Get a complete view of all agents in your organization, including agents built with Microsoft AI platforms, agents from our ecosystem partners, and any agents you register yourself.

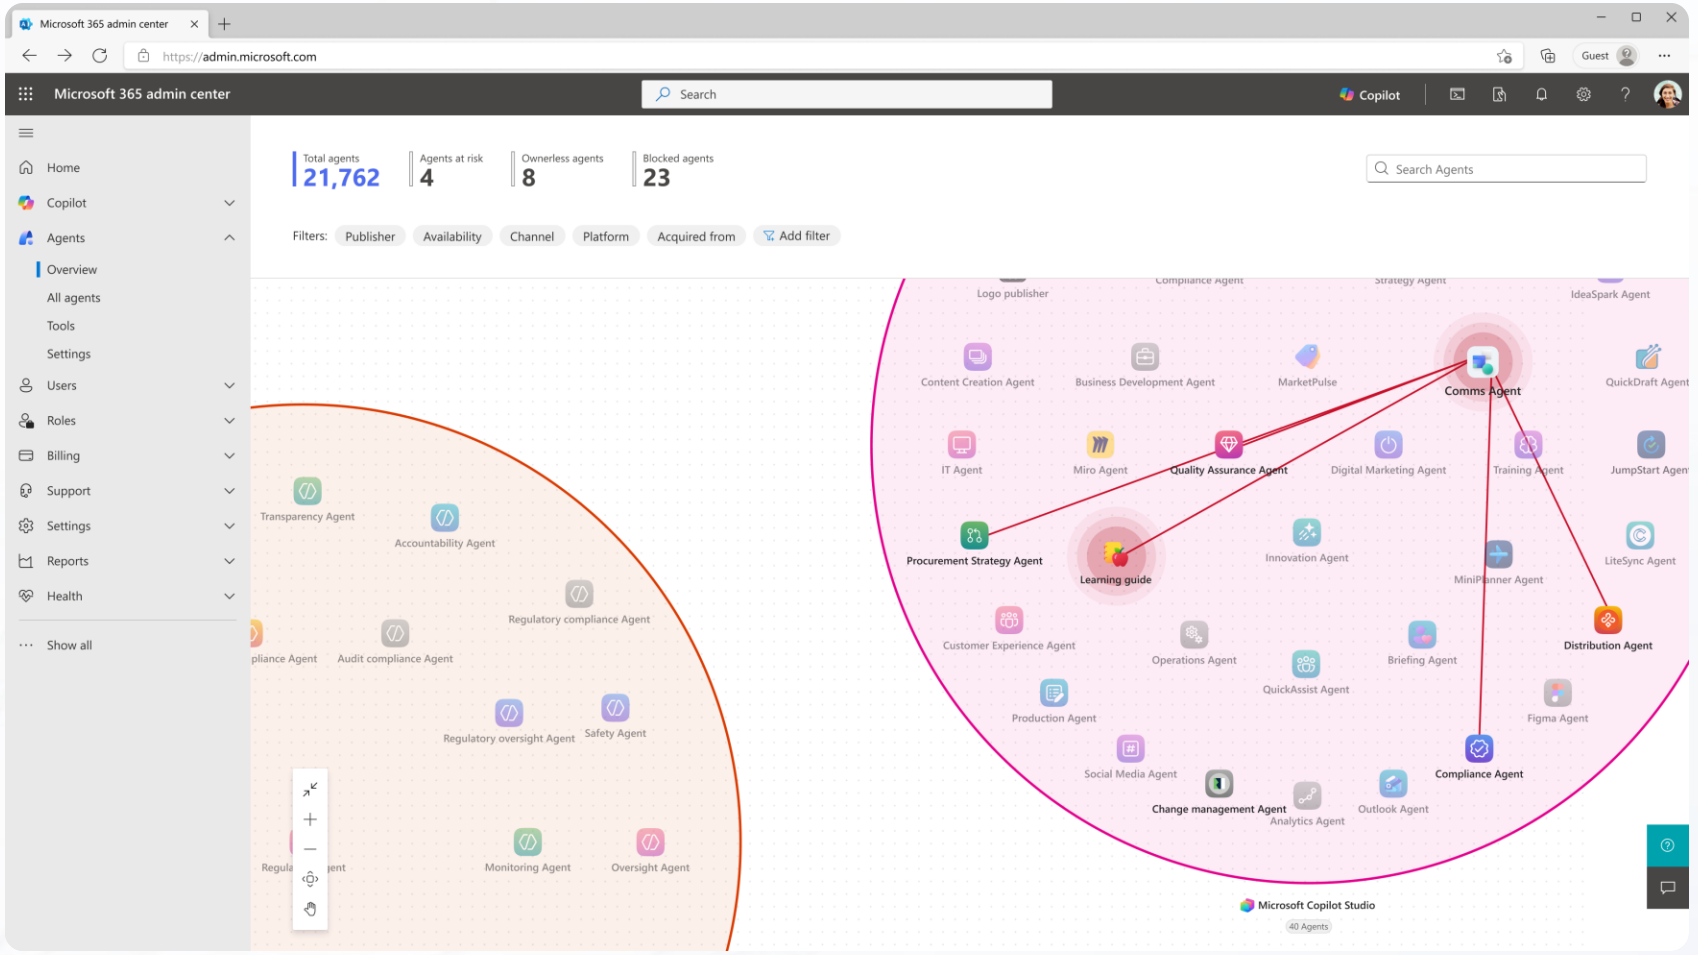

Supported agent types/platforms: Copilot Studio agents published to M365/Teams, Agent Builder, SharePoint, Microsoft 365 Agent Toolkit, 3P through Agent 365 SDK, Productivity App agents (Word, PPT, etc.), Microsoft agents (e.g. Career Coach, Researcher, etc.), Foundry

Observe

Generally available May 2026

Visualize agent usage and behavior

See how agents fit into the broader ecosystem, connect with other agents, and perform over time to simplify monitoring and accelerate issue identification.

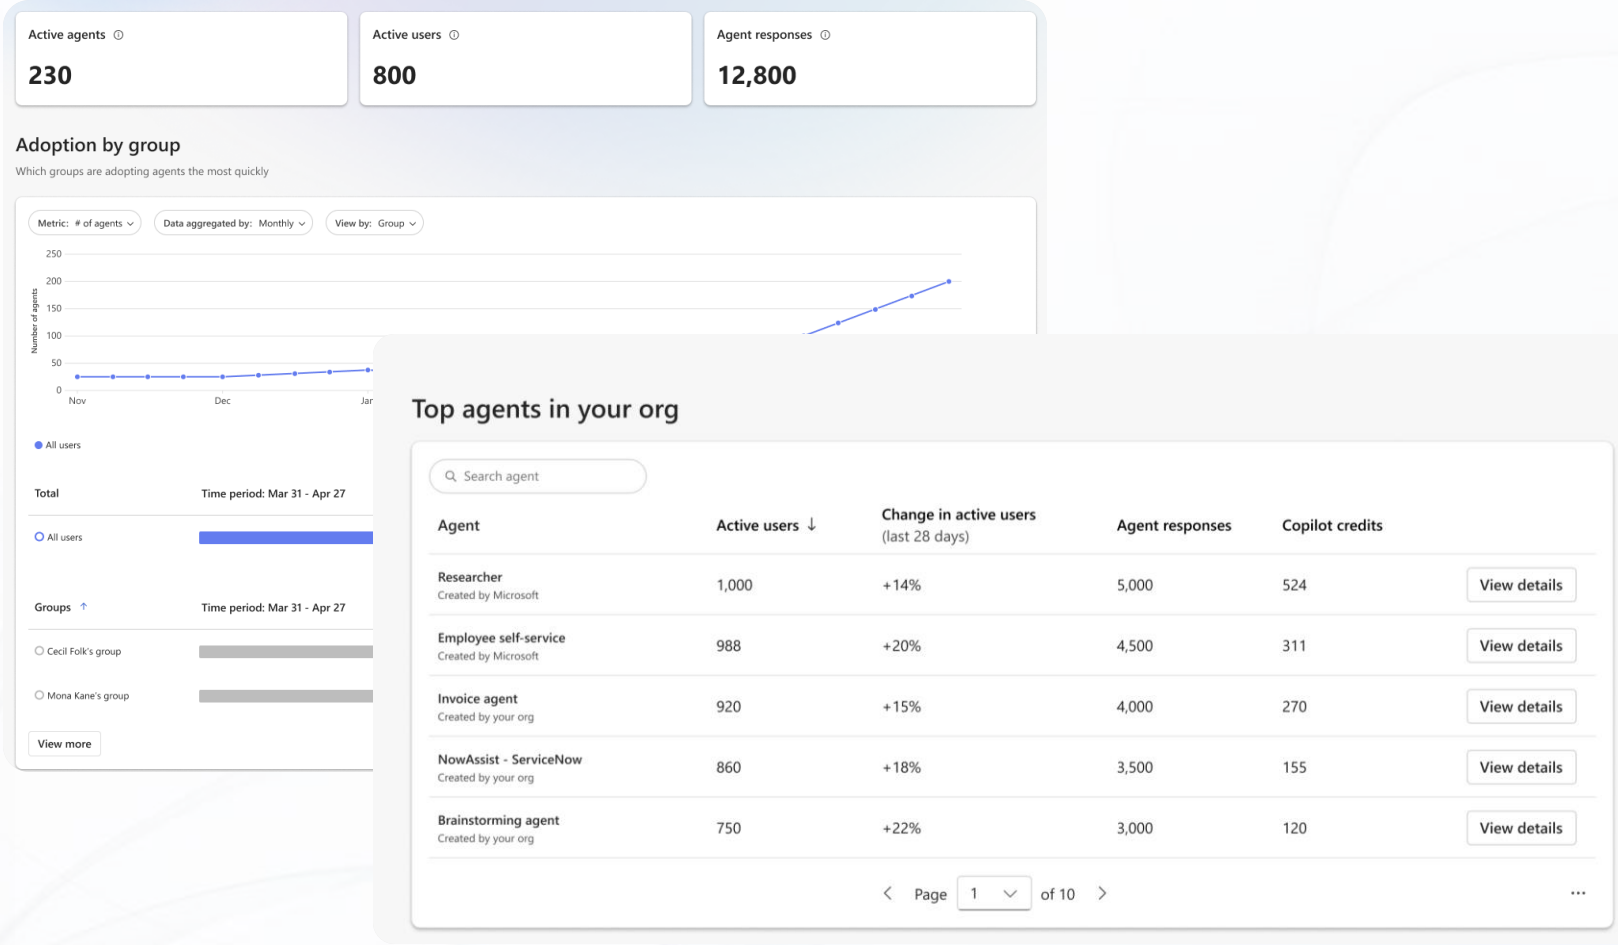

Observe

Generally available May 2026

Measure agent effectiveness

Track key agent metrics, including adoption, quality, performance, speed of task completion and impact to make more informed decisions.

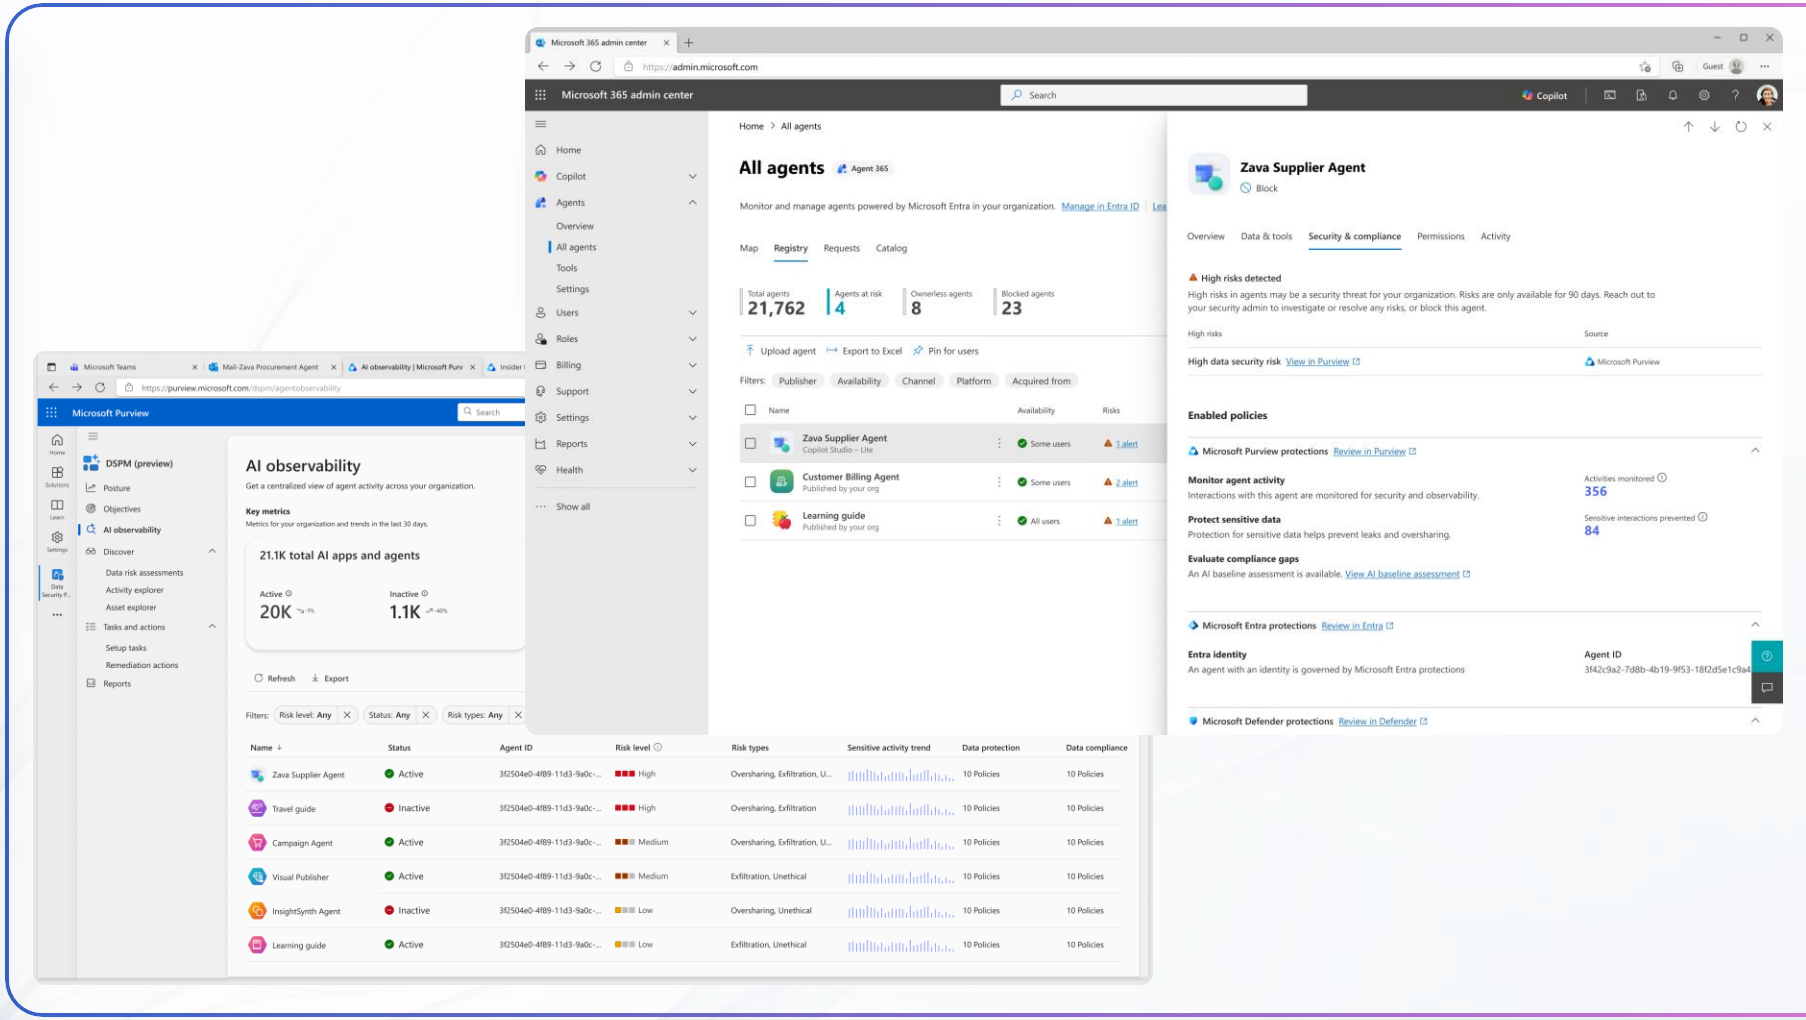

Observe

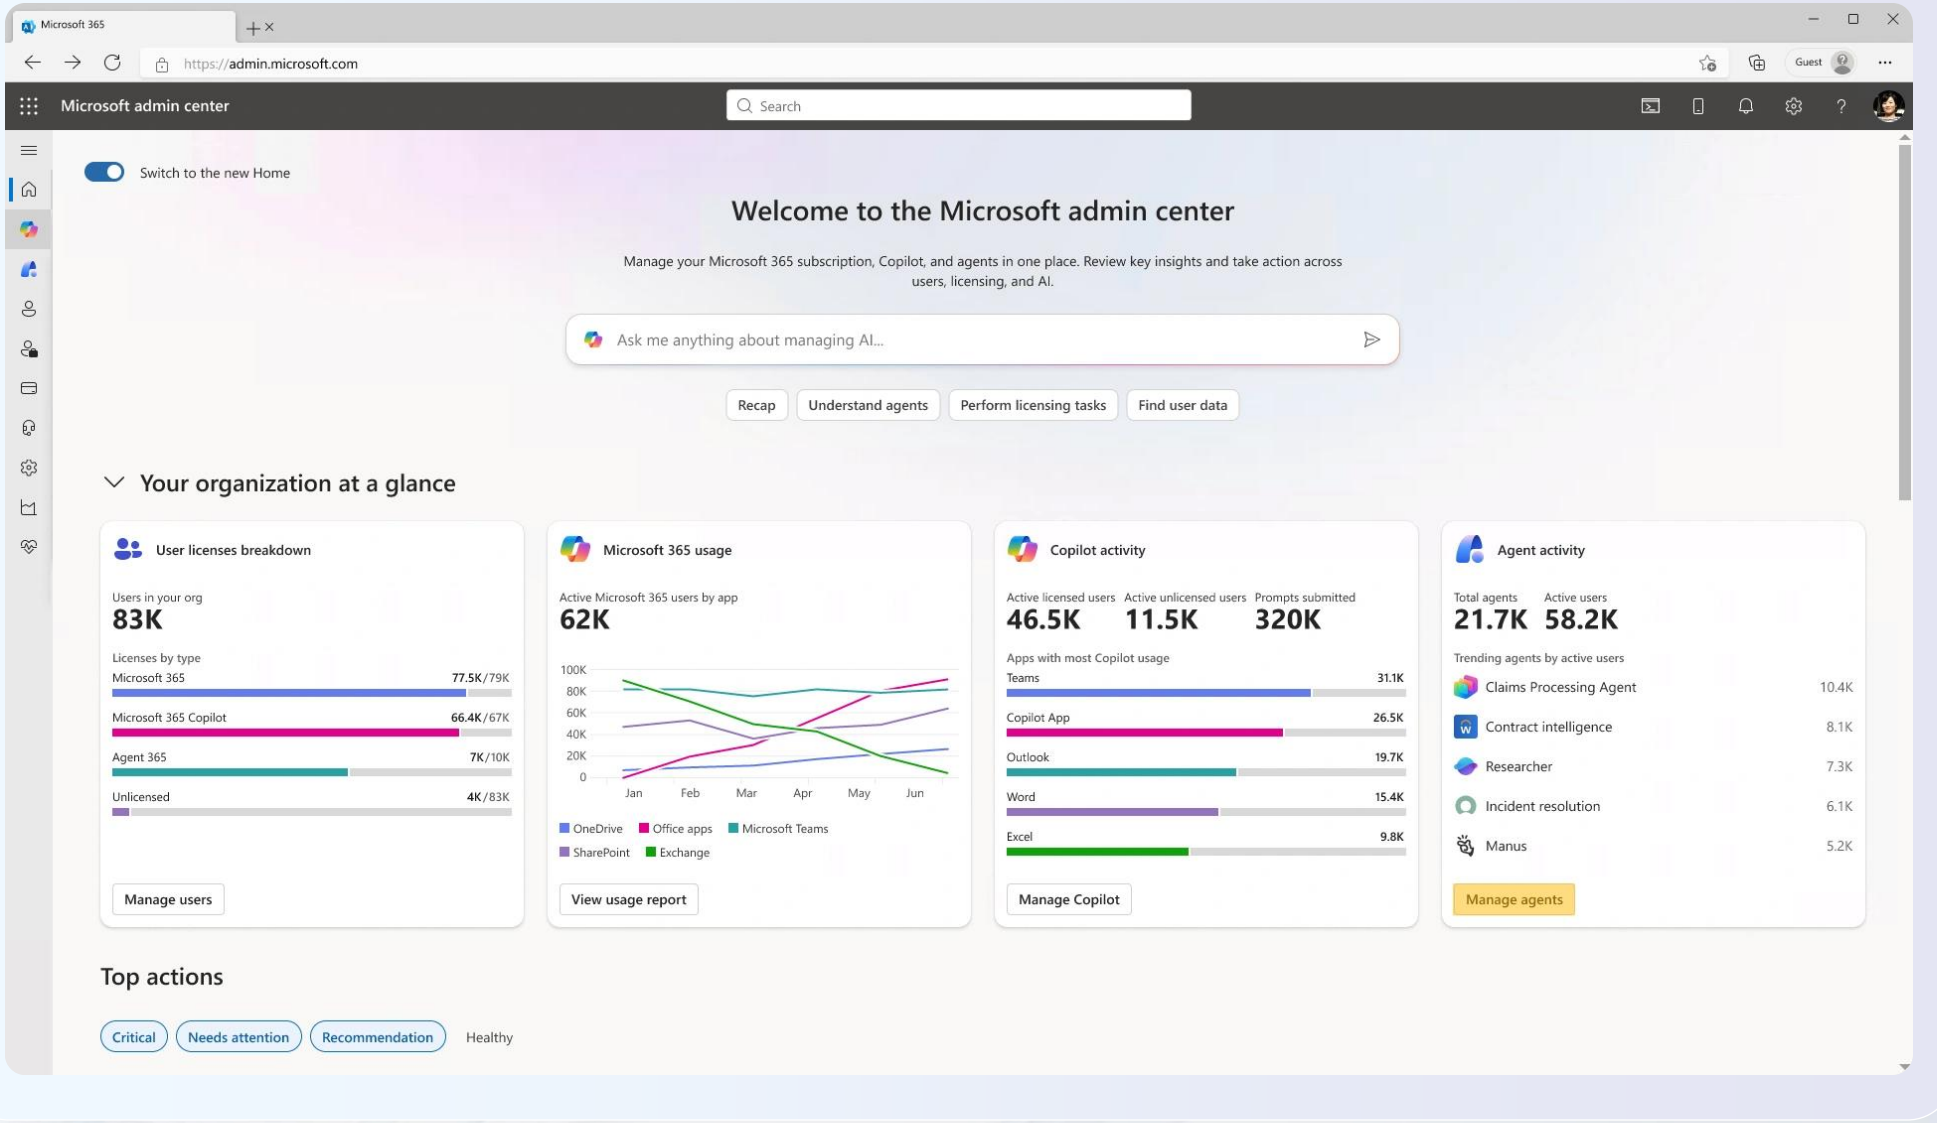

Generally available May 2026

Extend oversight with role-based reporting

Build extended visibility across your organization through role-based reporting for Security leaders to manage agent risks and Business leaders to monitor business metrics and impact.

