{Presenter 2}

Module 1

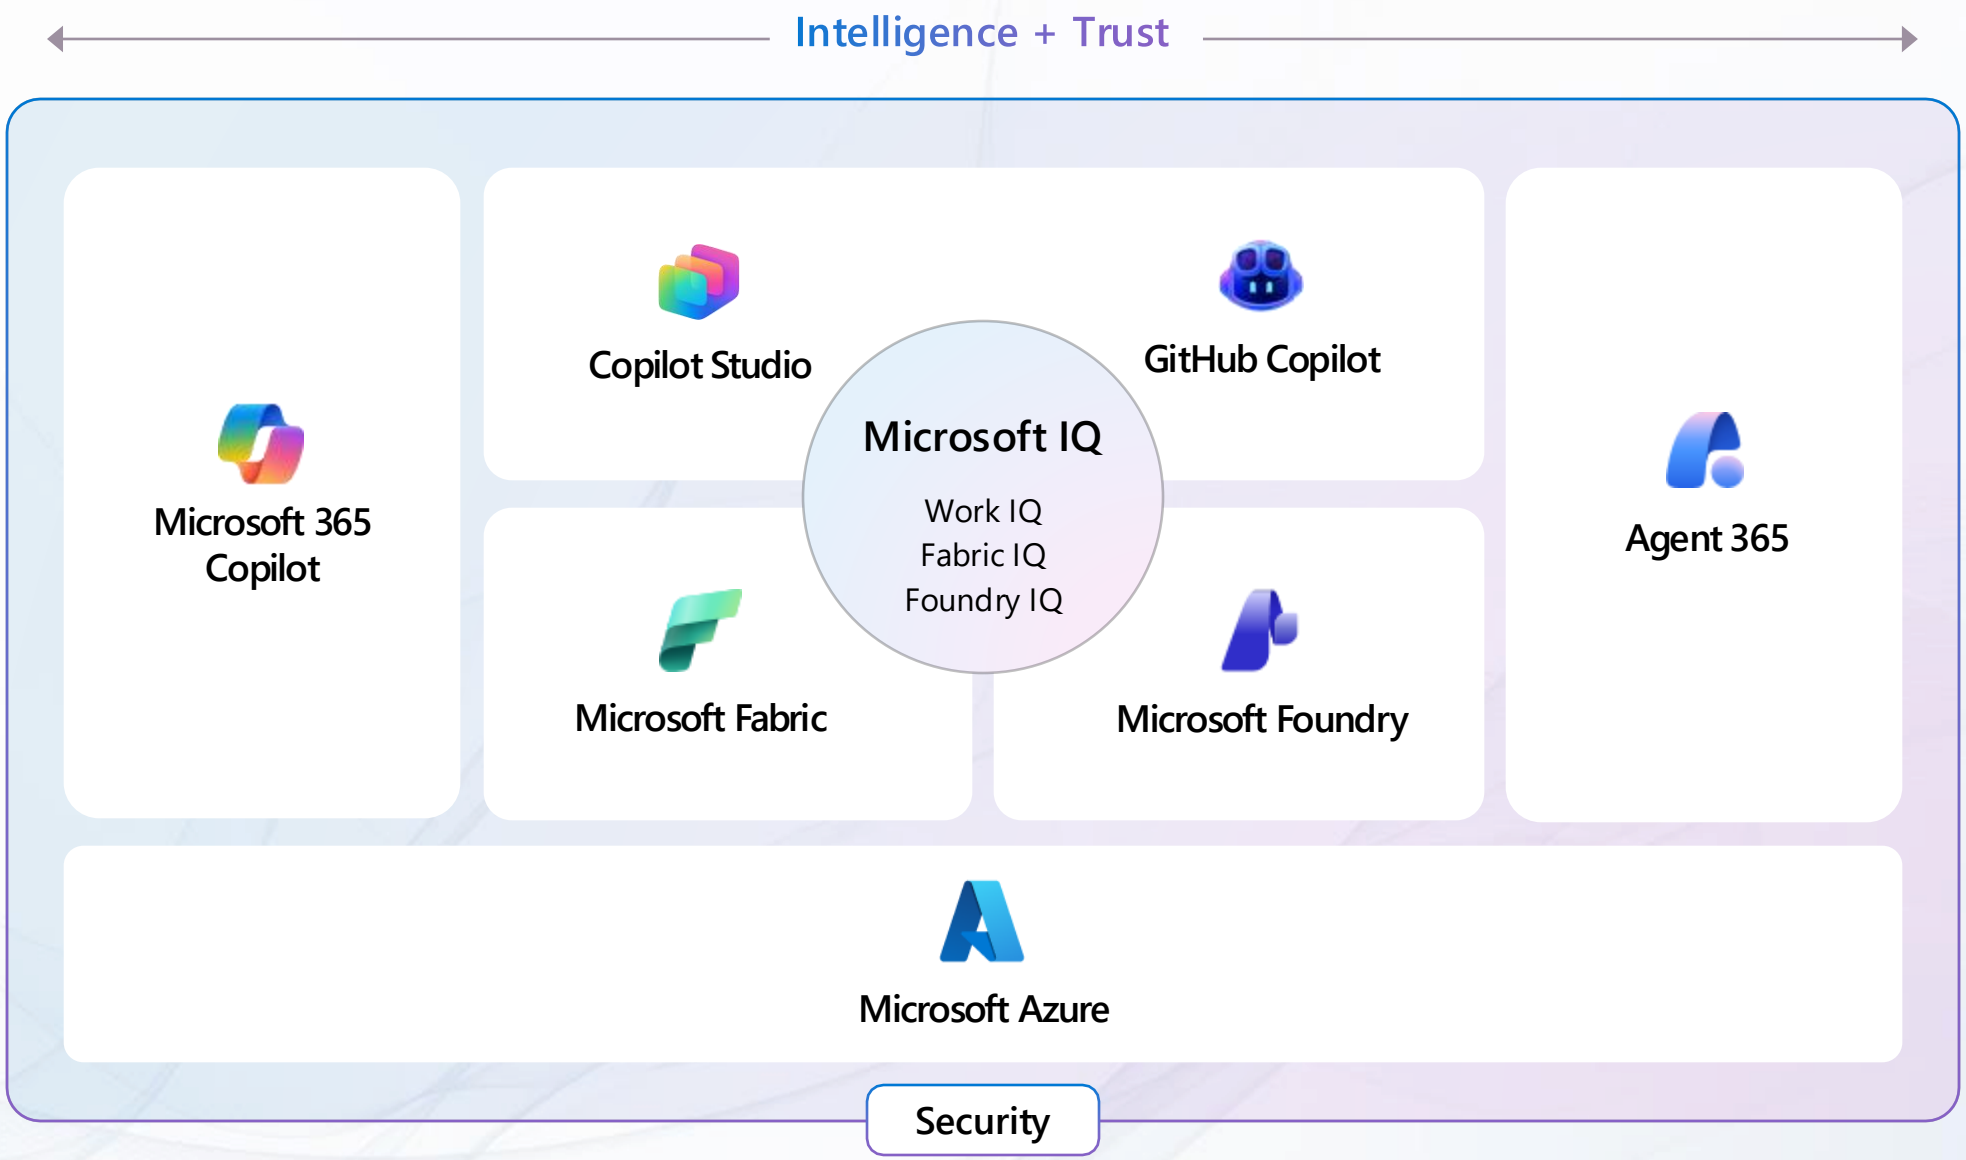

Microsoft Agent 365 as the Control Plane

Agent 365 — unified control plane for agent security

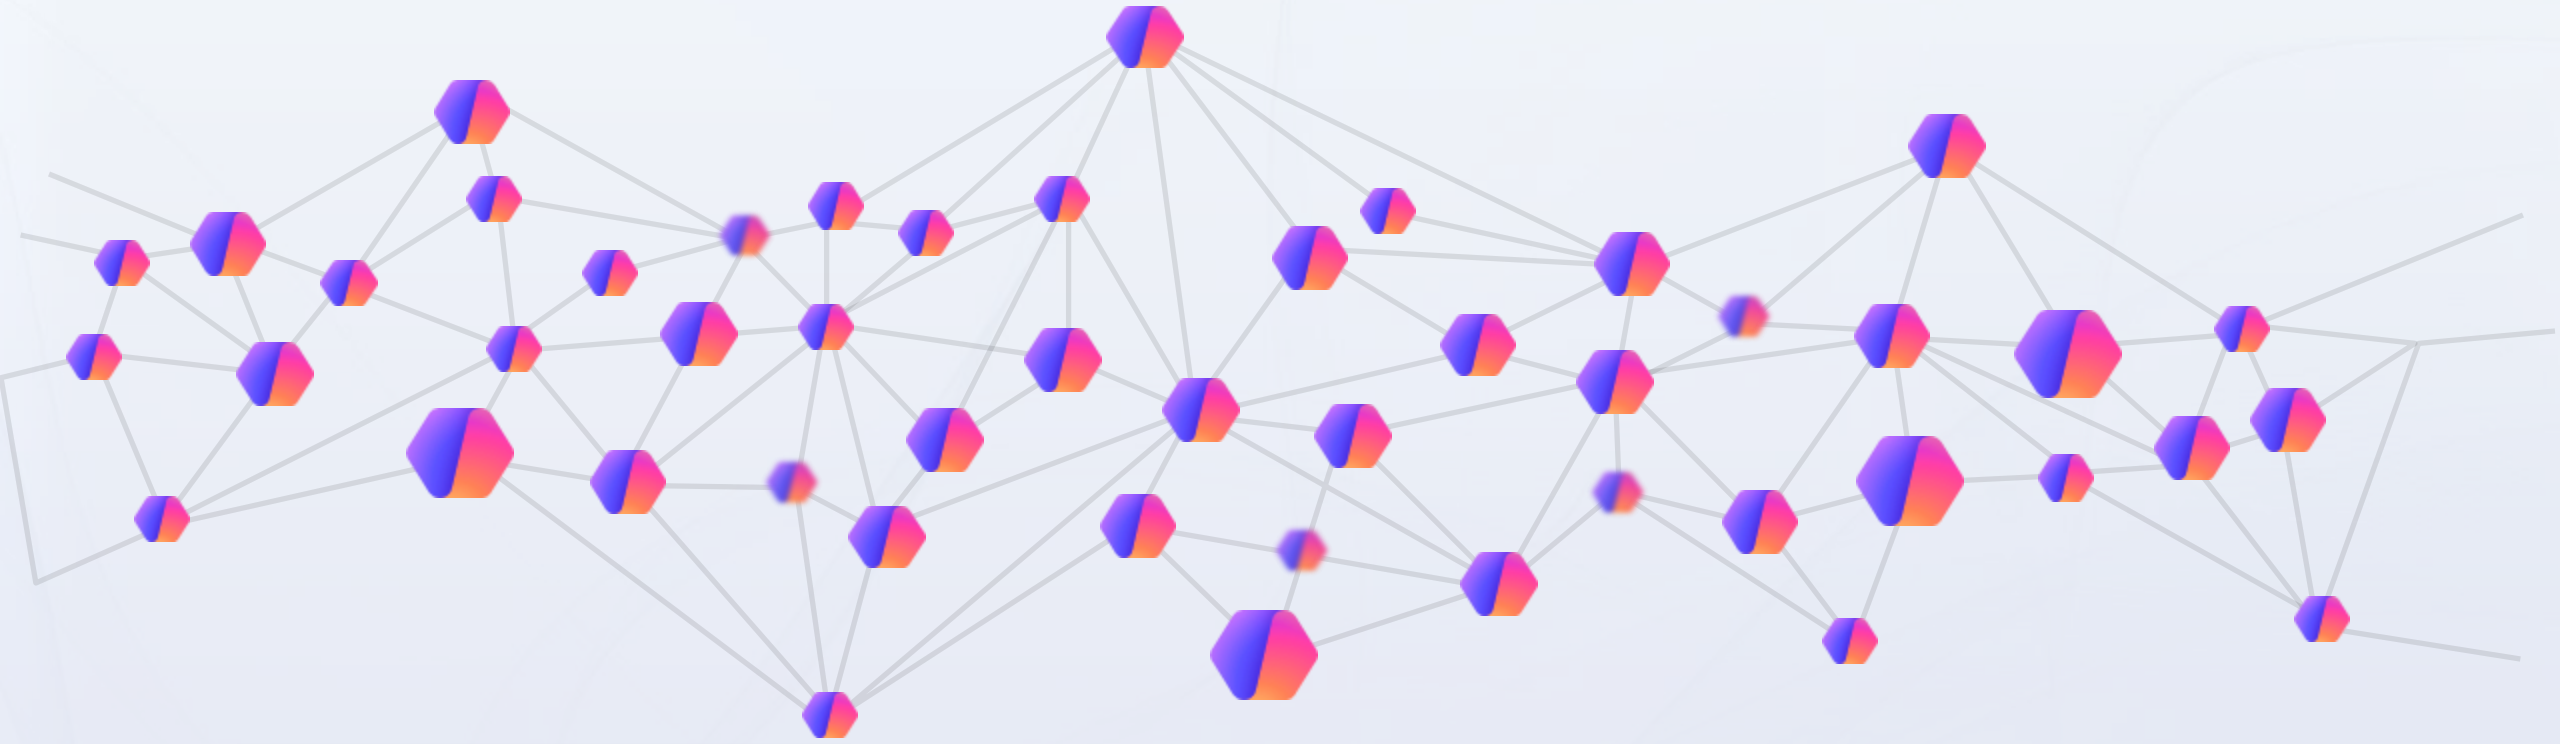

Look beyond models and chips.

What scales AI is *your* Intelligence + Trust.

Microsoft IQ Platform

Is your organization ready?

Can we track and monitor all agents? Do we know what agents are doing?

Do we have proper guardrails for agents and people that interact with them?

Are agents protected? Do they have the right access? Can they leak sensitive data?

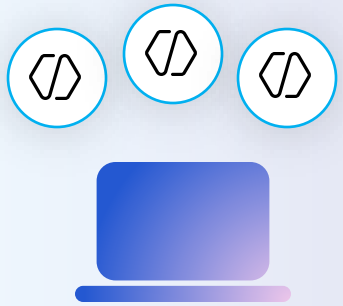

The compounding impact of agent sprawl across SaaS, endpoints, and cloud

SaaS agents

- What agents are employees using via Internet?
- What are the risk levels of these SaaS agents
- What information is being shared and with these agents?

Endpoint agents

- What agents do employees have installed on their endpoints?
- What security guardrails are built in the agents?
- What access and permissions are employees granting to the agents?

Cloud agents

- What agents are being developed on various cloud and AI platforms?
- What vulnerabilities can be potentially exploited by attackers?
- What built-in guardrails does the platform provide?

Microsoft Agent 365

The control plane for agents

Observe

Monitor and manage agents in real time

- **Registry**: Register and track every agent
- **Discovery**: Detect popular agents to control Shadow AI
- **Mapping**: Visualize agent usage and behavior
- **Analytics**: Measure agent adoption, performance, and ROI
- **Role-specific oversight**: Extend agent visibility to security and business leaders