Demo: Observe agents and prevent sprawl

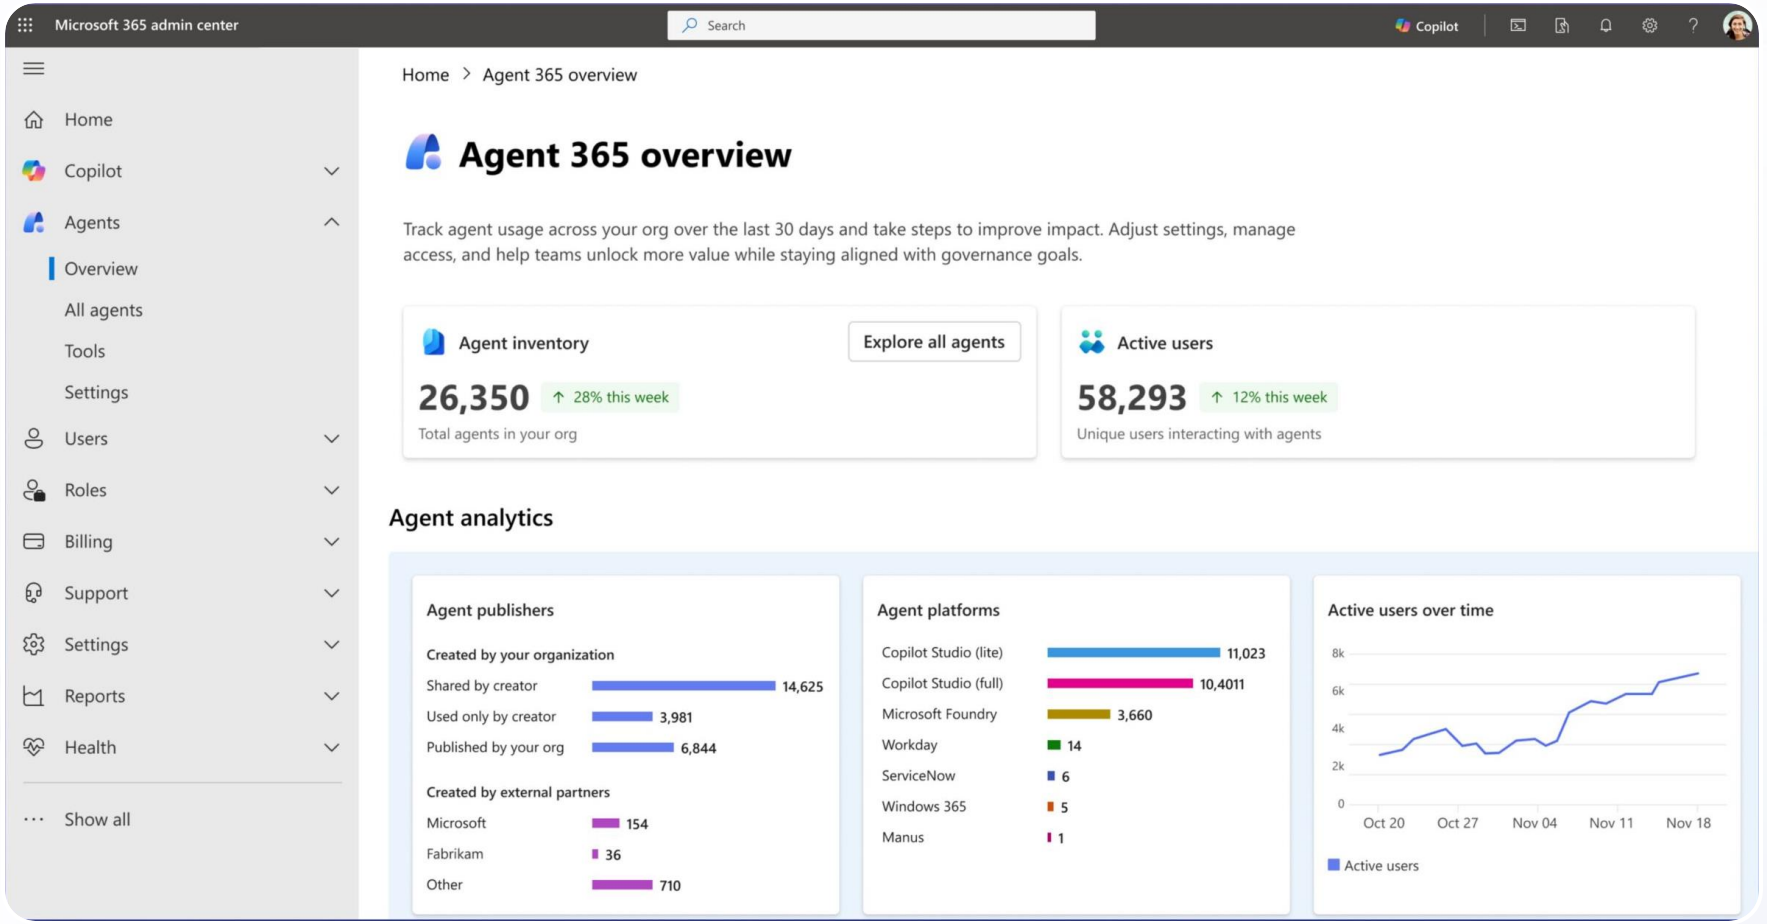

Discover and inventory agents across your organization

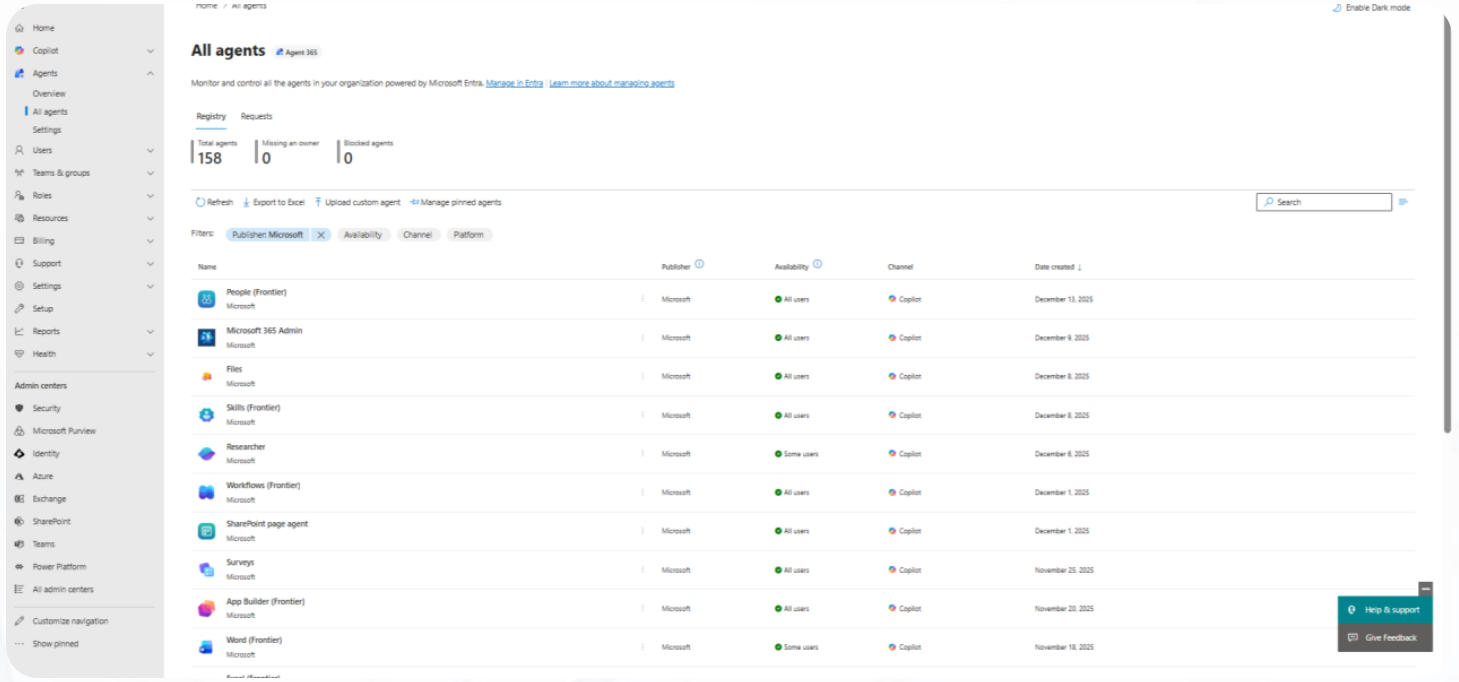

Agent 365 Overview page in the Microsoft 365 admin center

Serves as the control plane for all agents and provides IT administrators with a centralized dashboard to:

- **Track agent adoption and usage trends**
- **Identify alerts and governance gaps**
- **Enable visibility and control across all agents in the tenant**

Key Features of Overview page

Provides a **snapshot of agent health** and actionable insights for the last 30 days.

Highlights critical actions for administrators.

Surfaces governance signals to maintain compliance and reduce risk.

Enable quick navigation to All agent pages.

Hero metrics for agent adoption and impact

Active users

The number of unique users who interacted with at least one agent within last 30 days

Total sessions

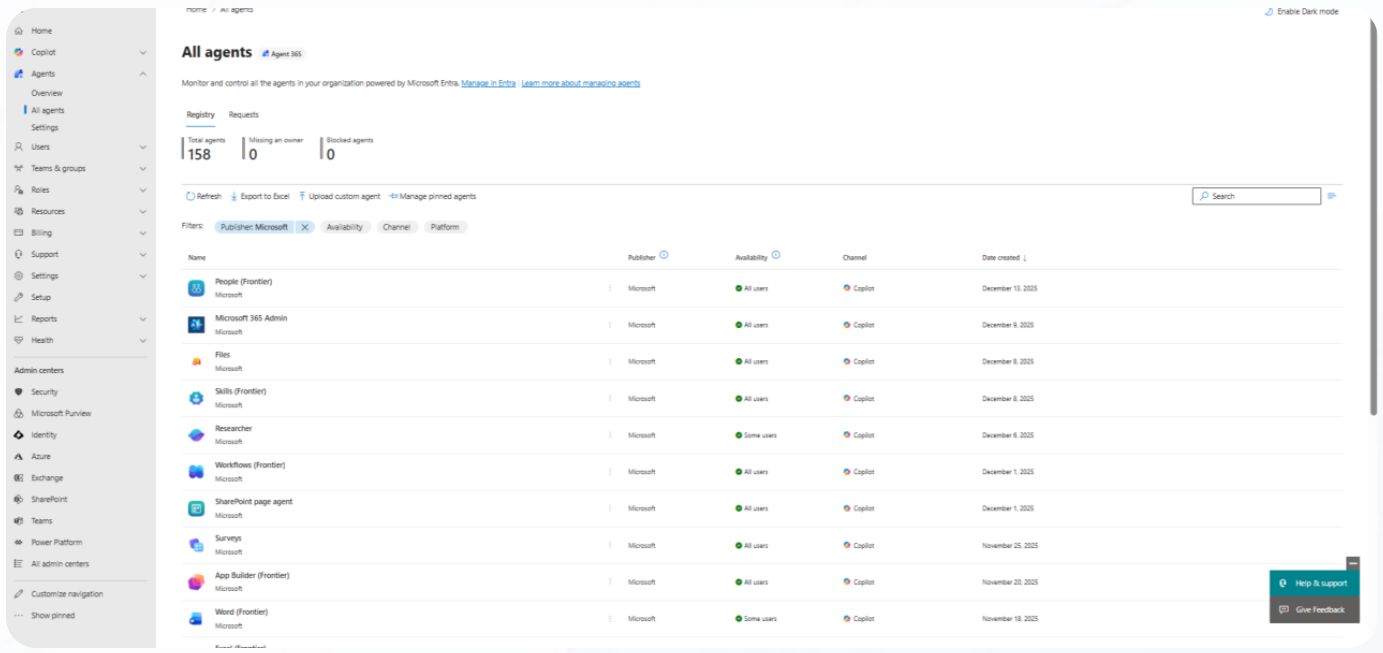

The count of complete agent invocations during the past 30 days.

Exception rate

Percentage of agent sessions in the last 30 days that completed without errors

Agent Runtime

Total agent assisted time over the past 30 days

Navigate via **Explore All agents > Registry**

Agent Analytics

Detailed insights into how agents are distributed and used, helping administrators understand adoption patterns and optimize resources.

Analytics View	What It Shows
Agents by Publishers	Breakdown of all agents by publisher source: created by your organization or created by external partners
Agents by Platforms	Platforms used to build agents, such as Agent Builder in M365 Copilot, Copilot Studio, Microsoft Foundry, or external partner platforms
Active Users Over Time	Daily active user engagement trend for the past 30 days, highlighting adoption momentum

Top governance actions for administrators

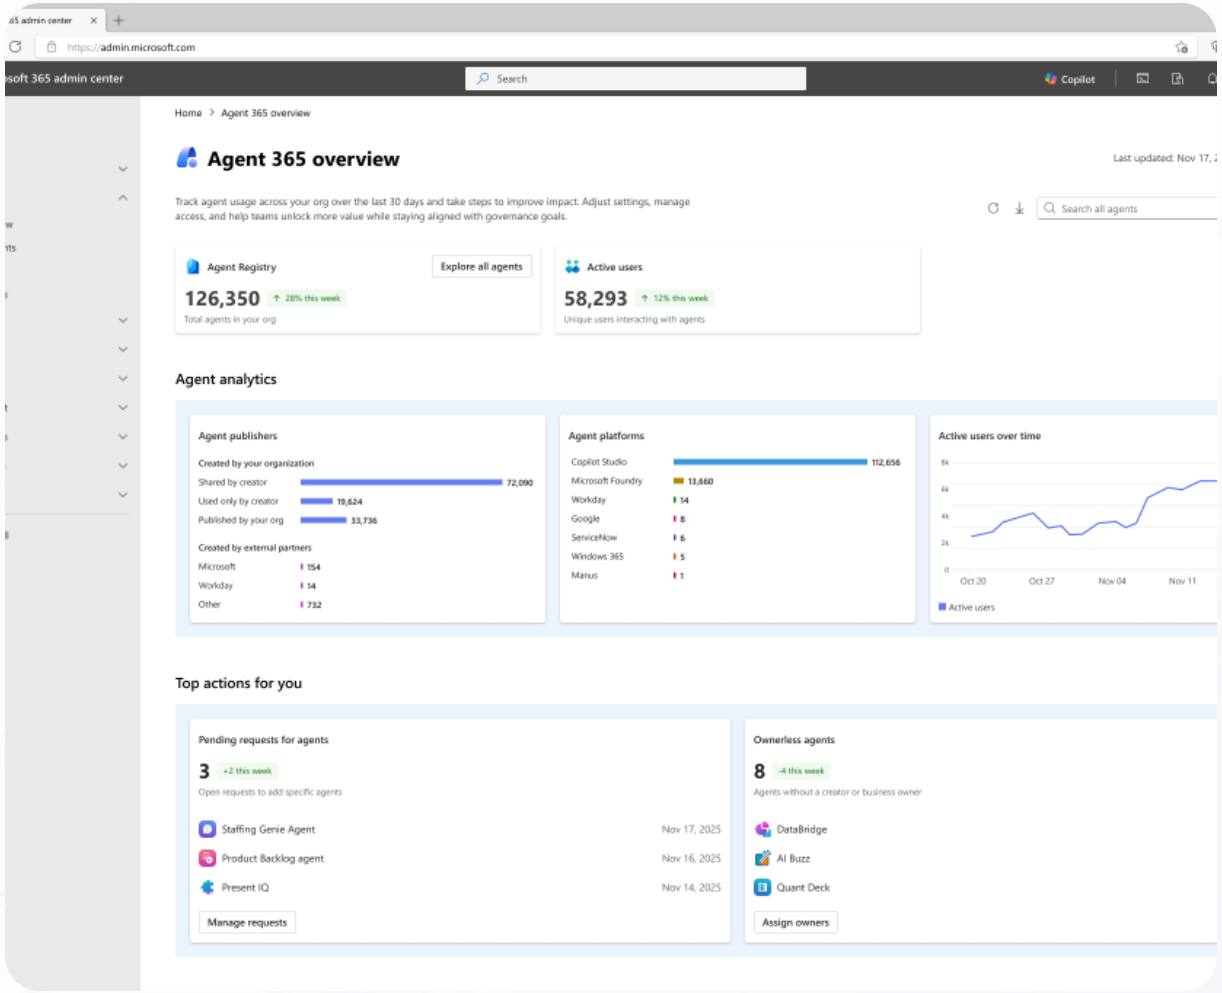

Top actions for you

Pending Requests for Agents

- Total agent requests awaiting admin approval — last 30 days
- Displays three oldest pending requests
- Week-over-week change indicator

Ownerless Agents

- Total agents without an assigned owner

Agent Registry in the Microsoft 365 admin center

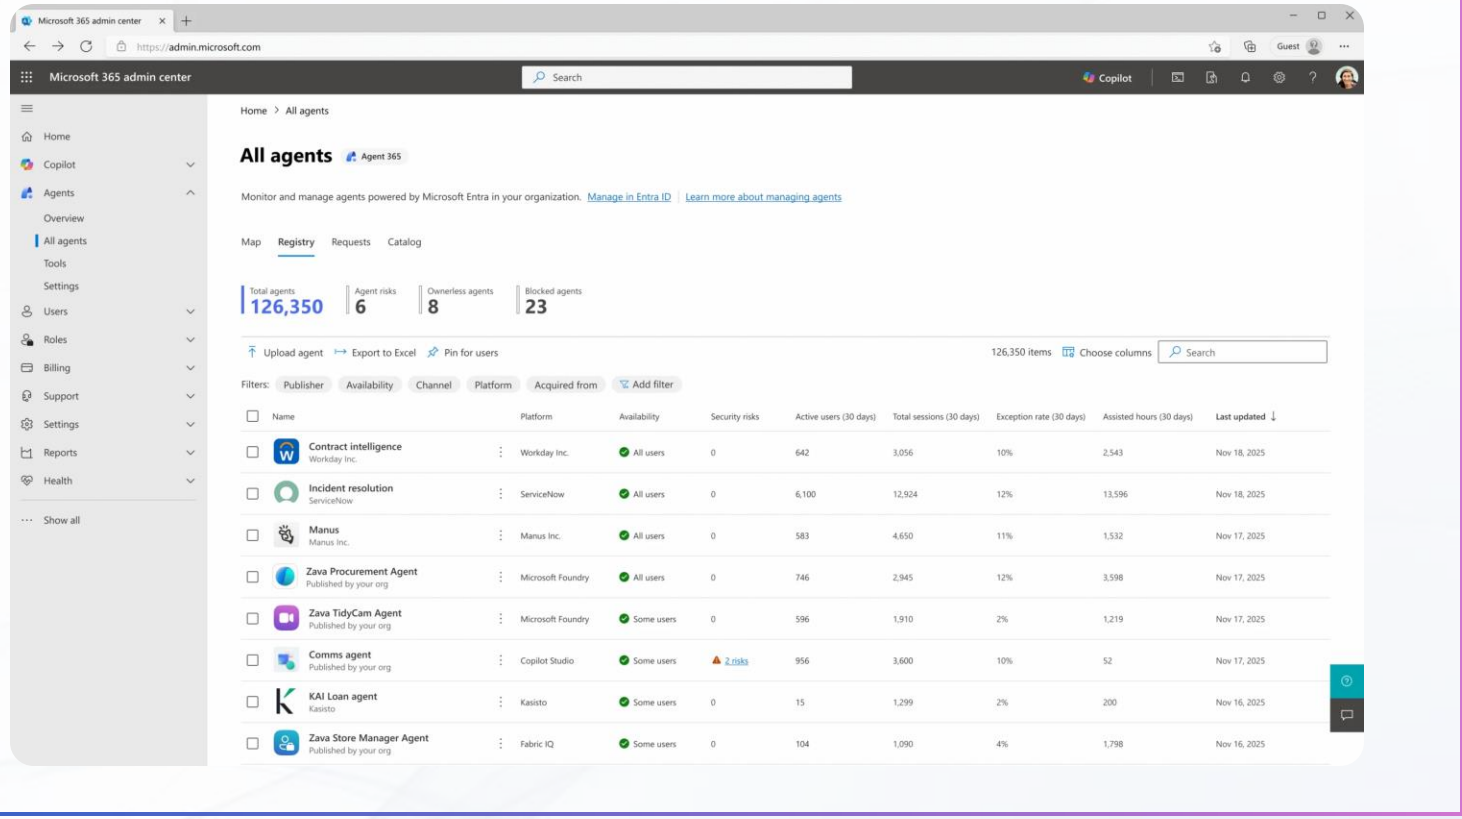

A centralized view of all agents in your organization — enabling administrators to monitor, manage, and govern agents effectively.

01 Agent Inventory & Types

02 Ownerless Agent Management

03 Risks & Alerts

04 Programmatic Access to Agent Registry (Preview)

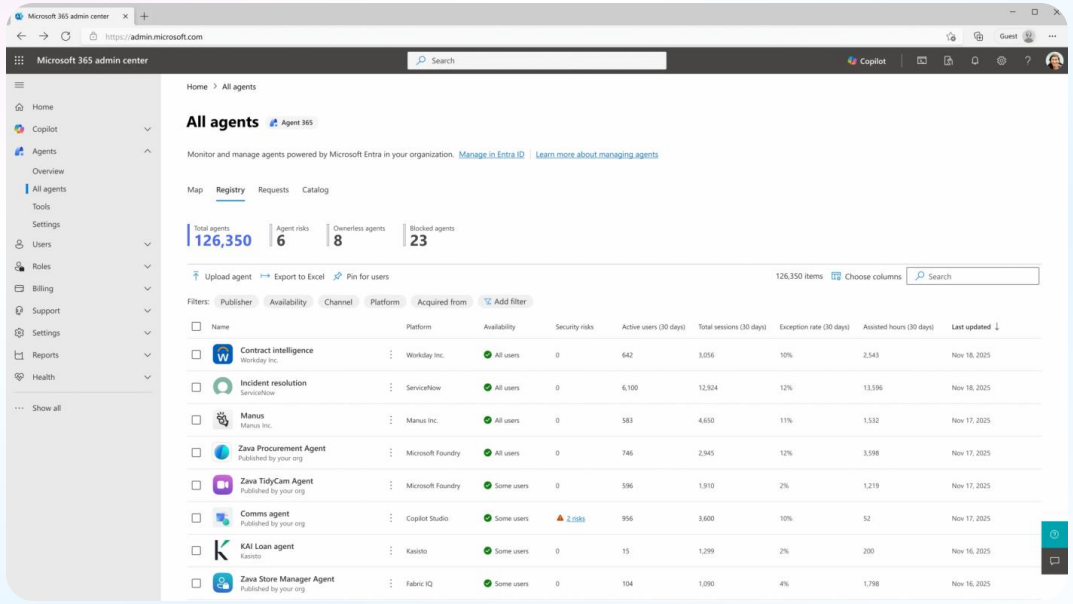

Agent inventory

Agents integrated with Microsoft 365 Copilot

Microsoft 365 Copilot

Microsoft agents - Built and maintained by **Microsoft.**

External partner-built agents - Provided by trusted non-Microsoft developers.

Shared by creator - Created and shared by individual users or developers in your org.

Published by your org - Custom agents **approved and published** for broader use.

Risks & Alerts

The Risks column in the Agent Registry provides consolidated security visibility per agent

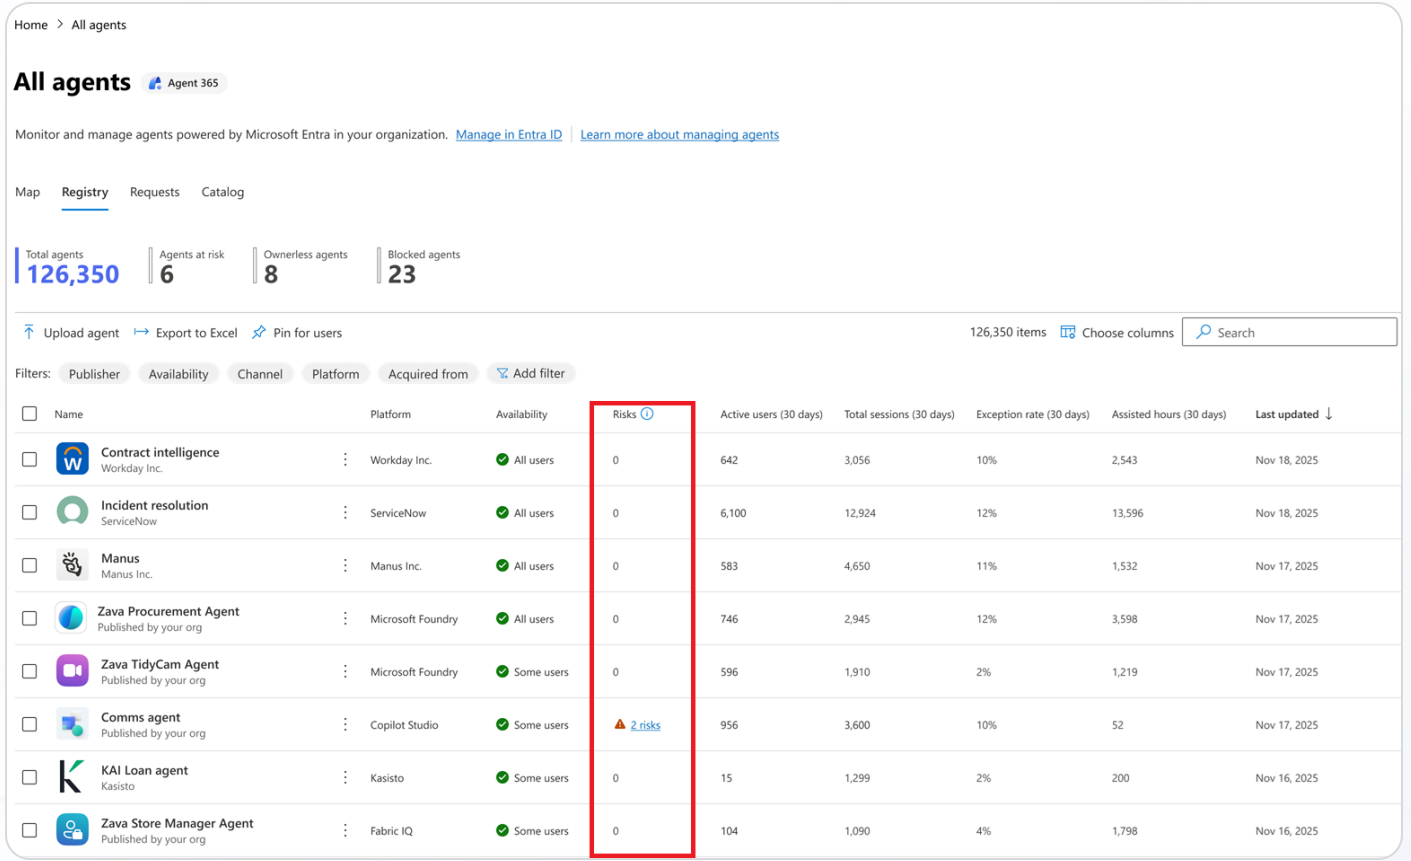

Displays total count of active high-severity alerts for each agent and its instances

Alerts currently sourced from Microsoft Entra and expanding to Purview and Defender

Blank value = no active alerts

Non-zero count = agents requiring immediate attention

Select the count to access a detailed flyout under the Security & Compliance tab

Ownerless Agent Management

Shared agents can become ownerless when the user who created them is deleted from the organization.

Ownerless agent count

Total agents without a valid owner, visible directly from the dashboard

One-click filter

Instantly isolates ownerless agents in the inventory for triage

Real-time updates

Count automatically updates when a user is hard deleted

Available actions

Block or delete affected agents to resolve ownership gaps

Programmatic Access to Agent Registry (Preview)

Agent inventory data is available programmatically through Microsoft Graph API — enabling automated governance at scale.

Integrate the following tasks into existing workflows across agents

- Automate bulk agent management.
- Streamline onboarding.
- Integrate governance.

01 Get all agents in your inventory

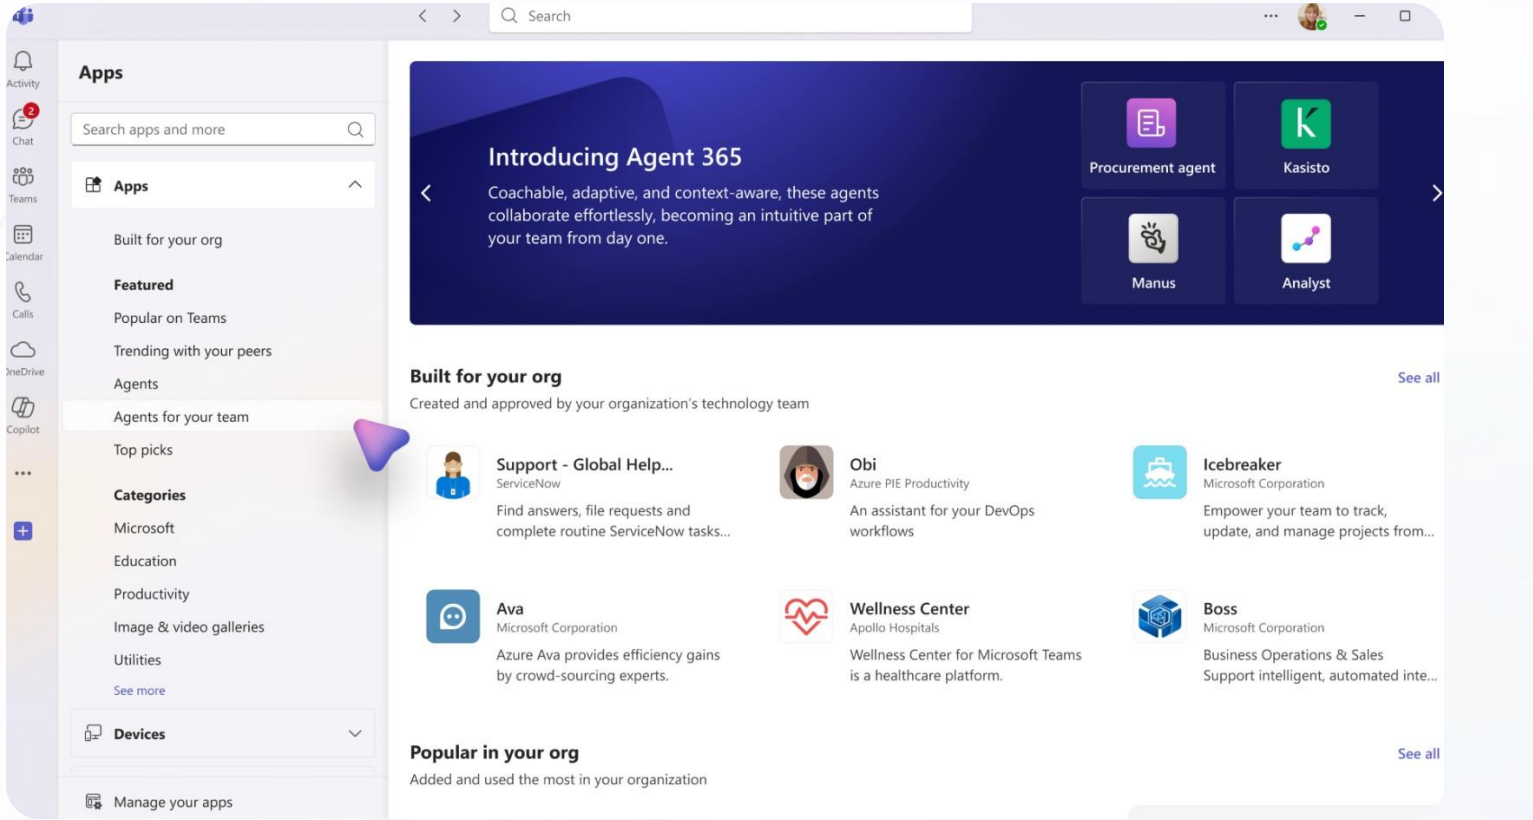

02 Get details of a particular agent in your inventory

Discover Agent Templates

Discover Agent Templates

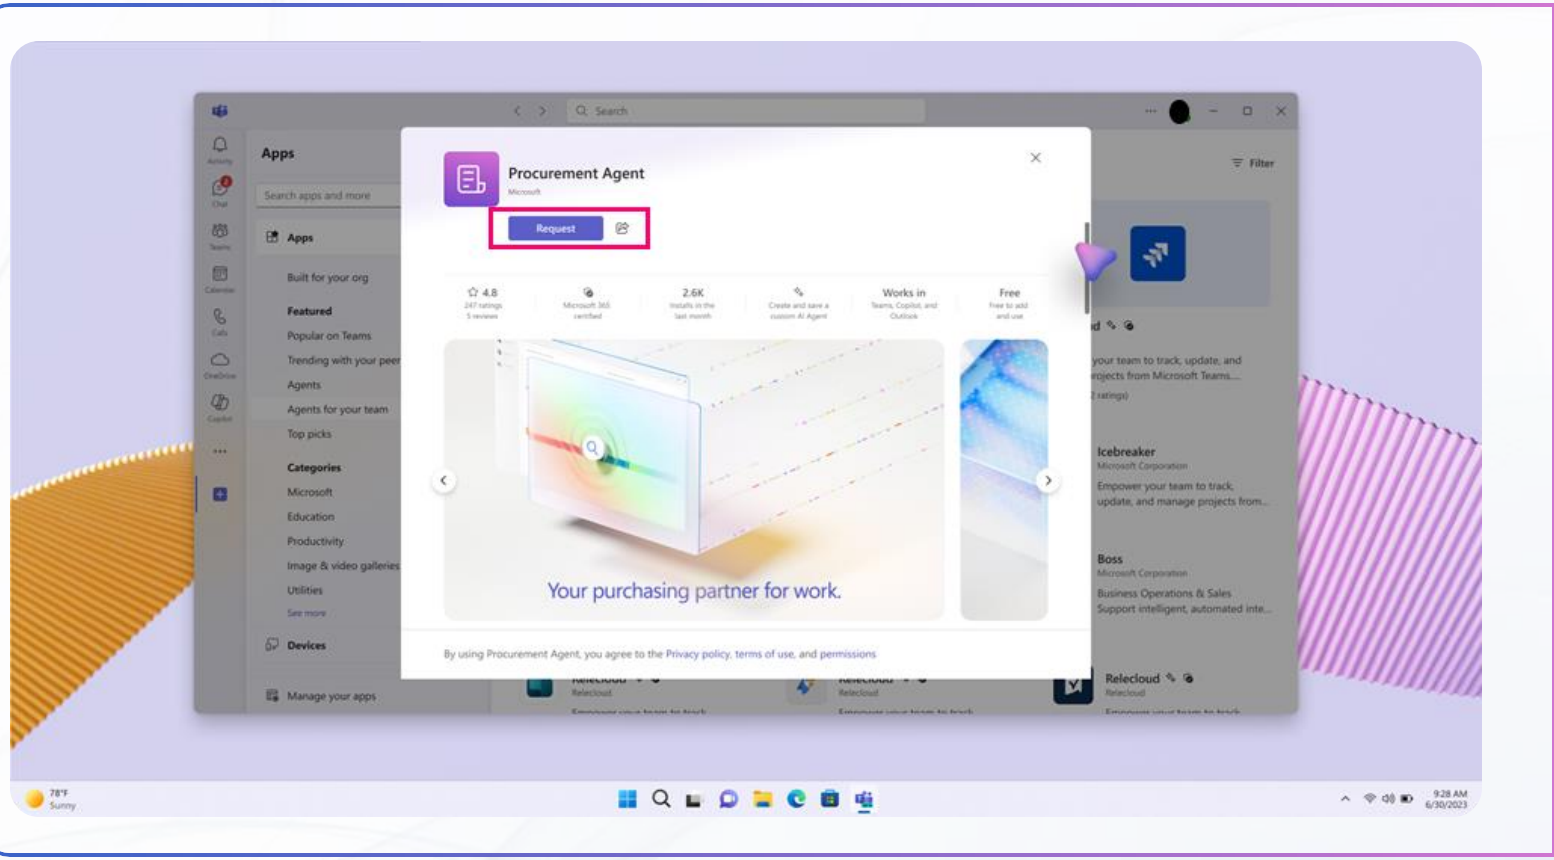

1. Agent templates are preconfigured, IT-approved definitions of Agent 365 agents in Microsoft 365. Each template defines:
   - Agent capabilities, identity, and compliance settings
   - Required licenses and policies
   - Developer information
2. Admin approval is required before any template can be activated.

Create an Agent

Create an agent

1. Select **Request** on the agent template details page.
2. Admin approves the request in the Microsoft 365 admin center.
   - Activates the template
   - Assigns licenses and policies
3. After activation, select **Create** on the template page.
4. **Configure** the agent.
   - Agent icon
   - Name (configurable – no spaces or special characters)
   - Agent description
5. Select **Save** to finish.

Onboard an agent

Post-creation state

The AI agent appears in your organization chart under the creator's supervision

Where you interact

- Copilot chat
- Teams chat
- Teams Channels
- Teams Meetings

Ongoing management

- Configure more settings in the agent card in Teams or Copilot chat
- Pause or delete agents in Teams or Copilot chat
- Tenant admins can also manage agents in the Microsoft 365 admin center

Deletion

Resources associated with an agent remain for **30 days after deletion**

Agent Lifecycle Management in Agent 365

Availability & Access

- Publish
- Activate
- Deploy
- Pin
- Block

Removal & Updates

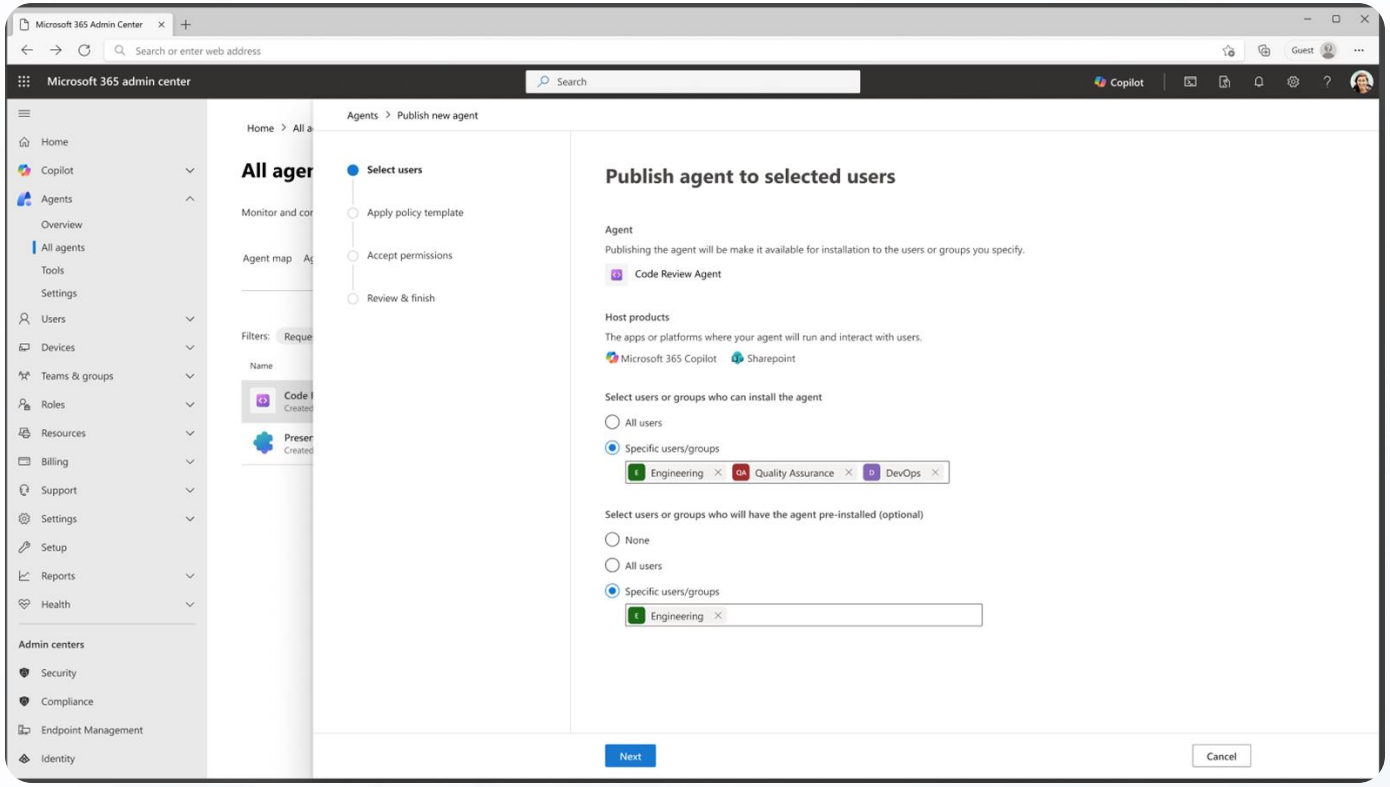

- Remove
- Delete
- Approve Updates

Ownership & Governance

- Manage Ownerless Agents
- Reassign Owner

Reporting

Export Inventory (Export to Excel)

Manage agent instances in Microsoft 365 admin center

Centralized Management

View how many instances are created for a specific agent from a single unified dashboard view.

Agent Details Flyout

Selecting an agent instantly reveals the **total instance count** within the Overview tab.