Govern

Establish guardrails for agents and users

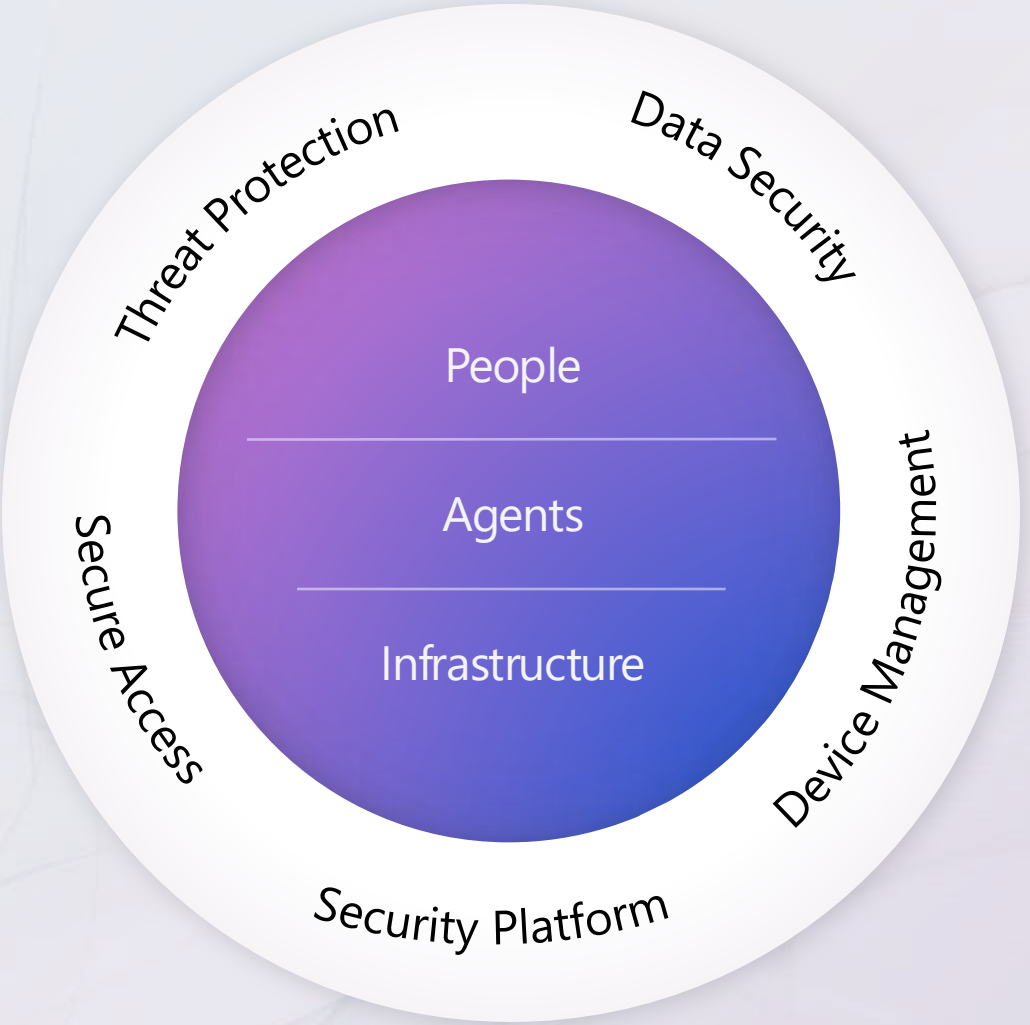

- **Onboarding**: Bring agents under control from day one
- **Integration management**: Control what agents can access and do
- **Lifecycle management**: Automate agent lifecycle policies
- **Audit and logging**: Strengthen traceability and be audit ready
- **Data compliance**: Meet AI regulations and policies

Secure

Protect agents comprehensively

- **Access control**: Protect agent identities and access
- **Data security**: Prevent oversharing and data leaks
- **Threat protection**: Defend against threats and vulnerabilities