Instance Details

Selecting **See details** provides a comprehensive list of all instances and empowers administrators to:

- Manage individual instances
- Review security & compliance status
- Apply licenses at instance level

Demo

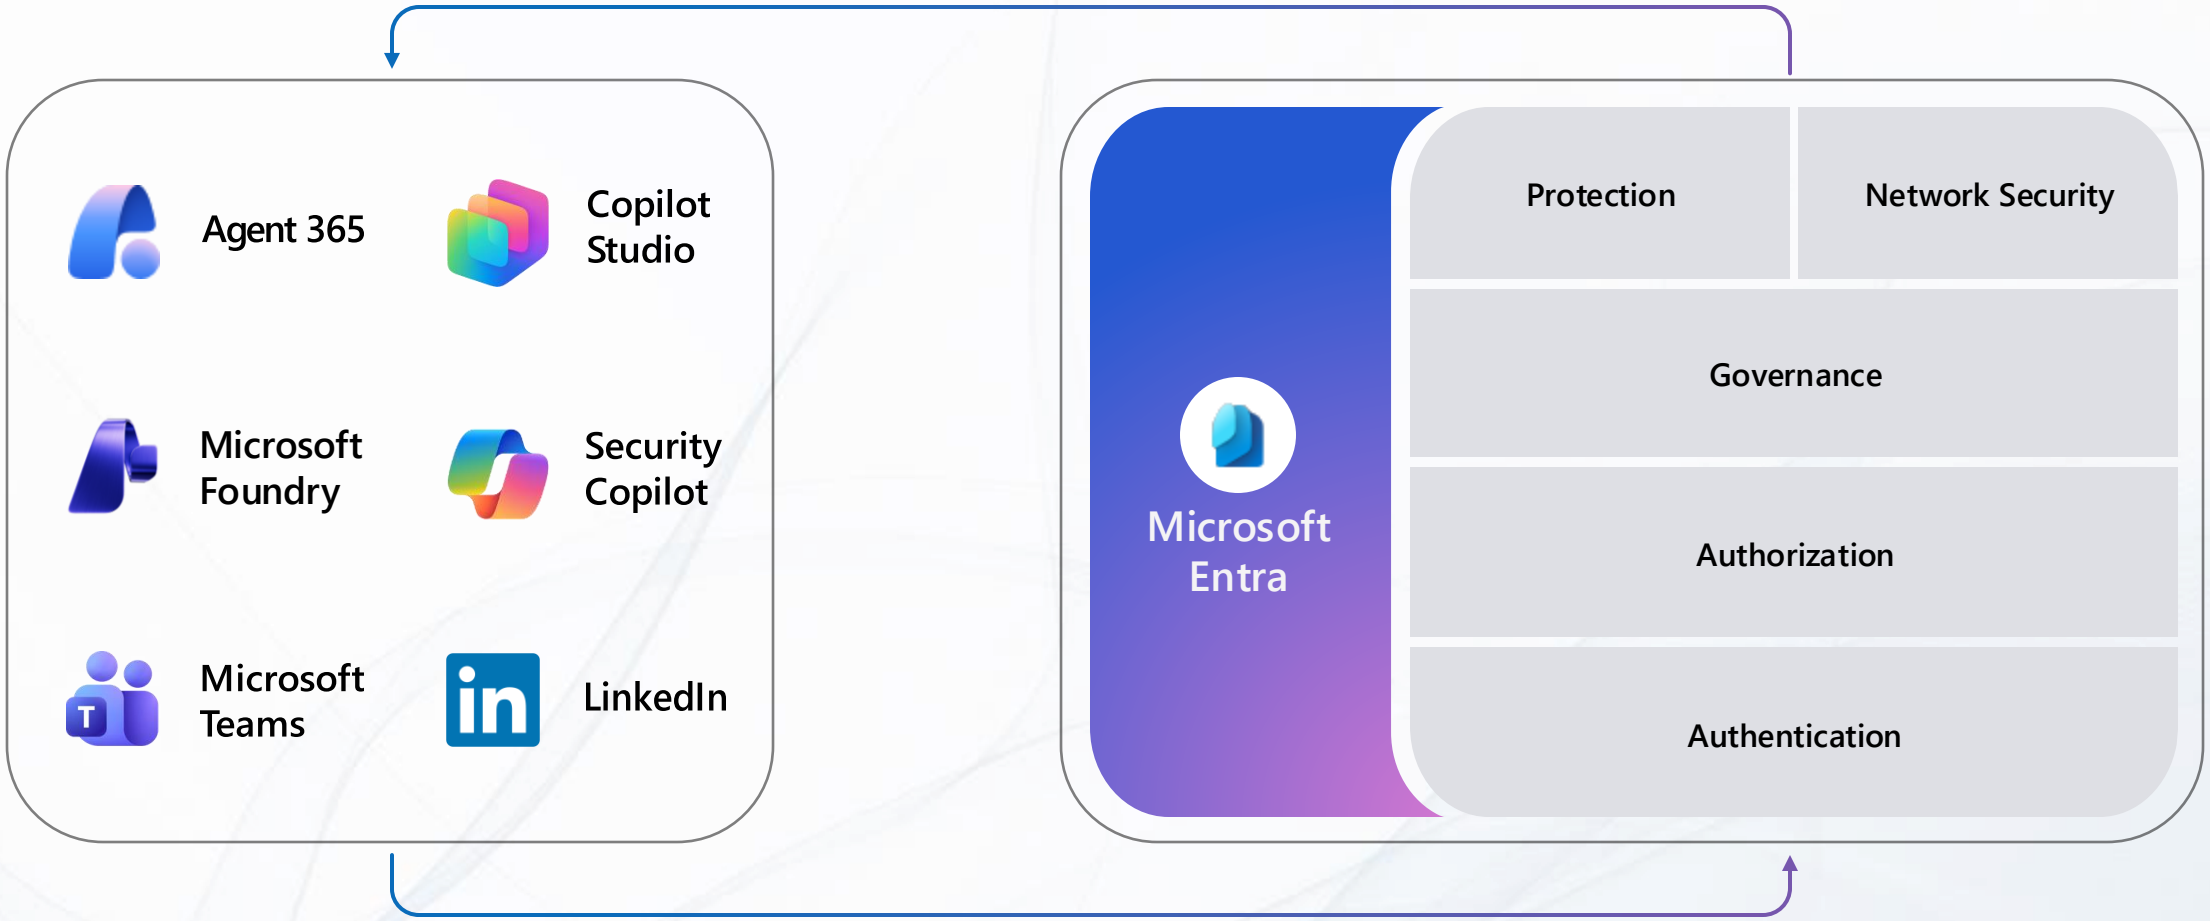

Agent Lifecycle Controls in the Microsoft 365 Admin Center

Microsoft Entra Agent ID

Secure access for AI agents - just as you do for employees - with enterprise-grade access management, protection, and governance of agent identities.

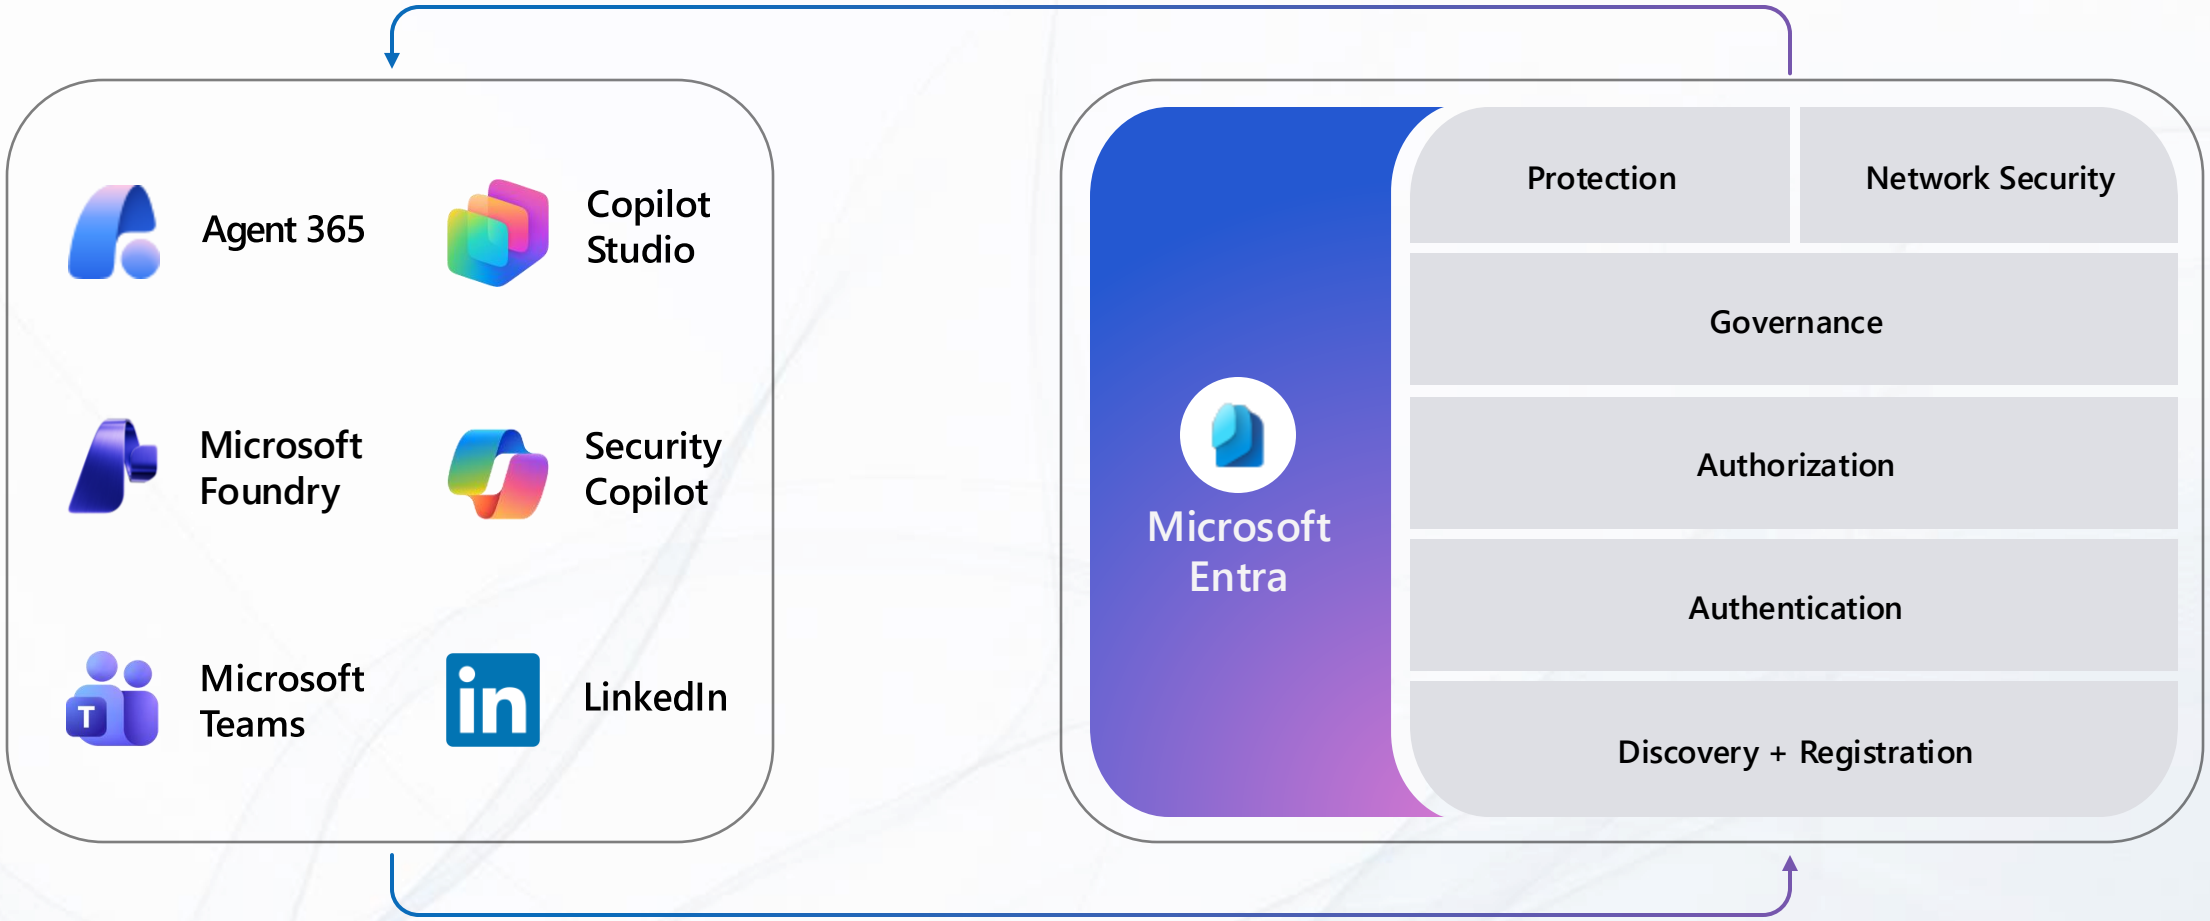

Microsoft Entra Agent ID ecosystem

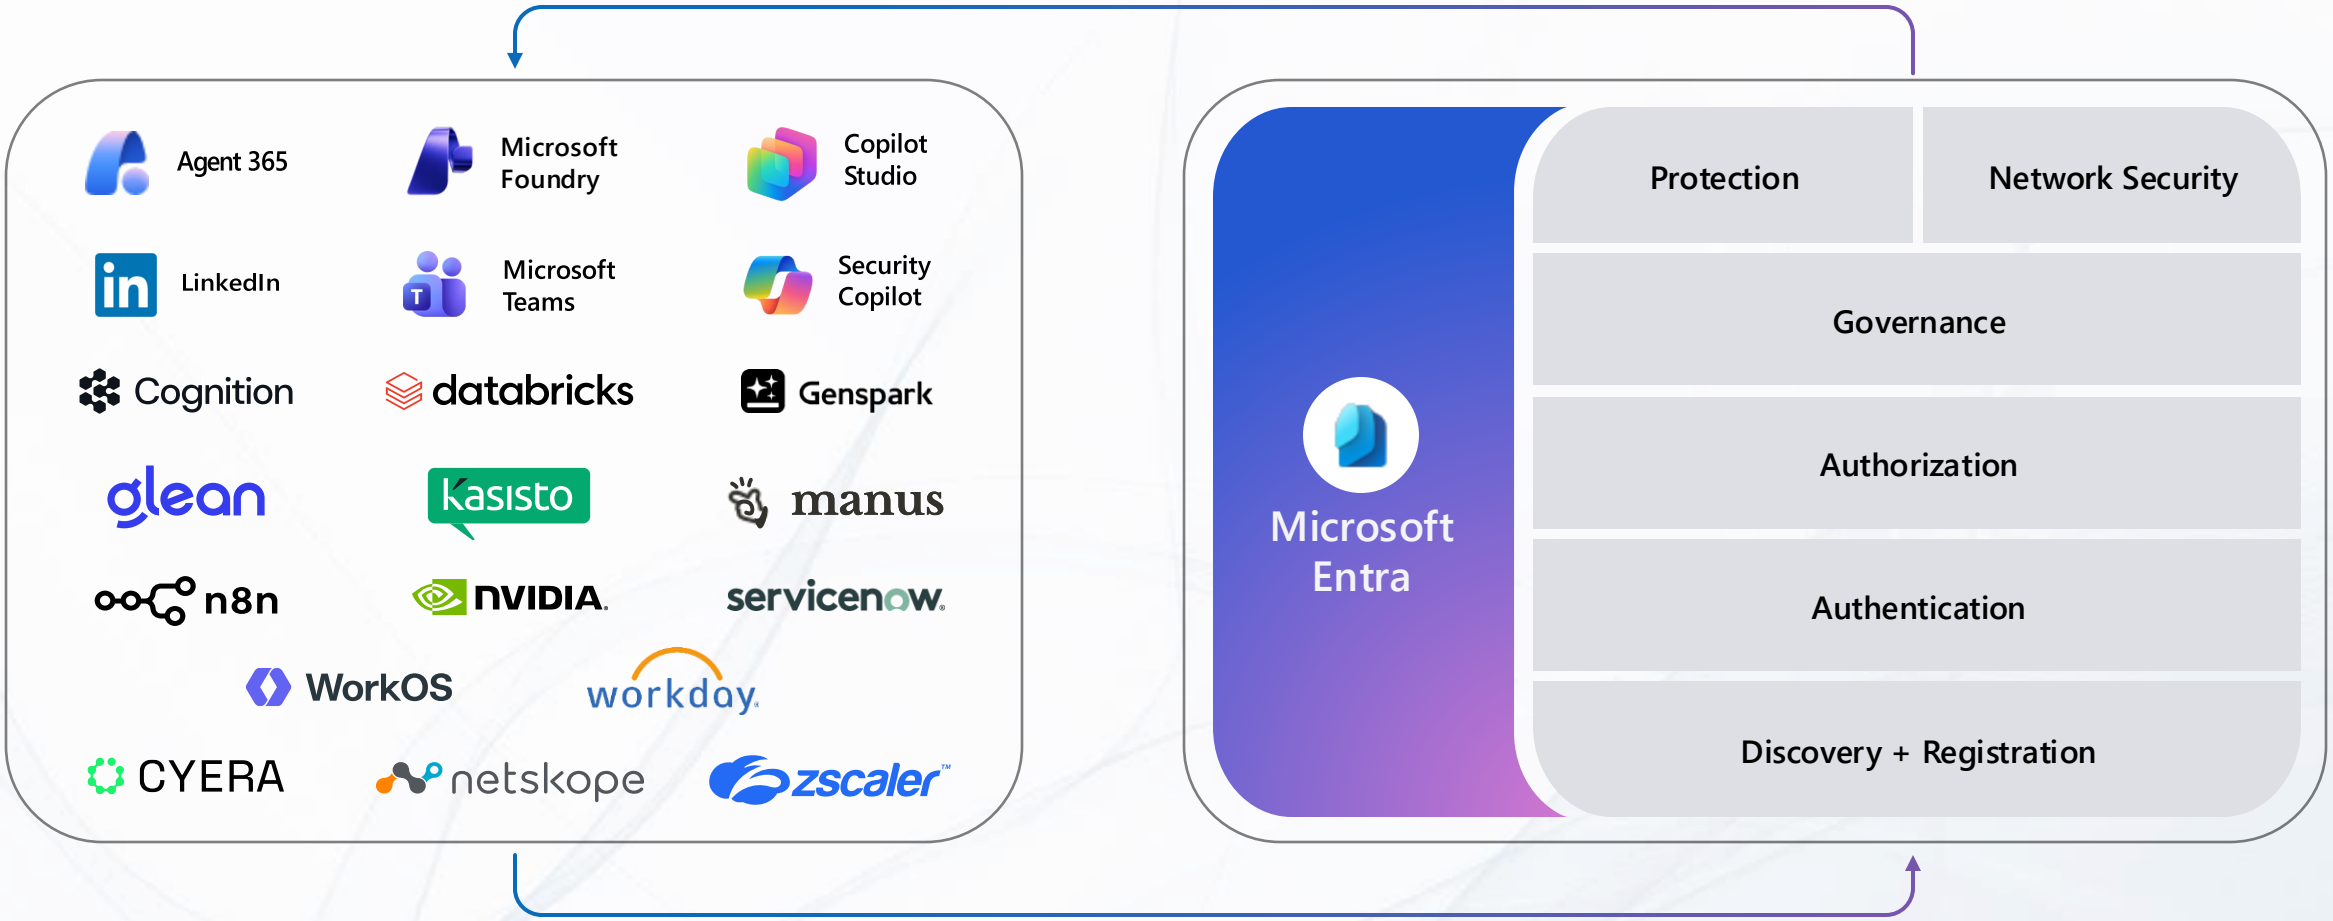

Bring the same **protections and controls** you rely on for users to **AI Agents**

Microsoft Entra Agent ID ecosystem

Bring the same **protections and controls** you rely on for users to **AI Agents**

Microsoft Entra Agent ID ecosystem

Bring the same **protections and controls** you rely on for users to **AI Agents**

ID Protection for agents (Preview)

Overview

Microsoft Entra ID Protection helps protect organizations by automatically detecting and responding to identity-based risks on agents using the Microsoft Entra Agent ID platform.