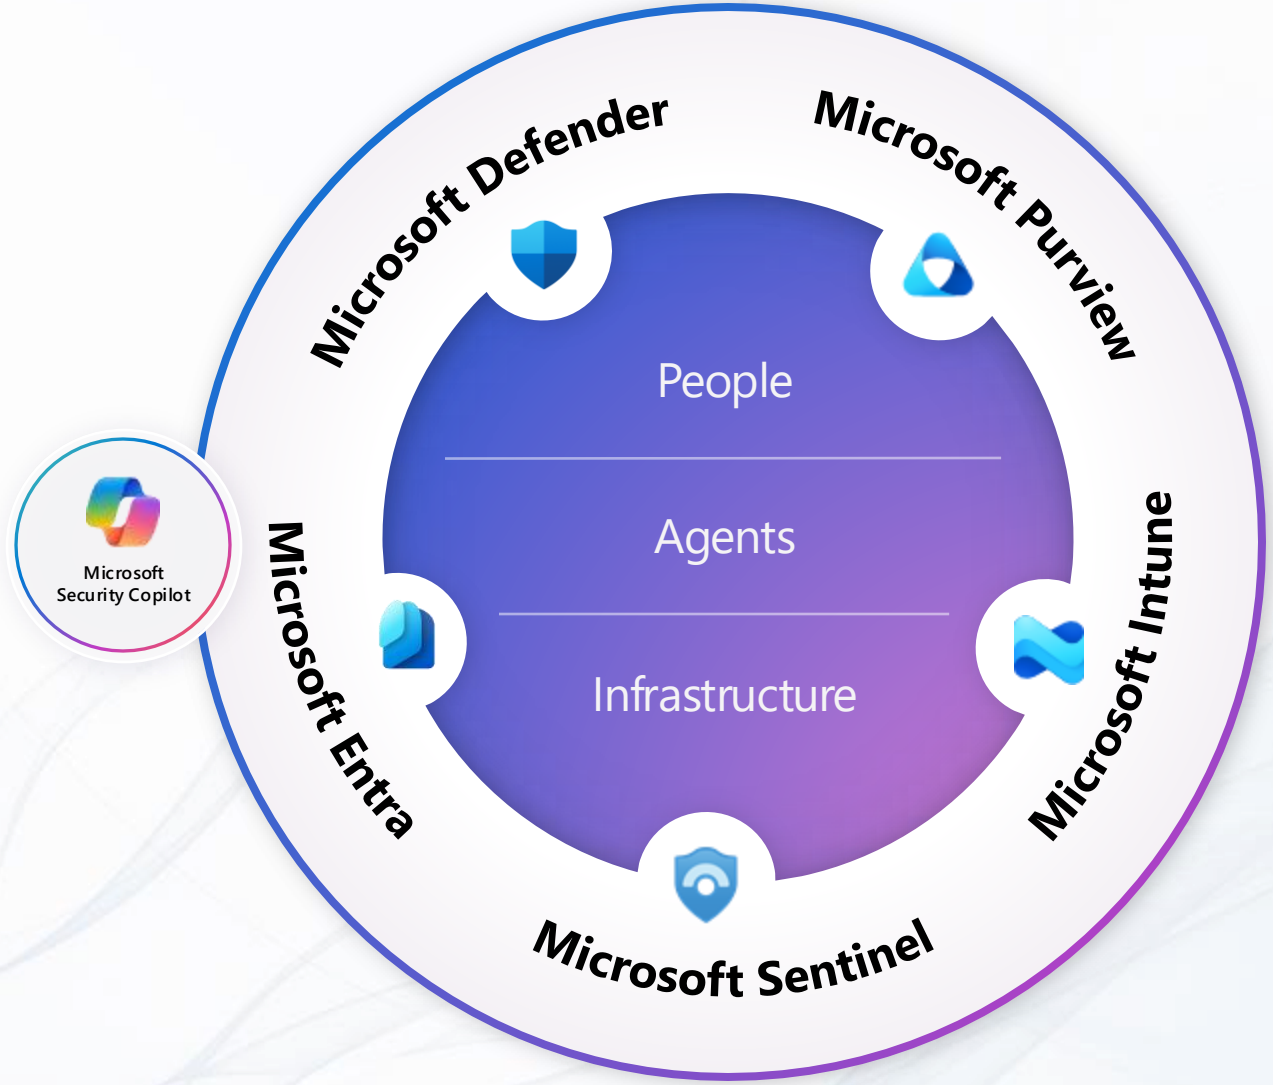

Build on a secure foundation

Secure agents. Secure foundations

[1]Microsoft internal data. October 2025

AI first end-to-end Security platform

Microsoft Agent 365

The control plane for agents

Observe

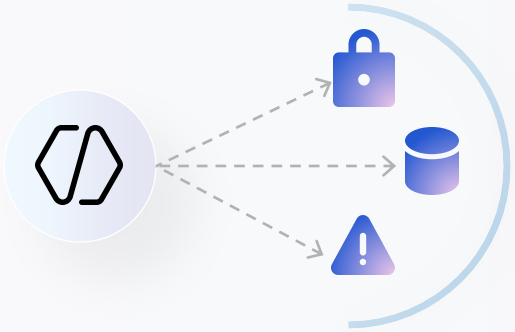

Monitor and manage agents in real time

Govern

Establish guardrails for agents and users

Secure

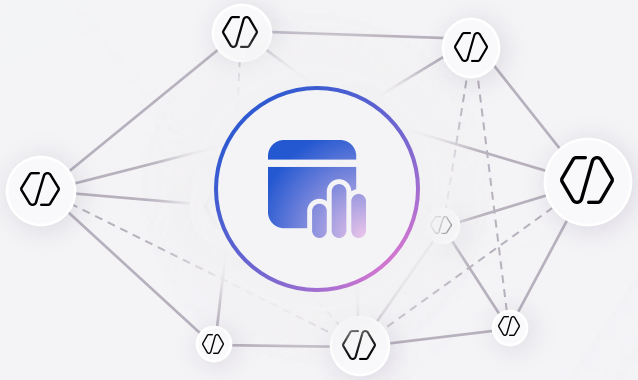

Protect agents comprehensively

Mapping Agent 365 controls to the Zero Trust for AI framework

Verify explicitly	Use least privilege access	Assume breach

Observe

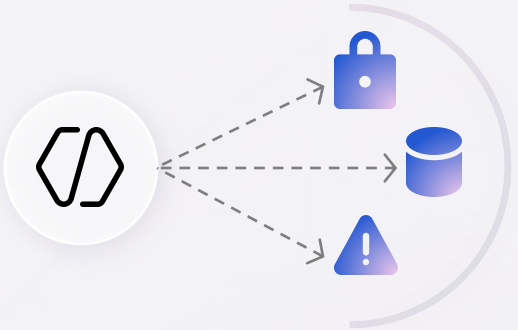

Monitor and manage agents in real time

Govern

Establish guardrails for agents and users

Secure

Protect agents comprehensively

Observe

Register and track agents in one place

Get a complete, unified view of agents across Microsoft platforms, ecosystem partners, and connected third-party agent platforms, including any agents you register yourself.

Detect popular agents to control Shadow AI

Discover and track local AI agents on user devices, so you can see where they run

Measure agent effectiveness

Track key agent metrics, including adoption, quality, performance, speed of task completion and impact to make more informed decisions.