Prerequisites

Roles (for Risky Agent reports)

- Security Administrator
- Security Operator
- Security Reader

Conditional Access policies

- Conditional Access Administrator

Licensing

- Included with
  - Microsoft Entra P2 license
  - Microsoft E7

How It Works

- Agents operate autonomously and on behalf of users
- Baseline of normal activity is established
- Continuous monitoring in Microsoft Entra ID
- Suspicious behavior flagged as risky

Risk Detection Model

All risk detections for risky agents are ***offline***

Activities Contributing to Risk

Unfamiliar resource access — Agent targeted resources it doesn't usually access	**Sign-in spike** — Higher number of sign-ins than usual	**Failed access attempt** — Attempted unauthorized resource access	**Sign-in by risky user** — Delegated sign-in by risky user	**Confirmed compromised** — Admin confirmed agent compromised	**Microsoft Entra threat intelligence** — Activity matches known attack patterns

Purpose

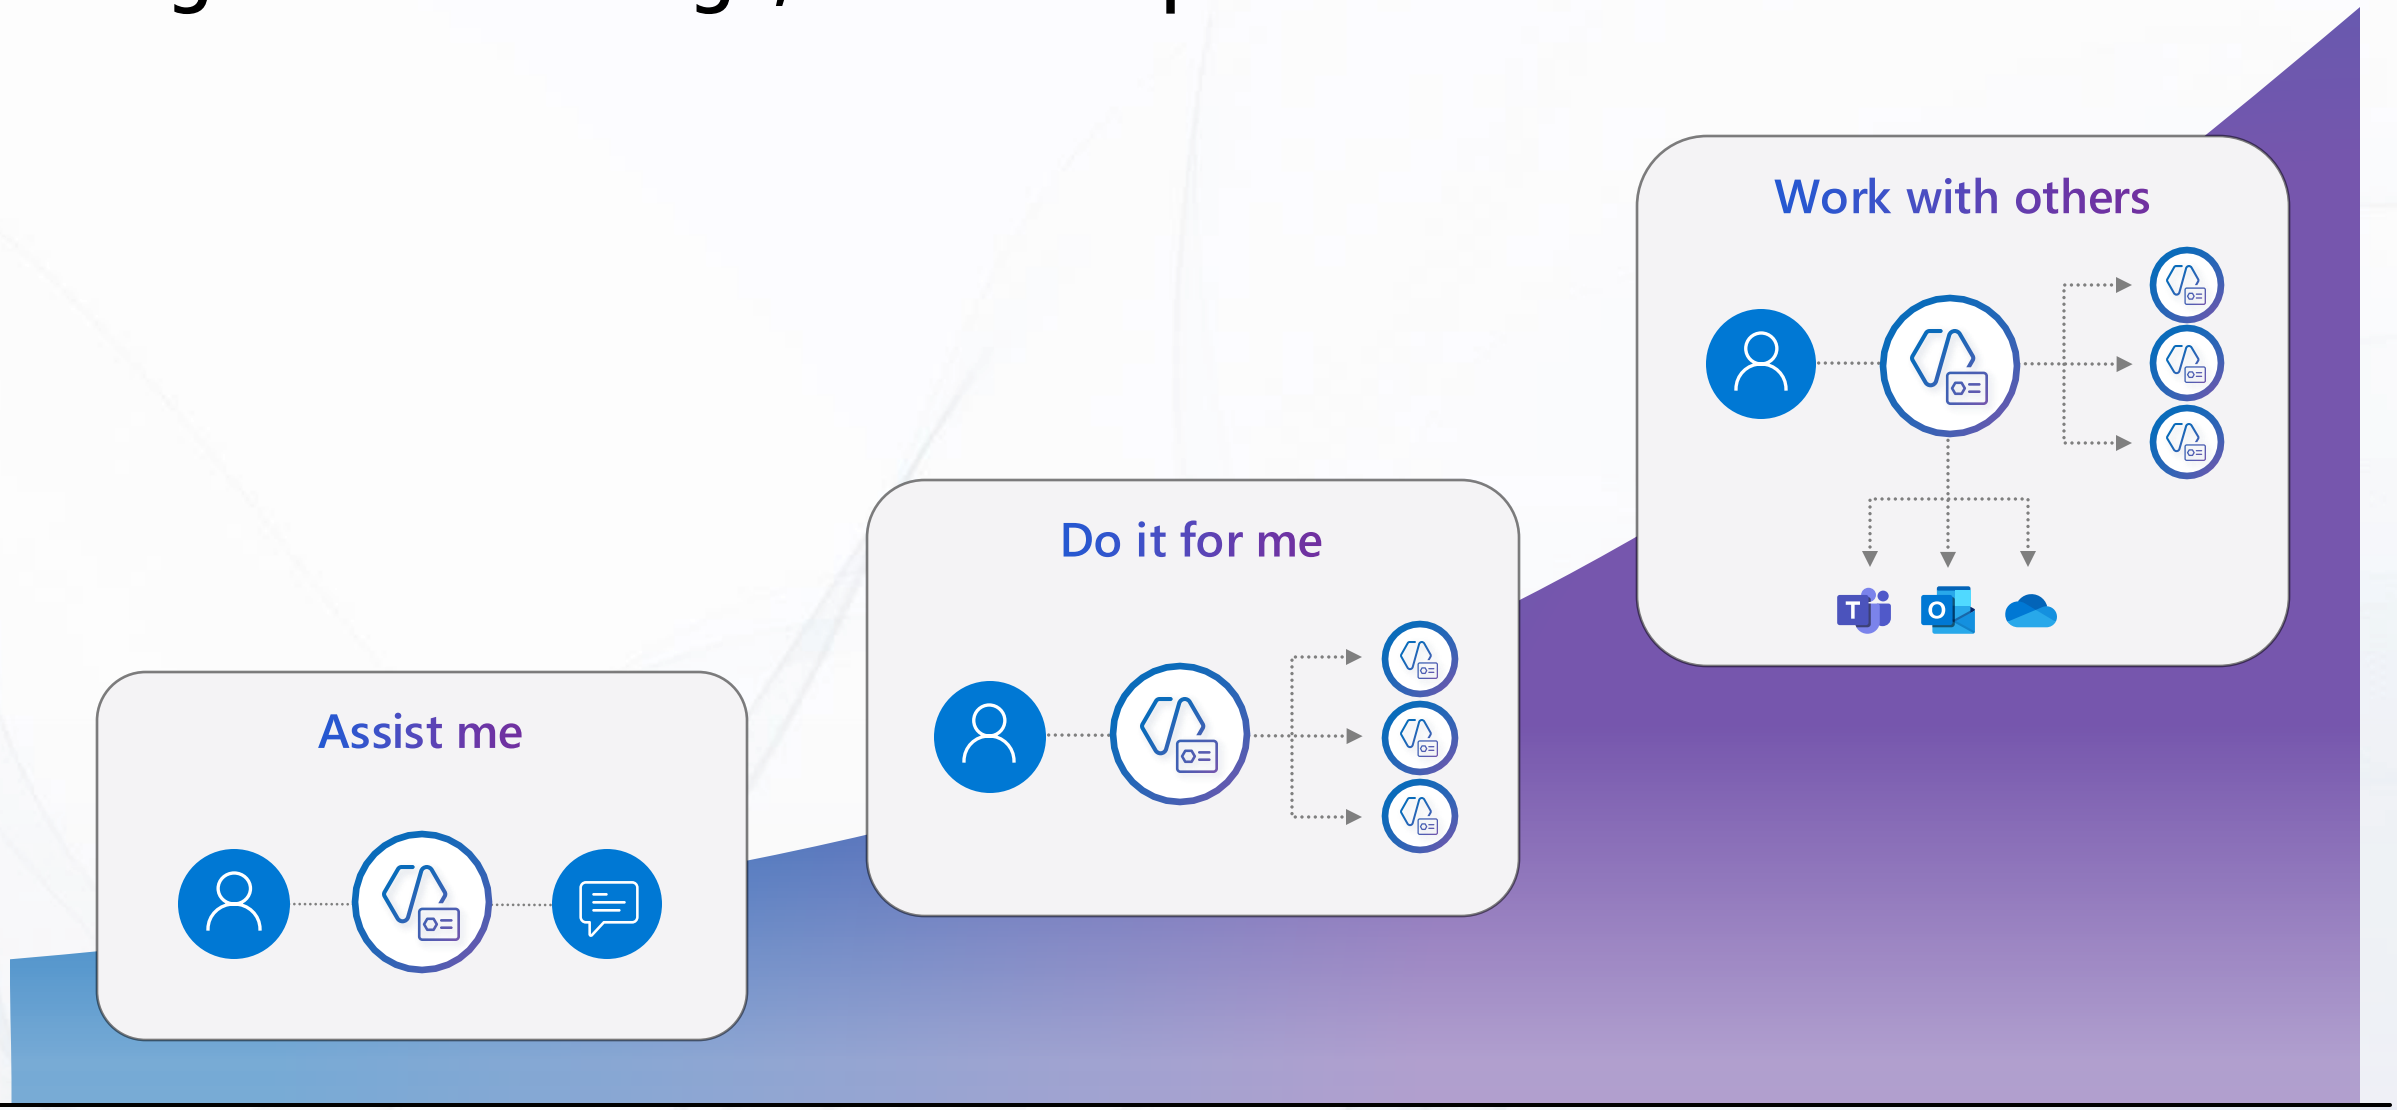

Identify and mitigate identity-based risks for autonomous agents operating at scale.

Agent VS Human VS Application Identity

Identity Type	Purpose	Behaviour Characteristics	Example Use
Agent identity	Represents AI agents	Autonomous execution, tool usage, environment interaction	Workflow-driven AI agent
Human user	Represents a person	Interactive sign-in, MFA, session-based	Employee accessing resources
Application identity	Represents backend services	Non-interactive, static permissions	Web API or daemon

- Agent identities provide unique authentication, scoped resource access, and enterprise governance.
- Designed to support autonomous workflows, tool invocation, and internal orchestration cycles.
- Enables traceability and policy enforcement distinct from human and application identities.

As agent roles change, so should permissions

Agent identity and blueprint concepts

Foundational identity types and their roles in Microsoft Entra ID

Agent identity

- Primary account an AI agent uses to authenticate
- Has unique **object ID** and **app ID** with same value
- No password or credential; authenticates via access token
- Token issued to the service or platform where agent runs

Agent identity blueprint

- Template and management structure for agent identities
- Serves as the parent of agent identity instances
- Used to create and manage multiple agent identities
- Blueprint guidance documented in Microsoft Entra ID

Agent identity blueprint principal

- Principal object created when blueprint added to tenant
- Records and manages blueprint presence in that tenant
- Microsoft Entra object representing blueprint addition

Agent user

- Secondary user-account alternative for agent authentication
- Is a tenant user object with properties like manager, UPN, photo
- Compatible with systems that require user objects
- Enables AI agents to connect where user objects are mandatory

Microsoft agent identity platform architecture

Authentication service

- Standards-based: OAuth 2.0 + OpenID Connect (OIDC)
- Issues tokens for agent access
  - Application-only access
  - Delegated (user) access
- Core identity constructs
  - Agent identity blueprint
  - Agent identity
  - Agent user

SDKs

- Simplify token acquisition and protocol handling
- Supported SDKs
  - Microsoft Identity Web (.NET)
  - Microsoft Entra SDK for Agent ID

Agent management

- Admin experience in **Microsoft Entra admin center**
- **Agent registry**
  - Centralized discovery
  - Configuration and lifecycle management

Microsoft agent identity platform – authentication & authorization

OpenID Connect (OIDC)

- Agent authentication
- Trust establishment between agents and services

OAuth 2.0

- Access tokens for resource and API access
- Supports application-only and delegated flows

Tokens

- Primary security mechanism
- Multiple token flow patterns for agent scenarios

Microsoft agent identity platform – integration & interoperability

Microsoft Entra ID

- Extends existing identity infrastructure and policies to agents

Agent platforms

- Microsoft platforms (e.g., Copilot Studio)
- Third-party agent platforms

Microsoft security services

- Conditional Access
- Identity Protection
- Identity Governance
- Global Secure Access

Microsoft Agent Identity Platform — Key Pillars

Agent registry

- Centralized repository of agent metadata
- Enables agent discovery across the organization
- Supports lookup by:
  - Capabilities
  - Roles
  - Attributes

Foundation for visibility and governance

- Agent operation patterns
- Interactive agents
  - Act on behalf of a signed-in user
  - Use Microsoft Entra delegated permissions
  - Tokens: User tokens
- Autonomous agents
  - Act using their own identity
  - Run independently in the background
  - Tokens:
    - Agent tokens (agent identity)
    - Agent user tokens (agent user)

Agent owners, sponsors, and managers

- Owners
  - Technical administration
  - Configuration and operations
- Sponsors
  - Business accountability
  - Lifecycle decisions
- Managers
  - Human operational owner for an agent user
- Separation of technical control and business oversight

Microsoft Entra SDK for agent ID

- Containerized companion service for agents
- Handles:
  - Token acquisition
  - Token validation
  - Secure downstream API calls
- Runs alongside the agent application
- Offloads identity logic from agent code

Defining an agent identity blueprint

Template

- Multiple agent instances, different goals and access
- Each instance uses a distinct agent identity
- Blueprint enforces shared configuration

Shared configuration

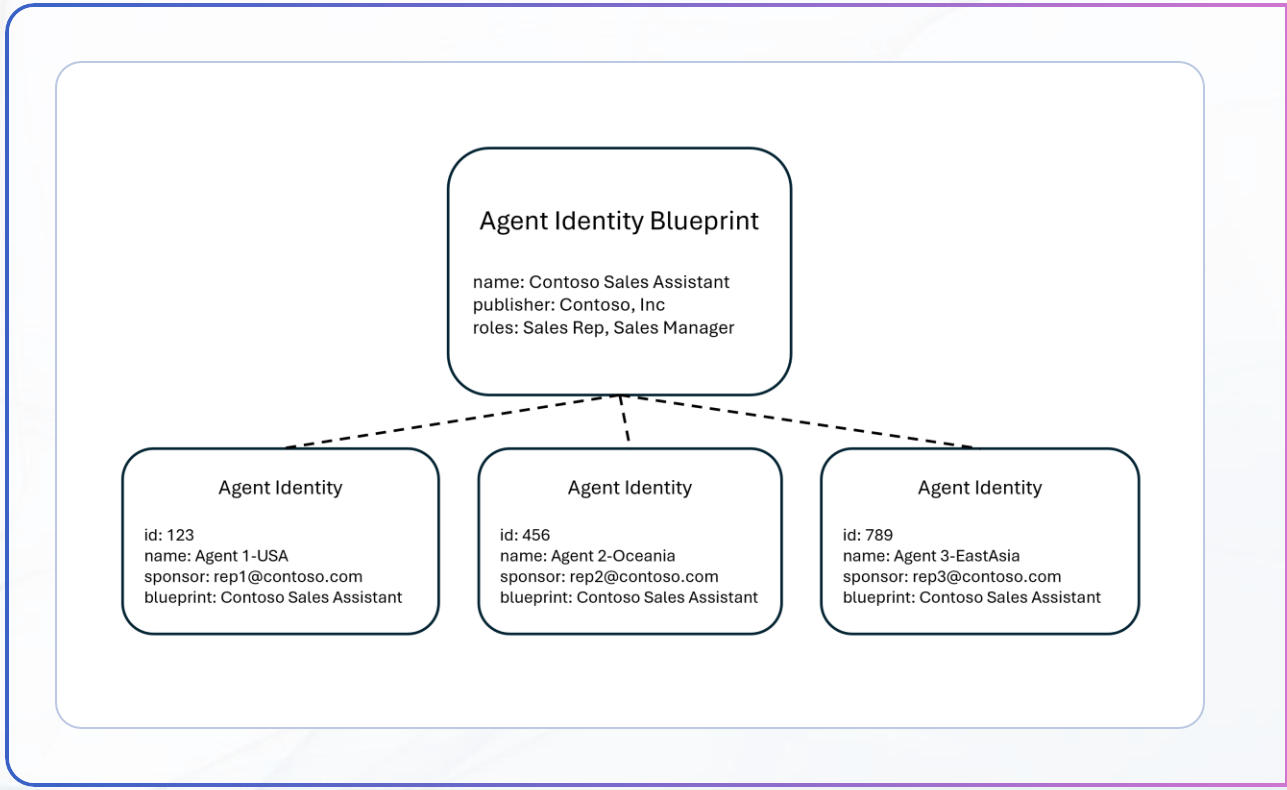

- Description
- App roles
- Verified publisher
- Authentication settings (e.g., optional claims)
- Inherited by all agent identities

Identity provisioning

- Special identity in Microsoft Entra ID
- Can only provision / deprovision agent identities
- Includes:
  - OAuth client ID
  - Credentials
  - AgentIdentity.CreateAsManager permission
- Uses Microsoft Graph APIs

Credentials & governance container

- Credentials stored on blueprint
- Agent identities have no credentials
- Policies applied once affect all agent identities
  - Conditional Access
  - OAuth permissions
- Disable blueprint → all agent identities blocked

Agent identity blueprint principals

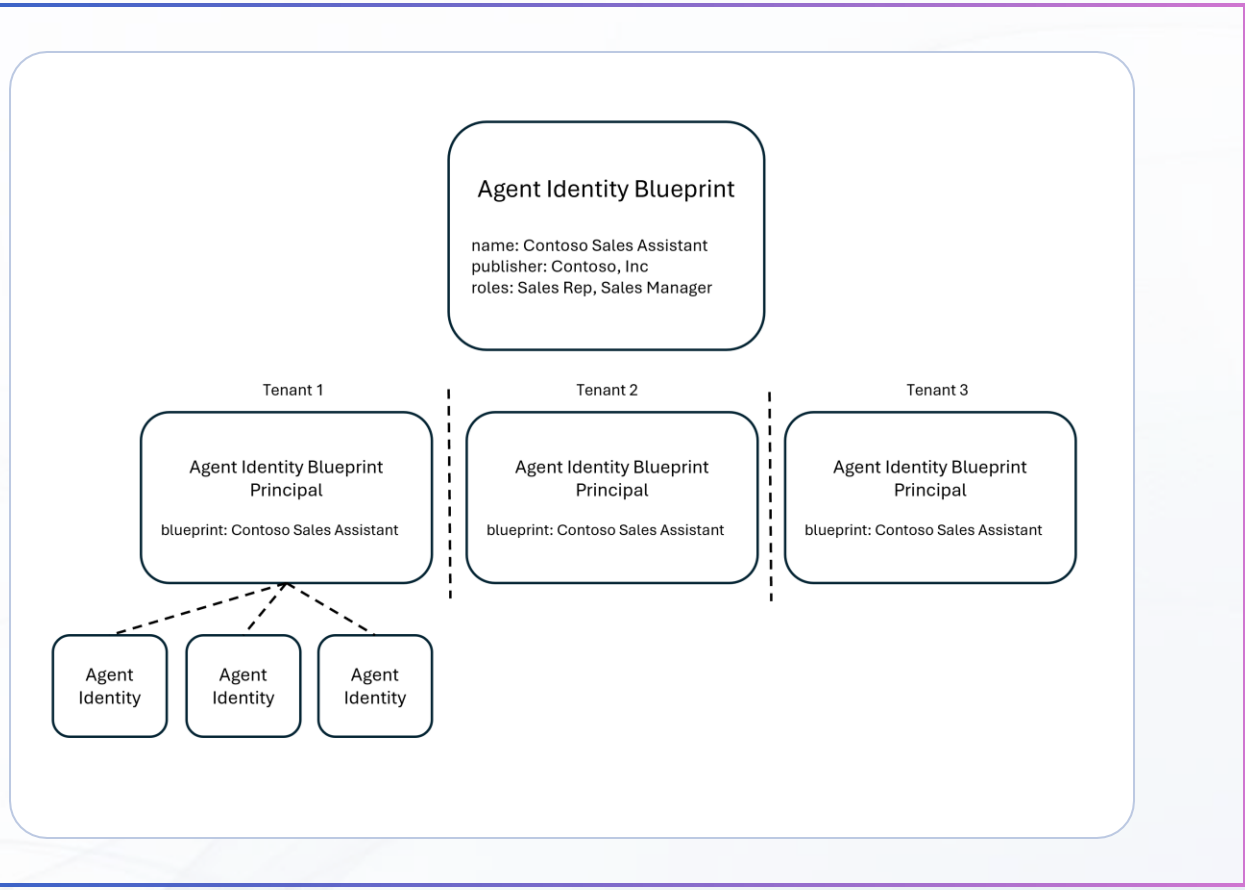

A Microsoft Entra Agent ID object that represents an agent identity blueprint in a tenant and is created when the blueprint is added.

Important roles:

- **Token issuance** – Token oid references the blueprint principal for traceability.
- **Audit logging** – Blueprint actions are logged under the principal.

Blueprints are created in a tenant to create agent identities (single-tenant) or published as multitenant via Microsoft catalogs.

- A blueprint principal is always created when added to a tenant.
- Deleting the principal removes the blueprint.

Agent identities in Microsoft Entra Agent ID

An agent identity is a special service principal in Microsoft Entra ID created by an agent identity blueprint. It has no credentials and relies on the blueprint to acquire tokens with consented scopes.

Token usage

- **Agent tokens (autonomous agents)** – App tokens issued on behalf of the agent identity.
- **User tokens (interactive agents)** – User tokens issued on behalf of the agent identity when called with a user token.

Agent identity capabilities

- Request agent tokens where the **subject** is the agent identity
- Receive access tokens where the **audience** is the agent identity
- Request user tokens where the **subject** is the user and the **actor** is the agent identity

Anatomy of an agent identity

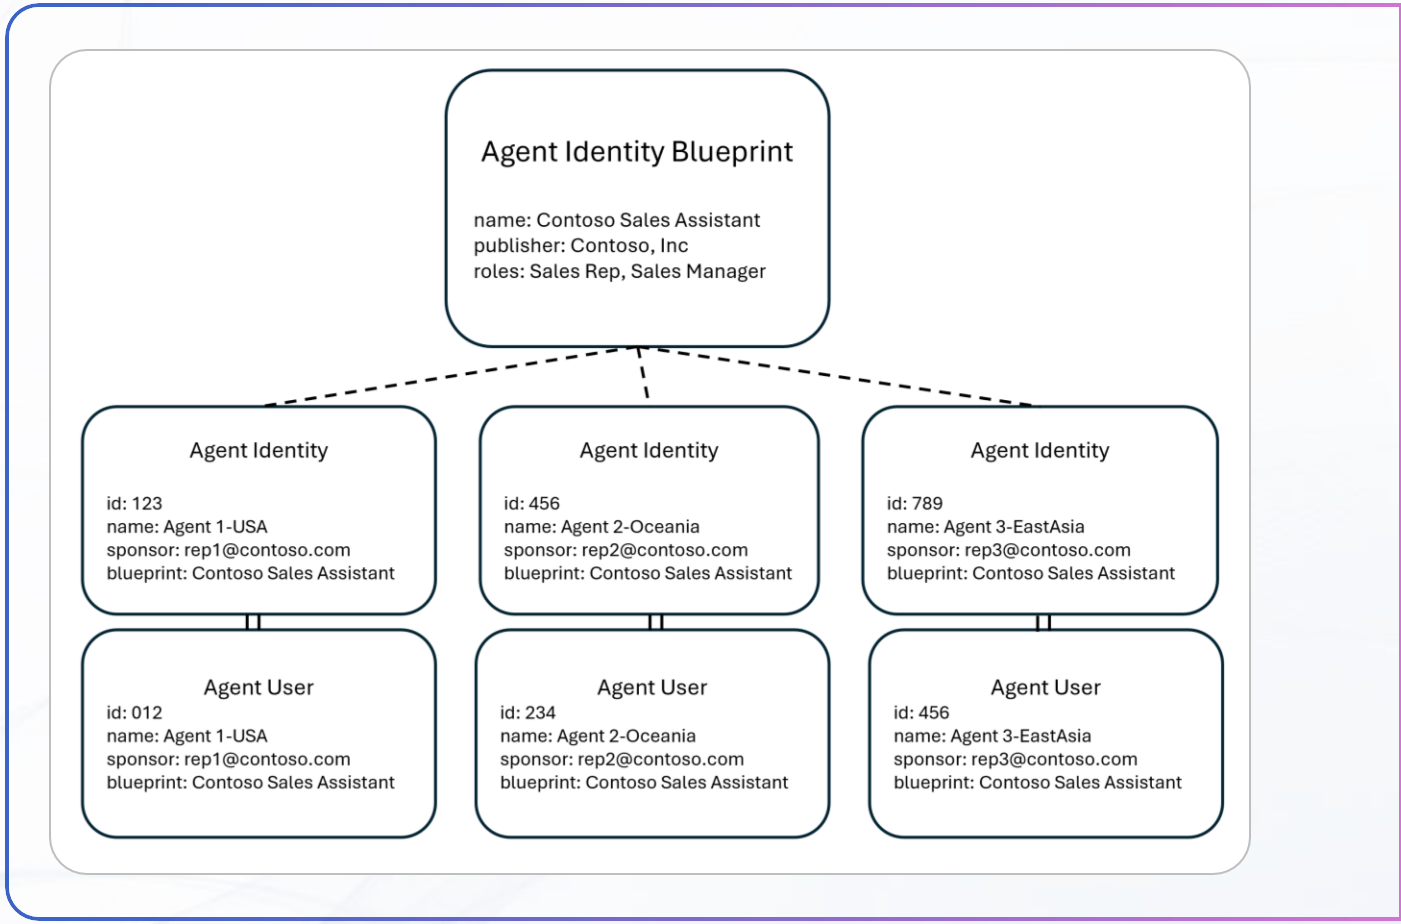

Component	Description
Identifier (object ID)	Unique ID generated by Microsoft Entra to identify the agent identity within a tenant
Credentials	No passwords; uses non-password credentials to authenticate
Display name	Human-friendly name shown in Entra admin center, Azure portal, Teams, Outlook
Sponsor	Human user or group accountable for the agent
Blueprint	Reusable template used to create the agent identity and define shared metadata
Agent user (optional)	Microsoft Entra user account paired 1:1 with the agent identity when user-based auth is required

Agent users in Microsoft Entra Agent ID

Microsoft Entra user identities that allow agents to access systems requiring a user identity using tokens with `idtyp=user`.

Explicitly created and permanently linked 1:1 to a parent agent identity created from an agent identity blueprint.

- Created using an agent identity blueprint
- Always associated with a specific agent identity
- Have a distinct object ID from the agent identity
- Authenticate only with tokens issued to the agent identity

Agent user relationship and authentication model

Relationship & lifecycle

Permission-gated linkage

Agent identity blueprints must be **explicitly permitted** to create and link agent users.

Parent–child binding

Each agent user is **created from a blueprint** and is **permanently linked** to exactly **one parent agent identity (1:1)**.

Lifecycle ownership

The **agent identity owns the relationship**, while **admins control creation and deletion** of the agent user.

Authentication & security model

Federated identity credentials (FIC)

Authentication uses FIC assigned through the agent identity blueprint and agent identity

Restricted credential model

No passwords or interactive sign-in; agent user can authenticate only via parent relationship

Impersonation model

Agent identity impersonates its agent user to obtain tokens and act as the user

Agent user – capabilities & constraints

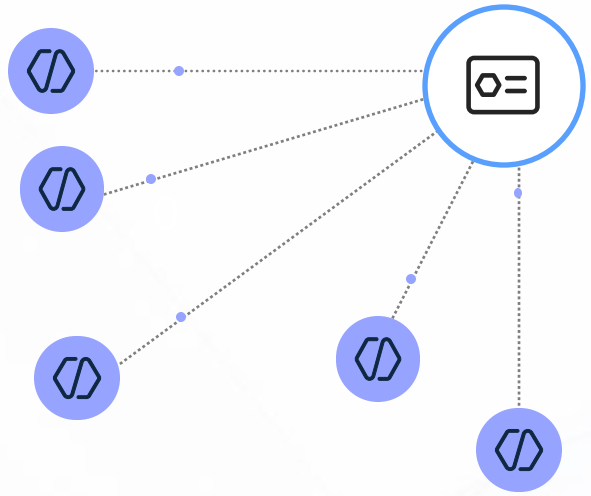

Capabilities

- Join Entra groups (incl. dynamic; not role-assignable)
- Access M365 user-required resources
- Scoped via administrative units
- Assignable licenses

- No passwords or passkeys
- Auth via parent agent identity only
- No privileged admin roles
- Restricted permission model

Constraints

Microsoft Entra Agent ID

Register

and manage AI agents

Govern

agent identities and lifecycle

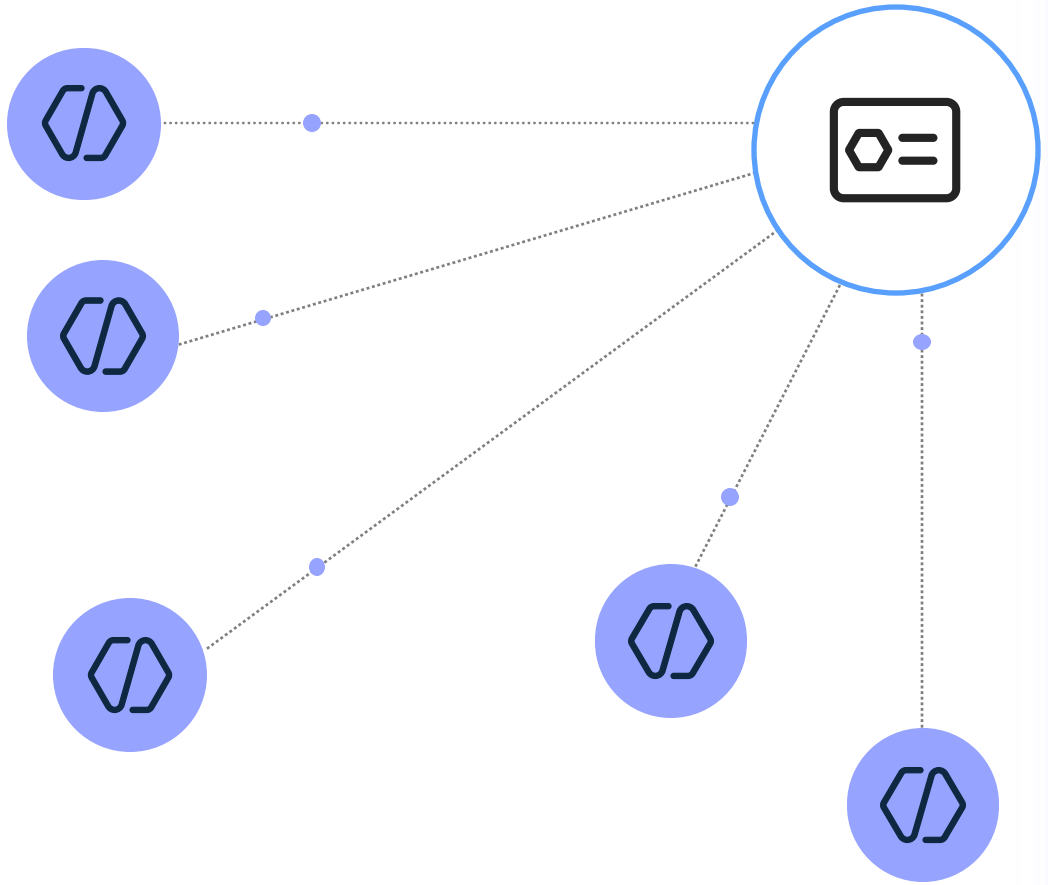

Protect

agent access to resources

Register and manage agents

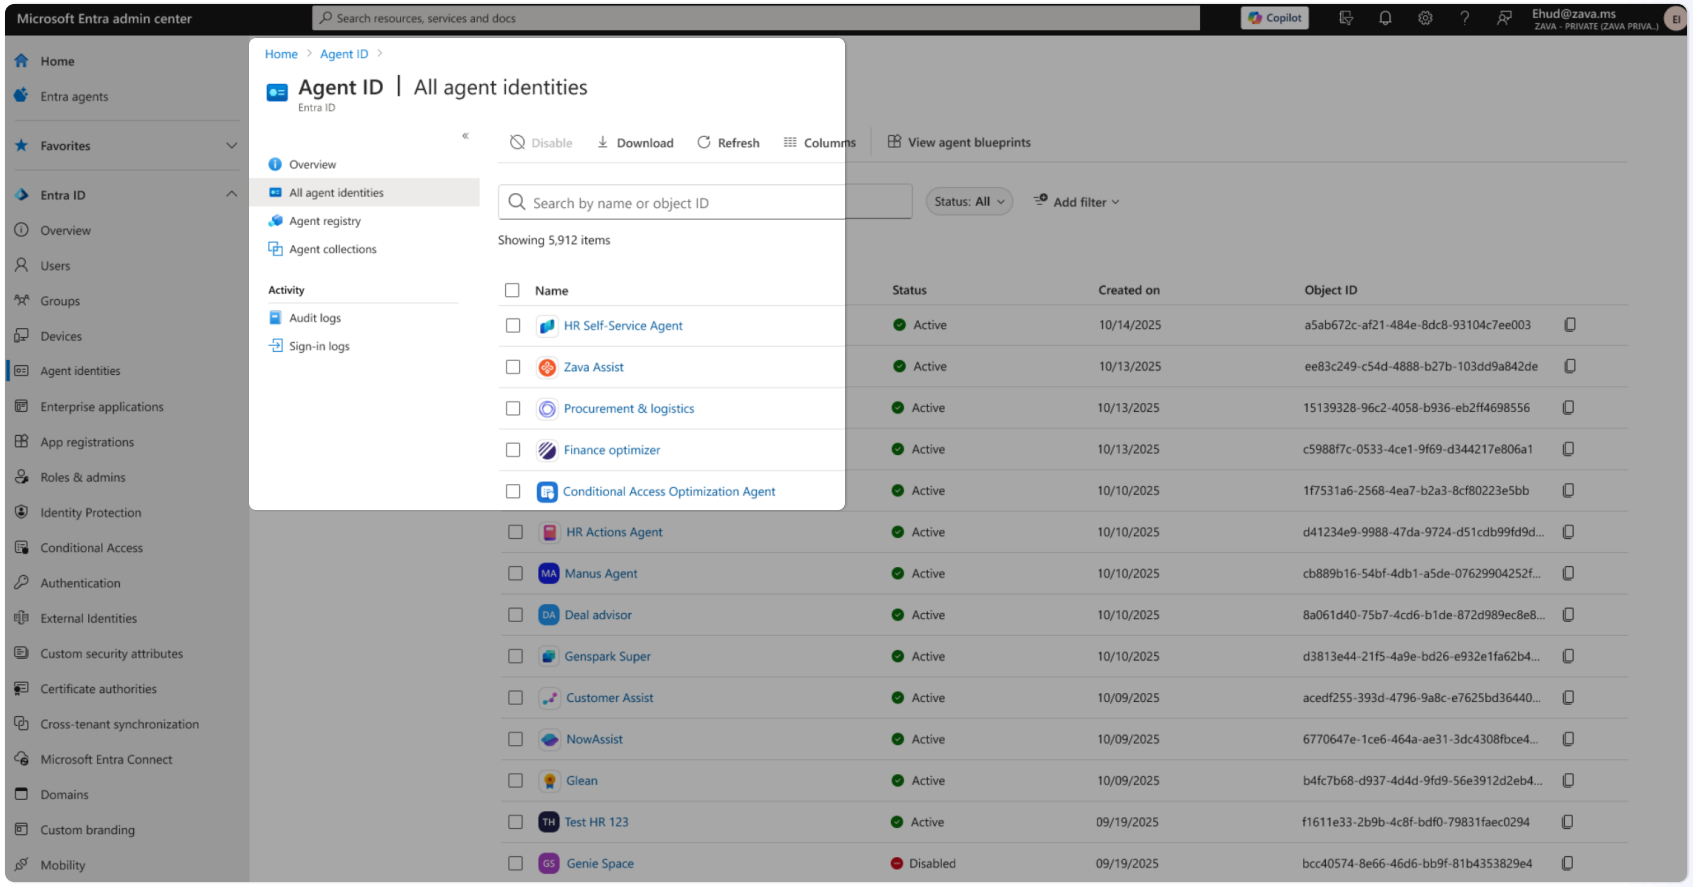

Get a complete inventory of your agent fleet and ensure agents are created with a built-in identity.

- Ensure that new agents have an agent ID built-in.
- Empower developers to build enterprise-ready agents.

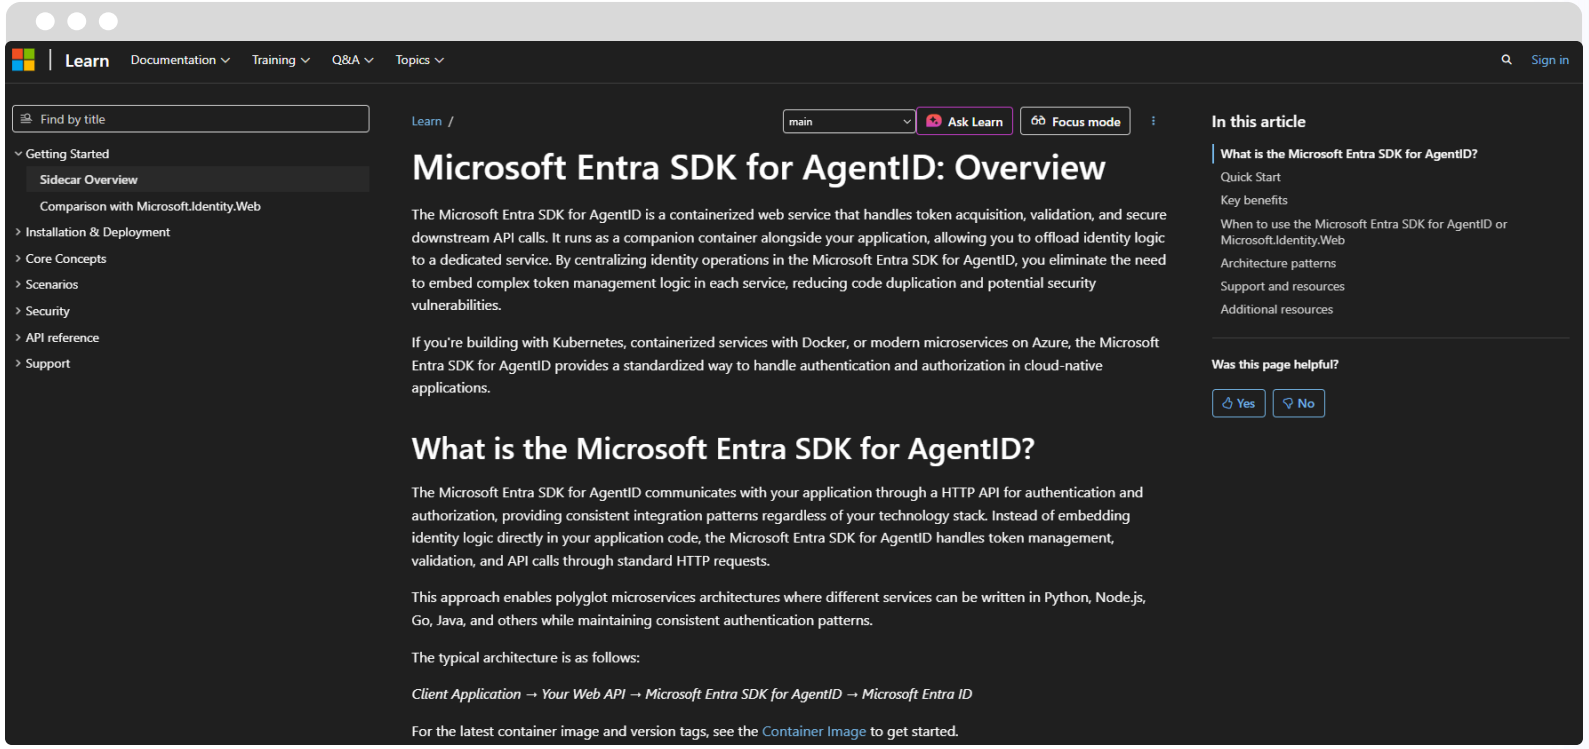

Built-in agent identity

Ensure AI agents are traceable, authenticated, authorized, and secured, like any user in your organization.

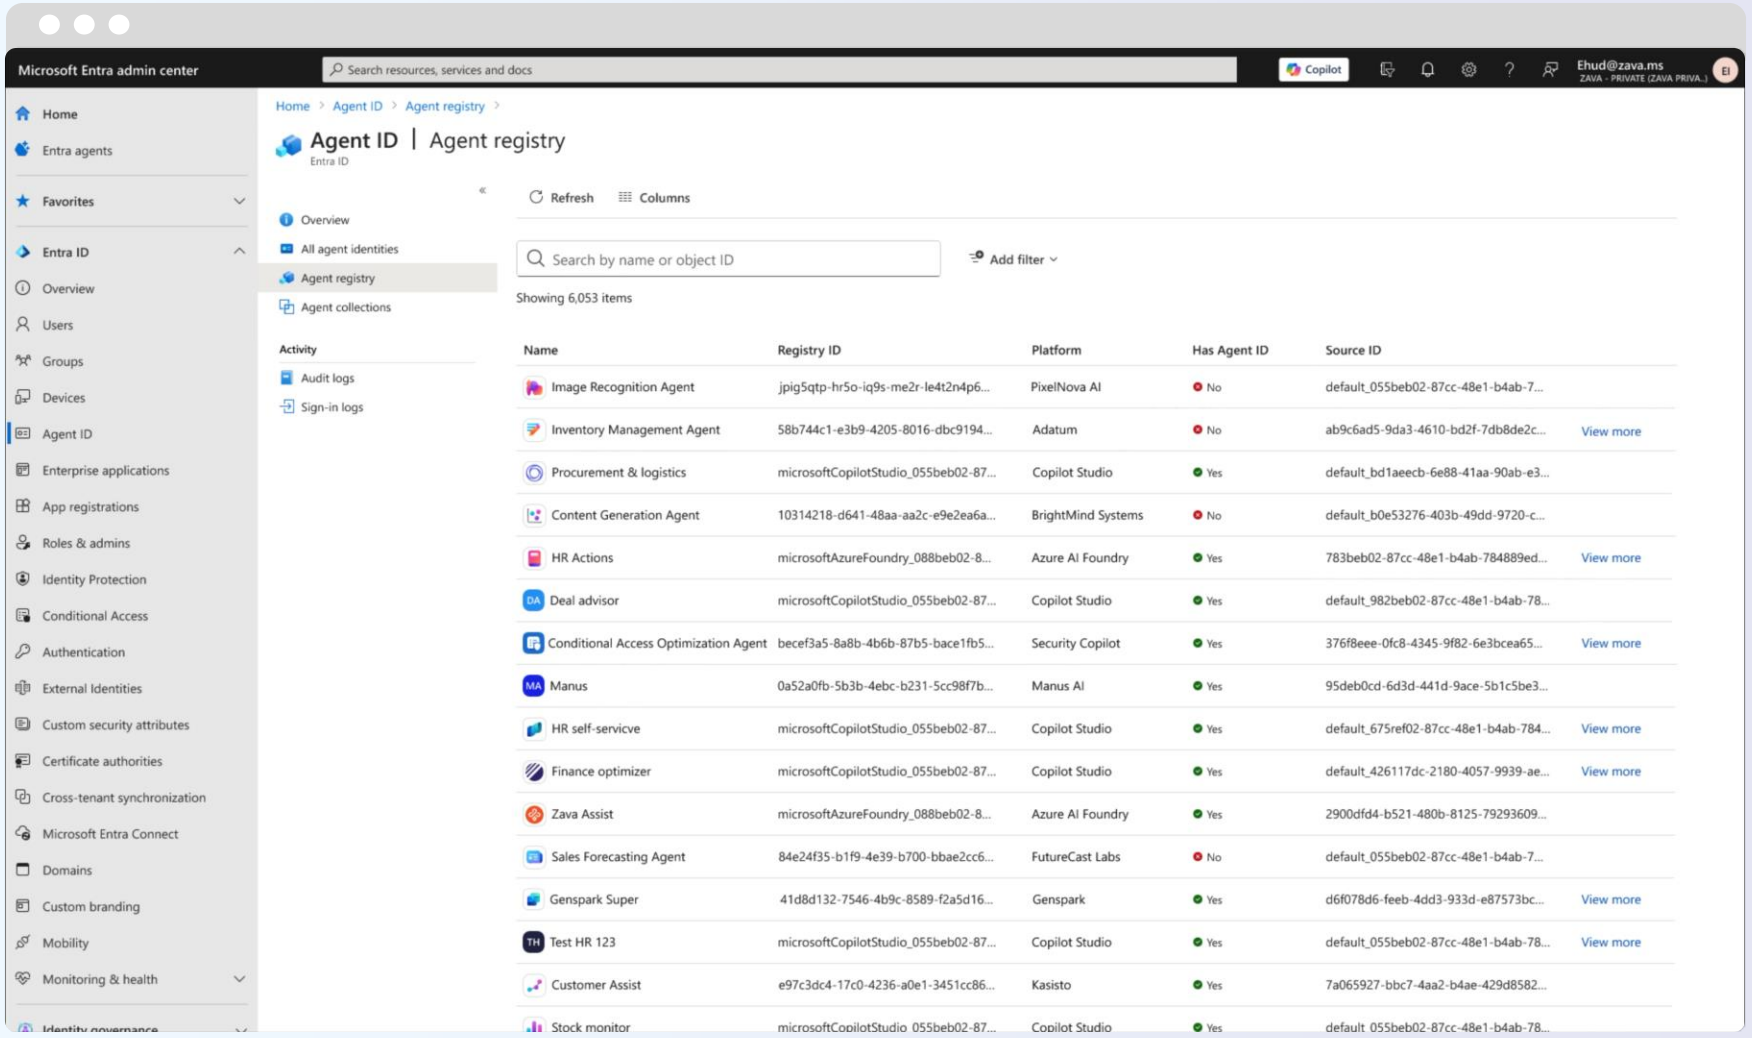

Enable Agent ID for developers

Integrate your agents with Agent ID APIs and SDKs and agent registry APIs to ensure secure access controls.

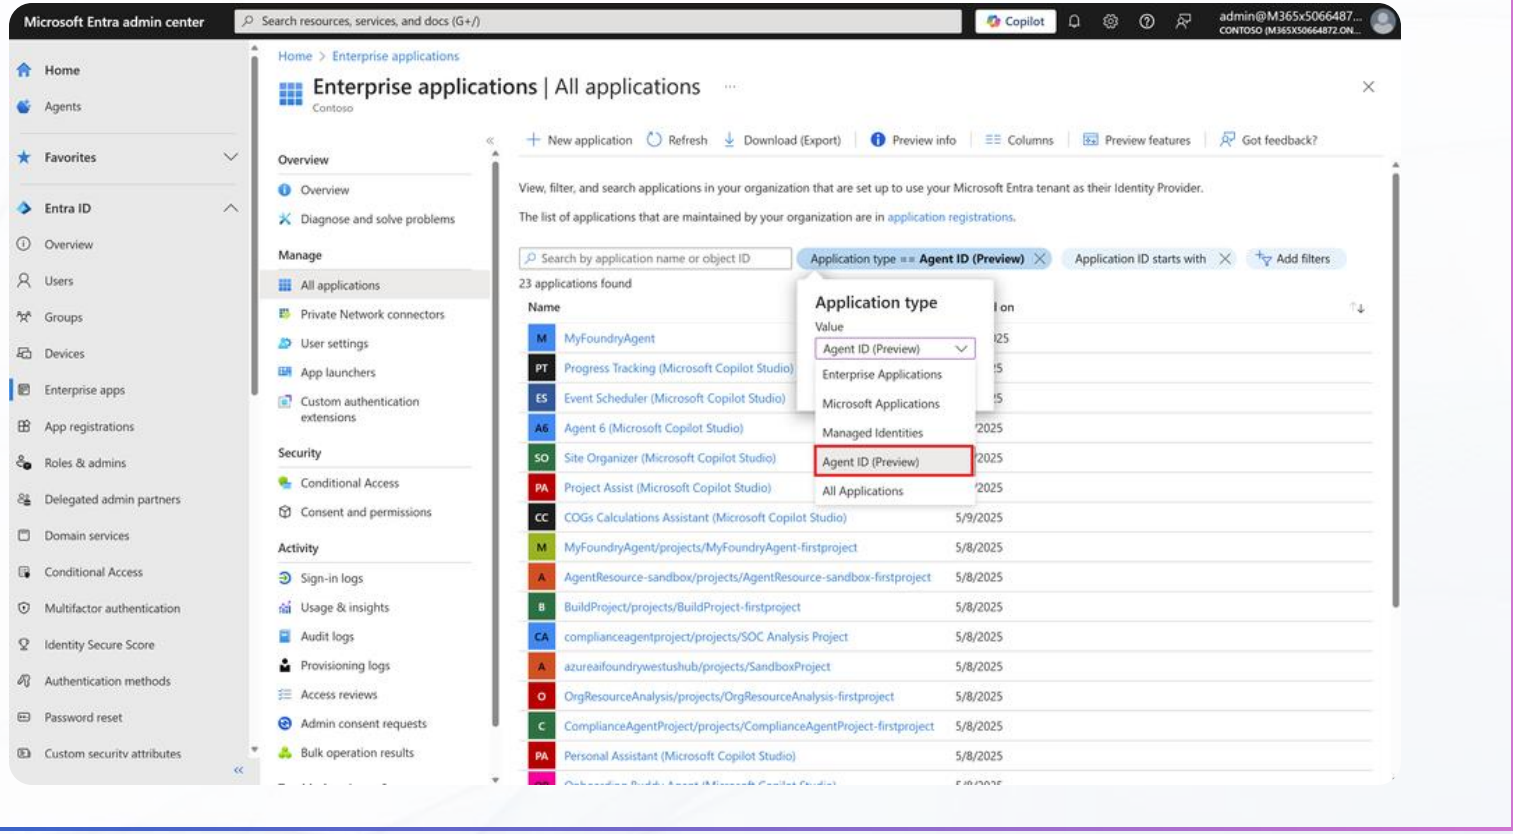

Demo: Register and manage AI agents

Microsoft Entra Agent Registry

- Integrates with **Microsoft Entra Agent ID** and Core Directory
- Single **source of truth** for all agent data
- **Supports multiple instances** per agent card
- Enables **Zero Trust** and governance across environments
- Combines **visibility, metadata, and collection-based policies**

Key Capabilities & Benefits

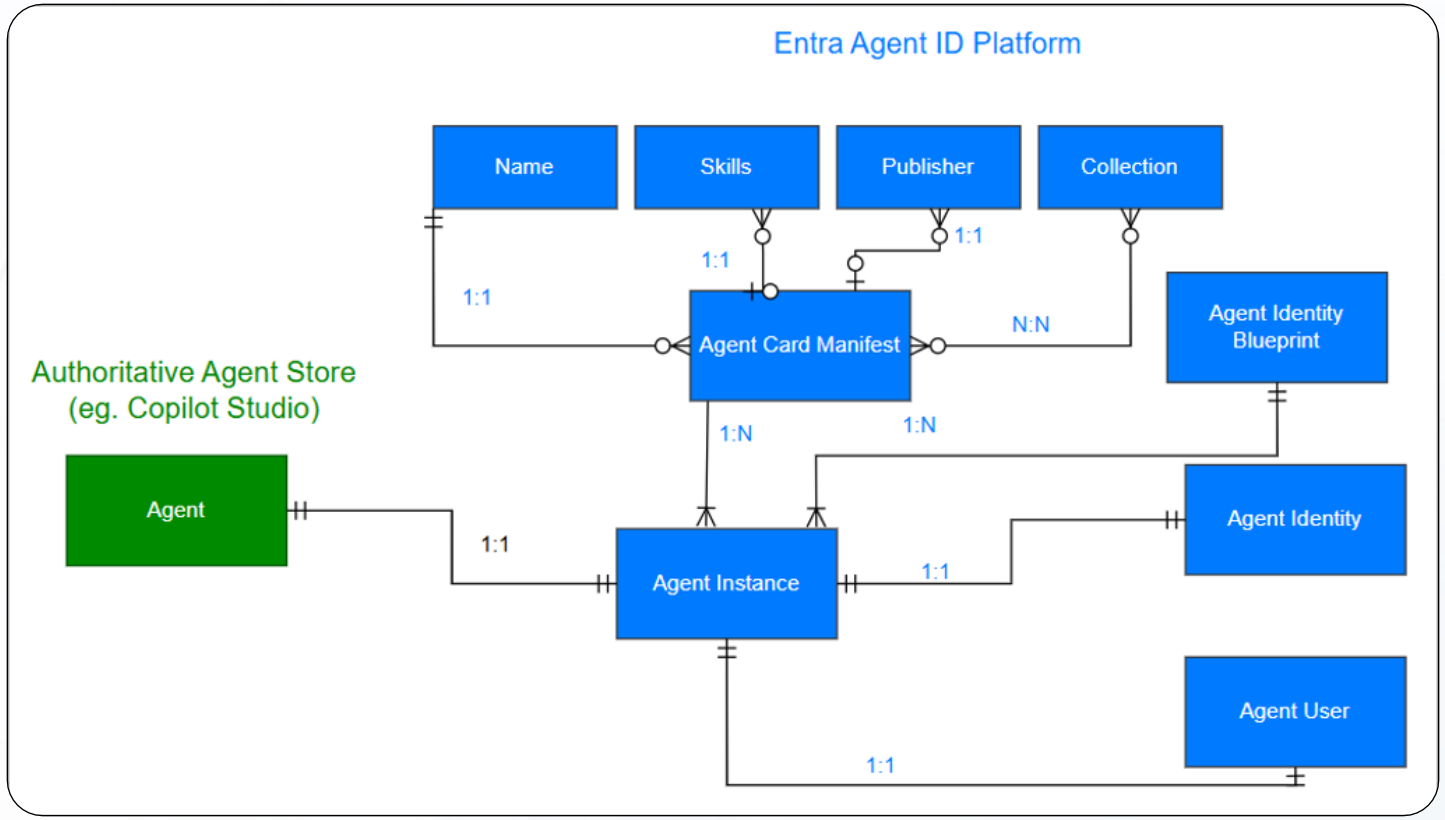

- **Comprehensive inventory:** All agents, with or without identity
- **Discovery & policy enforcement:** Built-in & custom controls via agent collections
- **Rich metadata:** Open-standard schema for governance and security policies

Difference between Microsoft Agent 365 and Microsoft Entra Agent Registry

Aspect	Microsoft Agent 365	Microsoft Entra Agent Registry
Primary Role	Unified control plane & registry for all agents	Identity foundation via Agent ID
Main Purpose	Observe, govern & manage all agents enterprise-wide	Manage agent identities, access & security policies
Agent Coverage	All agents — Microsoft, partner & custom (with or without Entra ID)	Only agents with a Microsoft Entra Agent ID
Admin Portal	Microsoft 365 Admin Center	Microsoft Entra Admin Center
Required Role	AI Administrator (or AI Reader for read-only)	Agent ID Administrator
License Needed	Microsoft 365 E7	Microsoft Entra Agent ID / Microsoft 365 E7
Key Capabilities	Discover all agents, monitor operational activity, unified inventory	Conditional Access, identity governance, security signals, blueprints
Relationship	Uses Entra as the identity foundation underneath	Provides identity layer that Agent 365 builds upon

Microsoft Entra Registry: Architecture & Components

- Each agent instance is registered and linked to an **agent card manifest** — one manifest can represent multiple agents (1:N)
- The registry connects to **Microsoft Entra Core Directory** to enforce identity and entitlement policies
- **Agent identity blueprints** serve as reusable identity templates mapping to multiple agent instances
- Each agent instance maintains a **1:1 relationship** with an agent identity and optionally an agent user

The diagram explains the relationship between various key attributes.

Core components of the Agent Registry

Component	Purpose
Metadata store	Centralized agent metadata repository
Collections	Secure agent categorization and discovery control enforcement
Discovery service	Agent and capability discovery APIs
Integration layer	Coordinates with Microsoft and non-Microsoft ecosystems

Publish agents to registry

Centralized Visibility & Management

Automatic Integration

Microsoft Copilot Studio

Microsoft Agent 365

Microsoft Foundry

The Two Pillars of Registration

Agent Instance

Operational details for execution and management.

Agent Card Manifest

Discovery metadata for collaboration.

Prerequisites for Manual Registration

Before starting the self-serve process, ensure you have:

- Agent Registry Administrator role
- Valid Microsoft Entra access token (`graph.microsoft.com/.default`).
- Either app-only permissions or delegated permissions
- Operational endpoint and metadata for non-Microsoft agents.

Self-Serve Registration Workflow

For agents on non-listed or non-Microsoft platforms, use the **Microsoft Graph API**

Register Agent Instance: Used for inventory and operational management.

Register Agent Card: Provides the skills and metadata needed for discovery.

Verify Registration

Confirm the agent appears in the registry through either:

Microsoft Entra Admin Center: Navigate to Agent identities > Agent Registry.

Microsoft Graph API: Query the registry to confirm timestamps and metadata.

Agent metadata and discoverability patterns

Basic Agent Information

‘id’
displayName
description
iconUrl
version
documentationUrl
protocolVersion
provider
managedBy
originatingStore

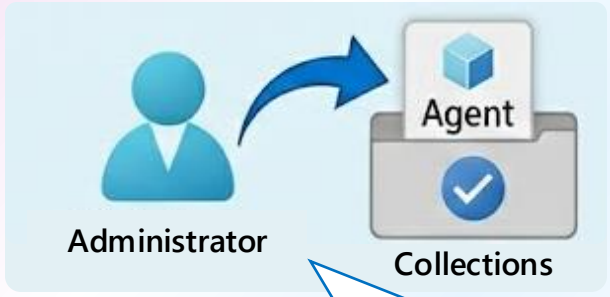

Skills & Capabilities Metadata

skills
defaultInputModes
defaultOutputModes
capabilities
capabilities.extensions

Security & Provider Information

‘securitySchemes’
security
signatures
supportsAuthenticatedExtendedCard
ownerIds

Collections & Discoverability

Explicit Assignment Model: Agents must be manually assigned to collections by administrators.

No automatic assignments based on metadata.

No automatic assignments

Microsoft Entra Agent Registry Collections & Policies

Basic Agent Information

- Collections define how agents are logically organized and discovered during agent-to-agent collaboration
- Registry evaluates agent metadata and returns only agents permitted based on collection membership
- Establish discovery boundaries and collaboration scenarios

Agent Identity Behavior

- Agents WITH identity → Can query registry and discover other agents (Client agents)
- Agents WITHOUT identity → Can be discovered only (Target agents)

Agents with OR without identity can be members of collections

Collection Types

Global Collection

- Organization-wide discovery
- System-defined policies apply automatically
- Discoverable by All policy

Custom Collection

- Admin-created boundaries
- Align with business or policy needs
- Department or scenario-specific collaboration

Agent Collaboration Policies

Access Policies

- Control access to protected resources
- Other agents
- Authentication endpoints
- APIs protected by conditional access

Discovery Policies

- Define which agents can be discovered
- System-defined policies (Global Collection)
- Admin-defined policies (custom boundaries)

Zero Trust Principles

 **Verify explicitly**

 **Use least privilege access**

 **Assume breach**

Multiple policy enforcement layers govern all agent interactions

Track agent performance, behavior and risk signals

Agent Observability

Addressing the challenges of distributed autonomous systems with unified telemetry and centralized monitoring

The challenge	Agents operate across distributed environments. Limited visibility increases security and compliance risk. Manual troubleshooting does not scale.
The Agent 365 approach	Unified framework built on OpenTelemetry. Consistent observability across platforms. Centralized monitoring through Microsoft admin experiences.
Enterprise outcomes	Faster detection and resolution of issues. Stronger governance and audit readiness. Measurable business impact from agent usage.

Core Observability capabilities

A comprehensive suite of tools designed to ensure end-to-end visibility and governance across the agent lifecycle

End-to-end visibility

Track agent sessions, tool usage, and AI interactions across the lifecycle

Centralized administration

Monitoring and access control through Microsoft 365 admin center

Cross-platform support

Observability applies across Microsoft and third-party agent runtimes

Security integration

Telemetry supports threat detection and investigation workflows

Governance and compliance

Unified audit data enables policy enforcement and certification readiness

Architecture & data flow

Tracing telemetry from runtime execution to centralized enterprise monitoring and security systems

Agent runtimes

Agents built using Microsoft platforms or supported third-party frameworks

01

Observability SDK

02

Captures telemetry for agent invocation, tool execution, and inference

Telemetry export

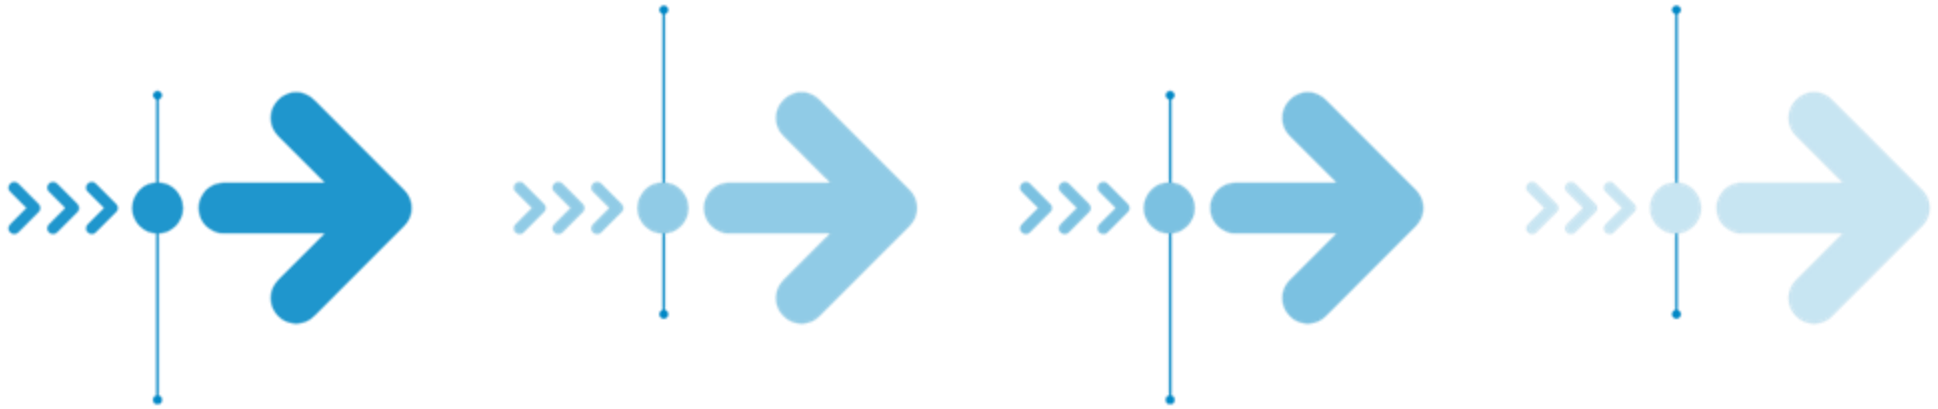

Observability data is securely exported to enterprise monitoring surfaces

03

Admin experiences

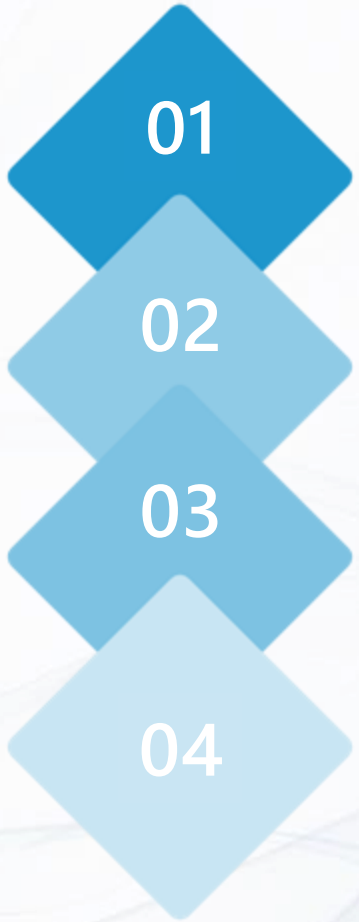

04

Microsoft 365 admin center, Microsoft Defender and Microsoft Purview for monitoring, governance, and security investigation

Lifecycle coverage

Maintaining consistent oversight and traceability from initial development through production and governance

Development
Visibility into agent behavior during build and test

Deployment
Traceability as agents move into production

Operation
Continuous monitoring of usage, performance, and risk

Governance
Ongoing compliance, audits, and certification readiness

Operational readiness and success metrics

Readiness indicators:

- Observability enabled for critical agents
- Centralized monitoring views established
- Security and compliance integrations active
- Access controls aligned to operational roles

Measure success by:

- Reduced time to detect and resolve agent issues
- Improved transparency into agent usage and value
- Increased confidence in compliance and audit outcomes

Roles and Responsibilities

Defining the collaboration between agent builders and enterprise operators to maintain secure systems

Operators

- Monitor agent health and activity centrally
- Investigate security and policy issues
- Support audits and governance requirements

01

Builders

- Enable observability as part of agent implementation
- Provide agent metadata for traceability
- Ensure consistent telemetry across agent actions

02

Overview of agent activity observation

Structured visibility scopes for agent managers and regular users to ensure transparency and privacy.

Human oversight ensures **reliable, ethical, goal-aligned** agent behavior.

Agent managers oversee all agent activity across the environment.

Regular users see only their own interactions, supporting transparency and privacy.

Where agent activity can be observed

Centralized monitoring via Microsoft Defender and session-specific tracking within Microsoft Teams.

Location	Who can observe	Description
Microsoft Defender	Microsoft 365 administrators	Monitors all activity for all Agent 365 agents.
Agent Activity tab in Teams	Users or agent managers in Microsoft Entra	Shows activity for your own sessions or sessions you manage.

How agent activity displays

Detailed session tracking initiated by triggers across Outlook, Teams, and autonomous events.

Activity is displayed **per agent per session**.

A session is one full instance of agent activity initiated by a **trigger** (email, chat, @mention).

All actions tied to one **email thread in Outlook** count as one session.

Only the **agent manager** can oversee the agent's actions in Teams.

Sessions can be **autonomous** (event- or time-based) or **conversational** (user-initiated).

Conversational session details

Application-specific grouping rules for email threads, document comments, and time-based chat sessions.

Outlook: Grouped by **email thread**

Word / PowerPoint: Grouped by **comment**

Teams: **Time-based**; session ends after 30 minutes of inactivity

What you can see in a session

A comprehensive breakdown of session triggers, actions, status, and AI-generated context summaries.

Trigger: Event that initiates activity

Action / tool call: Agent-executed action (for example, sending an email or updating a record).

Thought process: Optional reasoning explanation

AI-generated summary: Quick context overview generated by AI

Title: A short summary or label for the session

Status: Running, Completed, or Failed

Channel link: Shows where activity occurred (Teams, Outlook, Microsoft 365 Copilot)

Start time: Session start date and time

Visualize agent relationships and ecosystem fit

Microsoft Agent 365 for stakeholders

IT Administrator
Monitors agents, enforces policies, and ensures secure operations.

Security Worker
Protects agents with identity, compliance, and threat controls.

Agent Developer
Builds and extends agents using unified SDKs and tools.

Business Decision Maker
Drives secure agent adoption for business outcomes.

Information Worker
Collaborates with agents to boost productivity.

Agent Map

An **interactive visualization feature** in the Microsoft 365 admin center for **viewing**, **organizing**, and **managing agents** in your tenant.

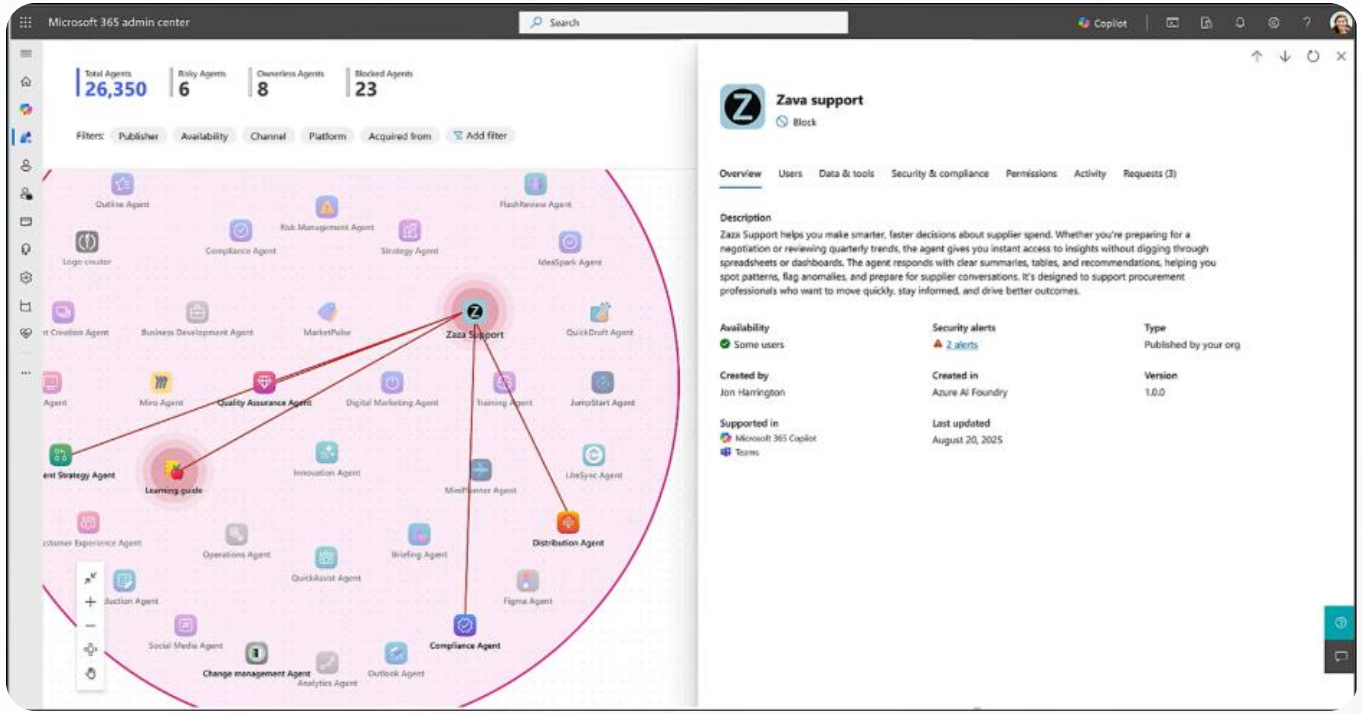

Displays agents spatially on a map to:

- Identify clusters
- Review agent metrics
- Access detailed agent information

Agent Details Available:

Publisher | Type | Platform | Version | Connectivity

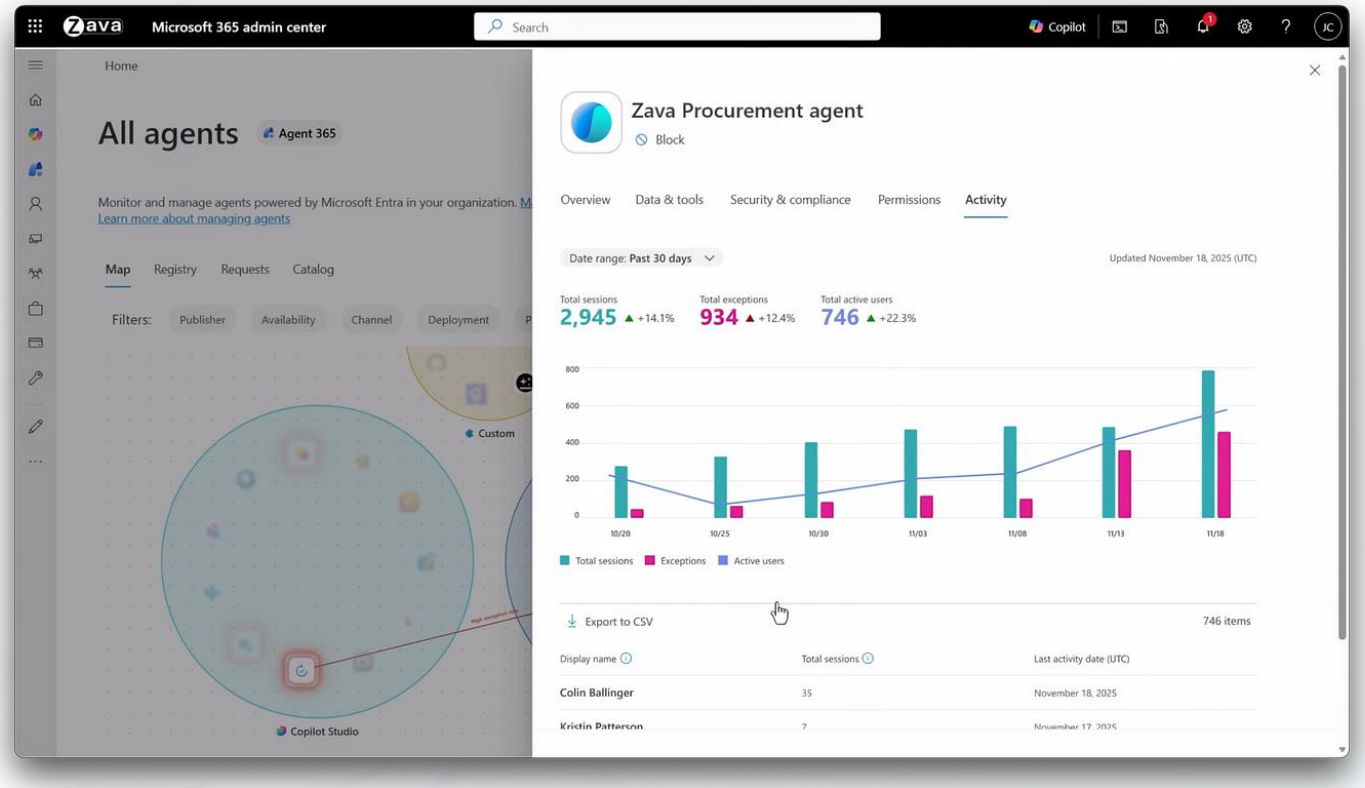

Data mirrors the Registry tab
(Visual, scalable complement for large environments)

Agent details

When you select an agent icon, you can see more details about the agent, including:

- **Details**:
  - Description.
  - Publisher.
  - Agent type.
  - Platform.
  - Last updated.
  - Version.
- **Users.**
- **Data and tools.**
- **Security and compliance.**
- **Agent activity.**

Navigating the Agent Map

Locate the Agent Map

Path: Microsoft 365 admin center → *Agents* → *All Agents*

- Eligible users see **Agent Map tab before Registry**
- Loads agents as grouped icons (by platform & metrics)
- Supports up to **800 agents**

Built-in protections

Clusters include:

- Agent Builder in M365 Copilot
- Copilot Studio
- Microsoft 365 Agents Toolkit
- Microsoft Corporation
- Others
- Provides quick visibility into platform distribution.

Trust and transparency

Filter by:

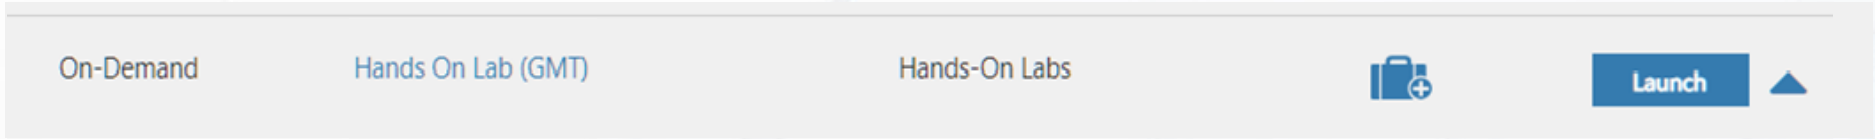

- Platform
- Publisher
- Metrics (e.g., blocked agents)

Hands-on Labs

Hands-on Lab

Please note that the labs are only open to a limited number of Microsoft partner participants and are offered on a **first-come-first-served basis**.

- **Step 1** : Click on **Launch** in the event curriculum to launch your labs

- **Step 2 :** Join the **Live session for Lab Support and Q&A Session**

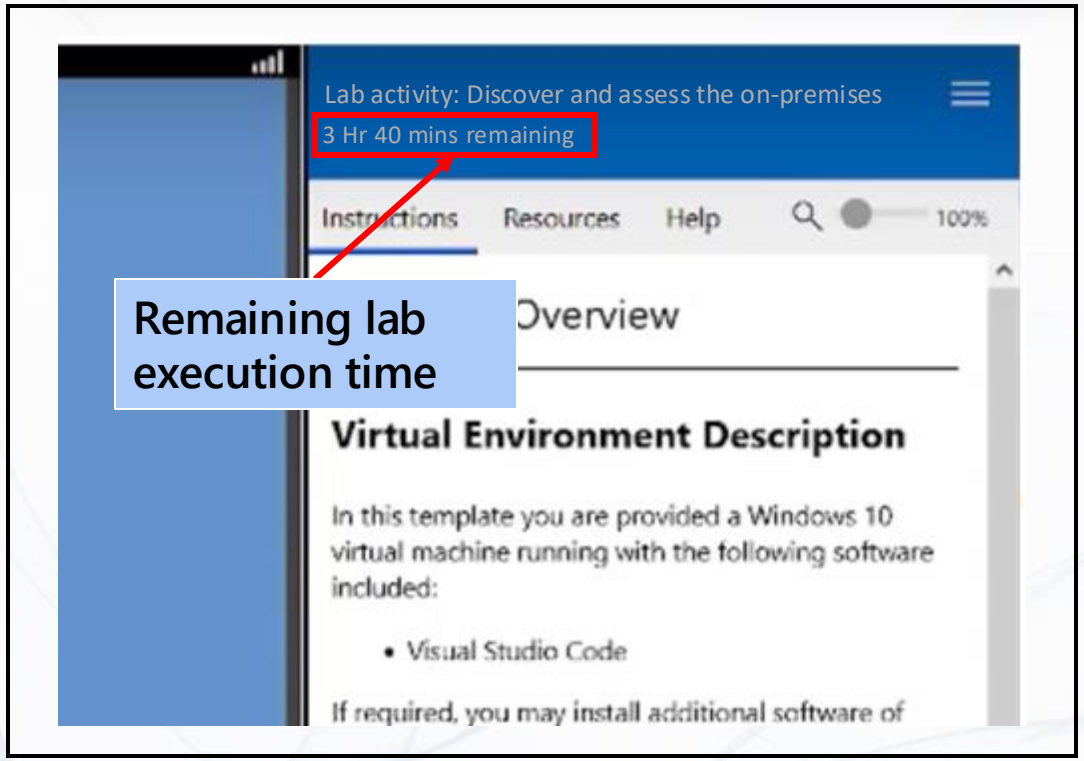

For all Lab logistical support issues, please go to: https://www.skillable.com/customer-support/ and select the "Open a Support Ticket"

Important lab information

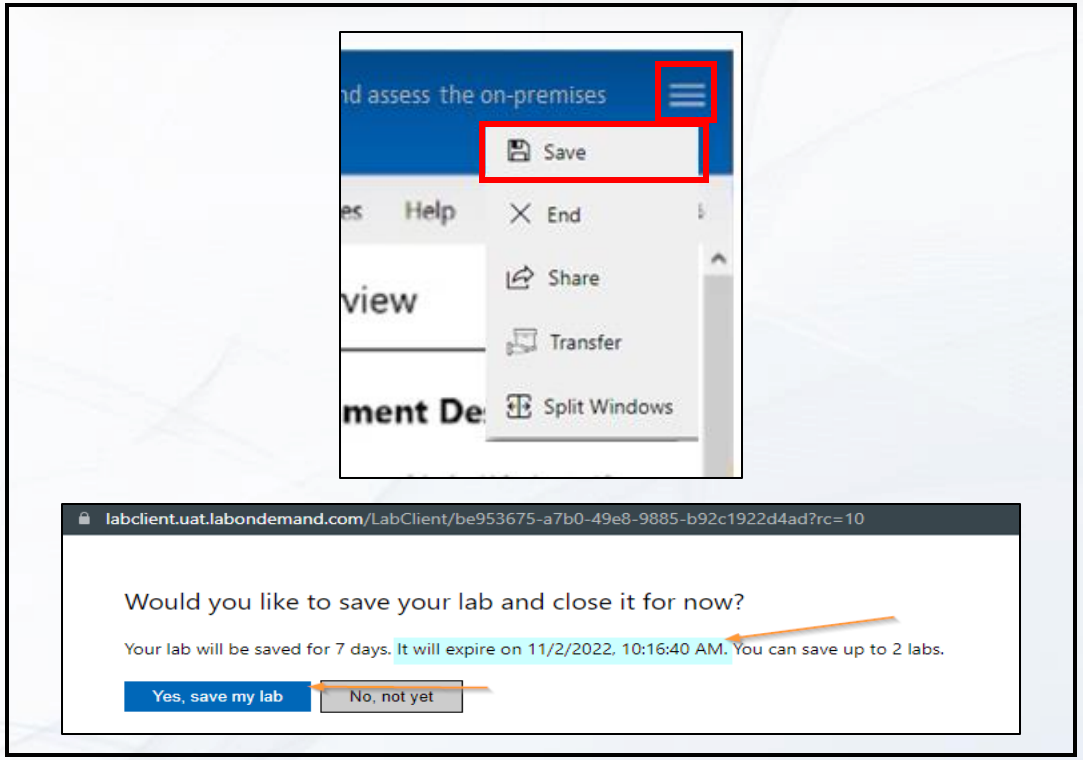

Track remaining lab execution time

- Once launched, a lab is available for active execution for the time displayed in the screenshot.

Save your Lab

- Ensure that you SAVE the lab after each break.
- Do not fail to relaunch within the specified time to avoid losing saved labs.

Once the allocated lab time expires, it can not be extended.

Hands-on Labs

Lab 00

Environment Setup

Lab 01

Agent discovery and registry management using Agent 365

Lab 02

Agent Identity configuration and monitoring in MS Entra

LevelUp | PARTNER ENABLEMENT

LevelUp: Accelerating Partner Success

On-Demand Partner Enablement

Access comprehensive training resources anytime to accelerate partner onboarding and skill development.

Be Project-Ready

Equip teams with the knowledge and tools needed to confidently deliver on real-world projects from day one.

Integrated Hands-On Labs

Reinforce learning through immersive, practical lab environments that simulate real business scenarios.

End-to-End Enablement

Deliver role-specific training that empowers sales, presales, and technical teams with the skills to drive results.

Security courses on Microsoft LevelUp

Structured curriculum from beginner to advanced implementation

INTERMEDIATE — 16 Hours

Implement, Govern and Scale Data Security with Microsoft purview in the era of AI

This course prepares security practitioners to implement and Microsoft data security across...

Course →

BEGINNER — 1.5 Hours

Position Microsoft Purview to Secure customer data in the age of AI

In this session, Microsoft partner sellers will explore to position Microsoft Purview as the go-to solution for...

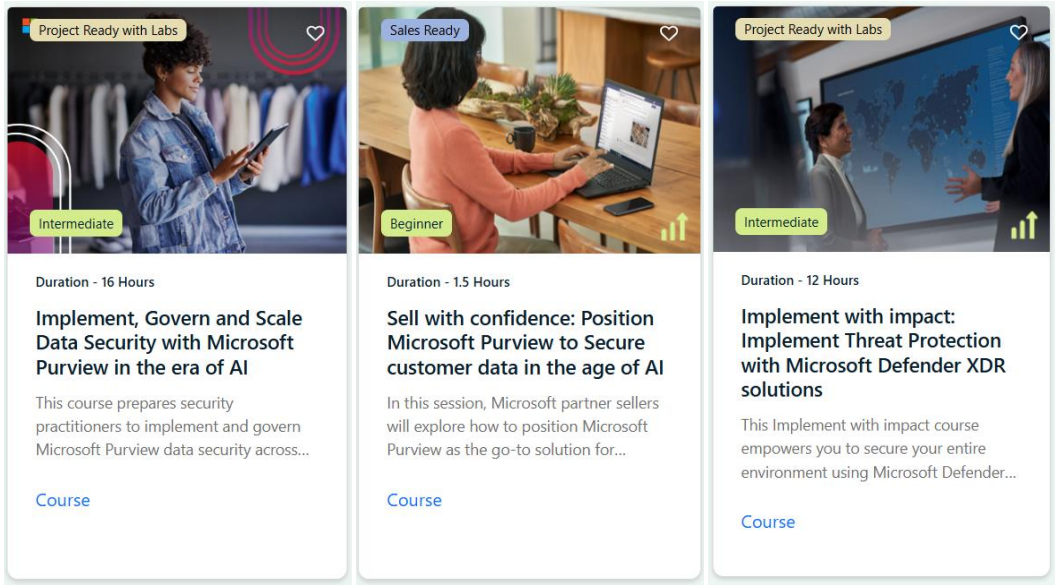

Course →

INTERMEDIATE — 12 Hours

Implement Threat protection with Microsoft Defender XDR solutions

This Implement with impact course empowers you to secure your entire environment using Microsoft Defender...

Course →

Start your learning journey today on LevelUp

ENROLL NOW

Coming up next...

Day 1

Observe & control AI agents in real time — 180 mins

Module 1: Microsoft Agent 365 as the Control Plane

- Agent 365 — unified control plane for agent security
- Agent 365 licensing (Microsoft 365 E7)
- Mapping Agent 365 controls to the Zero Trust for AI Framework
- Microsoft security infrastructure extended to AI agents

Module 2: Observe — real-time control for AI agents

Discover and inventory AI agents across your organization

- Navigating the Agent 365 overview page
- Accessing and exploring the Agent 365 registry
- Agent Lifecycle Management in Agent 365
- From users and apps to agent identities: expanding the identity perimeter
- Register and manage agents in Entra ID

Track AI agent performance, behavior and risk signals

- Agent Observability capabilities and readiness
- Implementing Agent Observability in Agent 365

Visualize AI agent relationships and ecosystem fit

- Agent map and ecosystem visibility
- Agent access patterns and trust controls

Hands-on Labs (60 min)

- ✓ Lab 00: Environment Setup
- ✓ Lab 01: Agent discovery and registry management using Agent 365
- ✓ Lab 02: Agent Identity configuration and monitoring in Microsoft Entra

Day 2

Govern and secure AI agents at Scale — 180 mins

Module 3: Govern — guardrails for AI agents and users

Onboard agents with IT oversight and security policy

- Identifying and managing AI agents using Microsoft Entra Agent ID
- Administrative relationships in Microsoft Entra Agent ID

Governing agent identities (Preview) and ownerless agents in Agent 365

Audit, logging and compliance with Microsoft Purview

Module 4: Secure — comprehensive AI agent protection

Extend Conditional Access and identity controls to agents

Protect agent interactions with Microsoft Purview

- Mitigate oversharing, leaks and risky behavior with DSPM
- Purview Data Security Investigations
- Extending data security to custom agents via Microsoft Purview SDK

Defend agents against threats, vulnerabilities and attacks

- AI Security Posture Management
- Defender integration with Agent 365 and advanced hunting
- Threat detection and response with Microsoft Defender

Hands-on Labs (45 min)

- ✓ Lab 03: Configuring Conditional Access for Agent Identities
- ✓ Lab 04: Applying Sensitivity Labels and DLP for Copilot in MS Purview

Interactive Simulated Lab Experience (15 min)

- ✓ Lab 05: Threat Hunting for AI agents using Microsoft Defender

Day 3

Extend security across the AI lifecycle — 180 mins

Module 5: AI Agent data access & sharing risks

- How agents access and share content
- Shadow AI Discovery in Global Secure Access
- Prompt Injection Protection
- MCP and tooling server access

Module 6: Security Dashboard for AI

- Unified AI risk visibility across Entra, Defender and Purview
- Risks, recommendations and remediation actions

Module 7: Security Copilot & Microsoft Security Store

- Security Copilot for agentic AI
- Extending SOC capabilities with Security Copilot agents
- Discovering and deploying agents via the Security Store
- Responsible AI principles across your agent strategy

Module 8: Foundry Control Plane — AI lifecycle governance

- Governing the AI lifecycle with Foundry Control Plane
- Continuous monitoring and agent evaluation
- Probing agent vulnerabilities with AI Red Teaming
- Tracing agent actions for visibility and accountability
- Enforcing safe AI outputs with Azure AI Content Safety

Hands-on Labs (60 min)

- ✓ Lab 06: Oversharing Assessment and Remediation using DSPM in MS Purview
- ✓ Lab 07: Audit, Retention, and Security Copilot in MS Purview