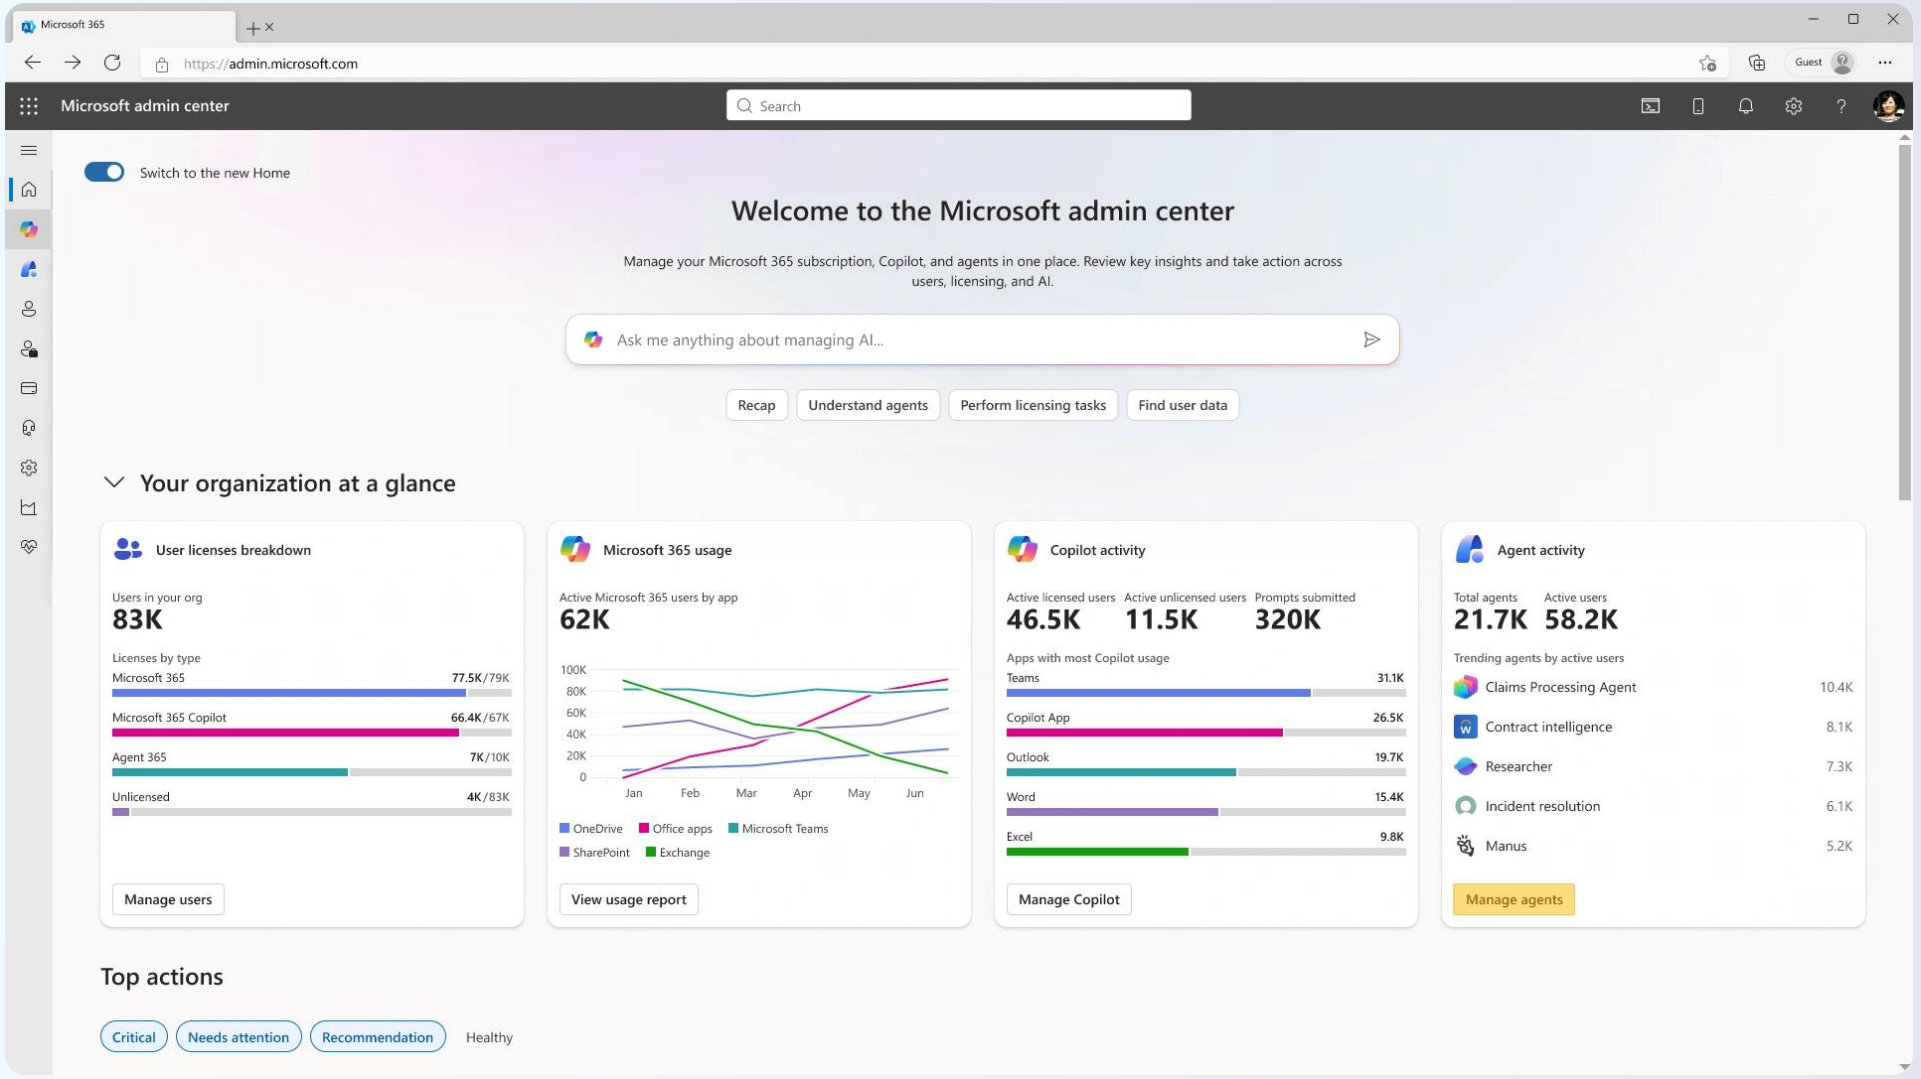

Extend oversight with role-based reporting

Build extended visibility across your organization through role-based reporting for Security leaders to manage agent risks and Business leaders to monitor business metrics and impact.

Visualize agent usage and behavior

See how agents fit into the broader ecosystem, connect with other agents, and perform over time to simplify monitoring and accelerate issue identification.

Demo: Observe agents and prevent sprawl

Govern

Bring agents under control from day one

Onboard and approve agents through one IT-controlled flow, applying policy templates so every agent starts governed and compliant.

Control what agents can access and do

Enforce least-privilege access by controlling which users, data, and tools agents can use. Limit access to only the resources and other agents they need.

Automate on-going agent governance

Leverage rules-based agent management to automatically enforce lifecycle policies, such as expiring inactive agents, flagging ownerless agents, or blocking risky agents.

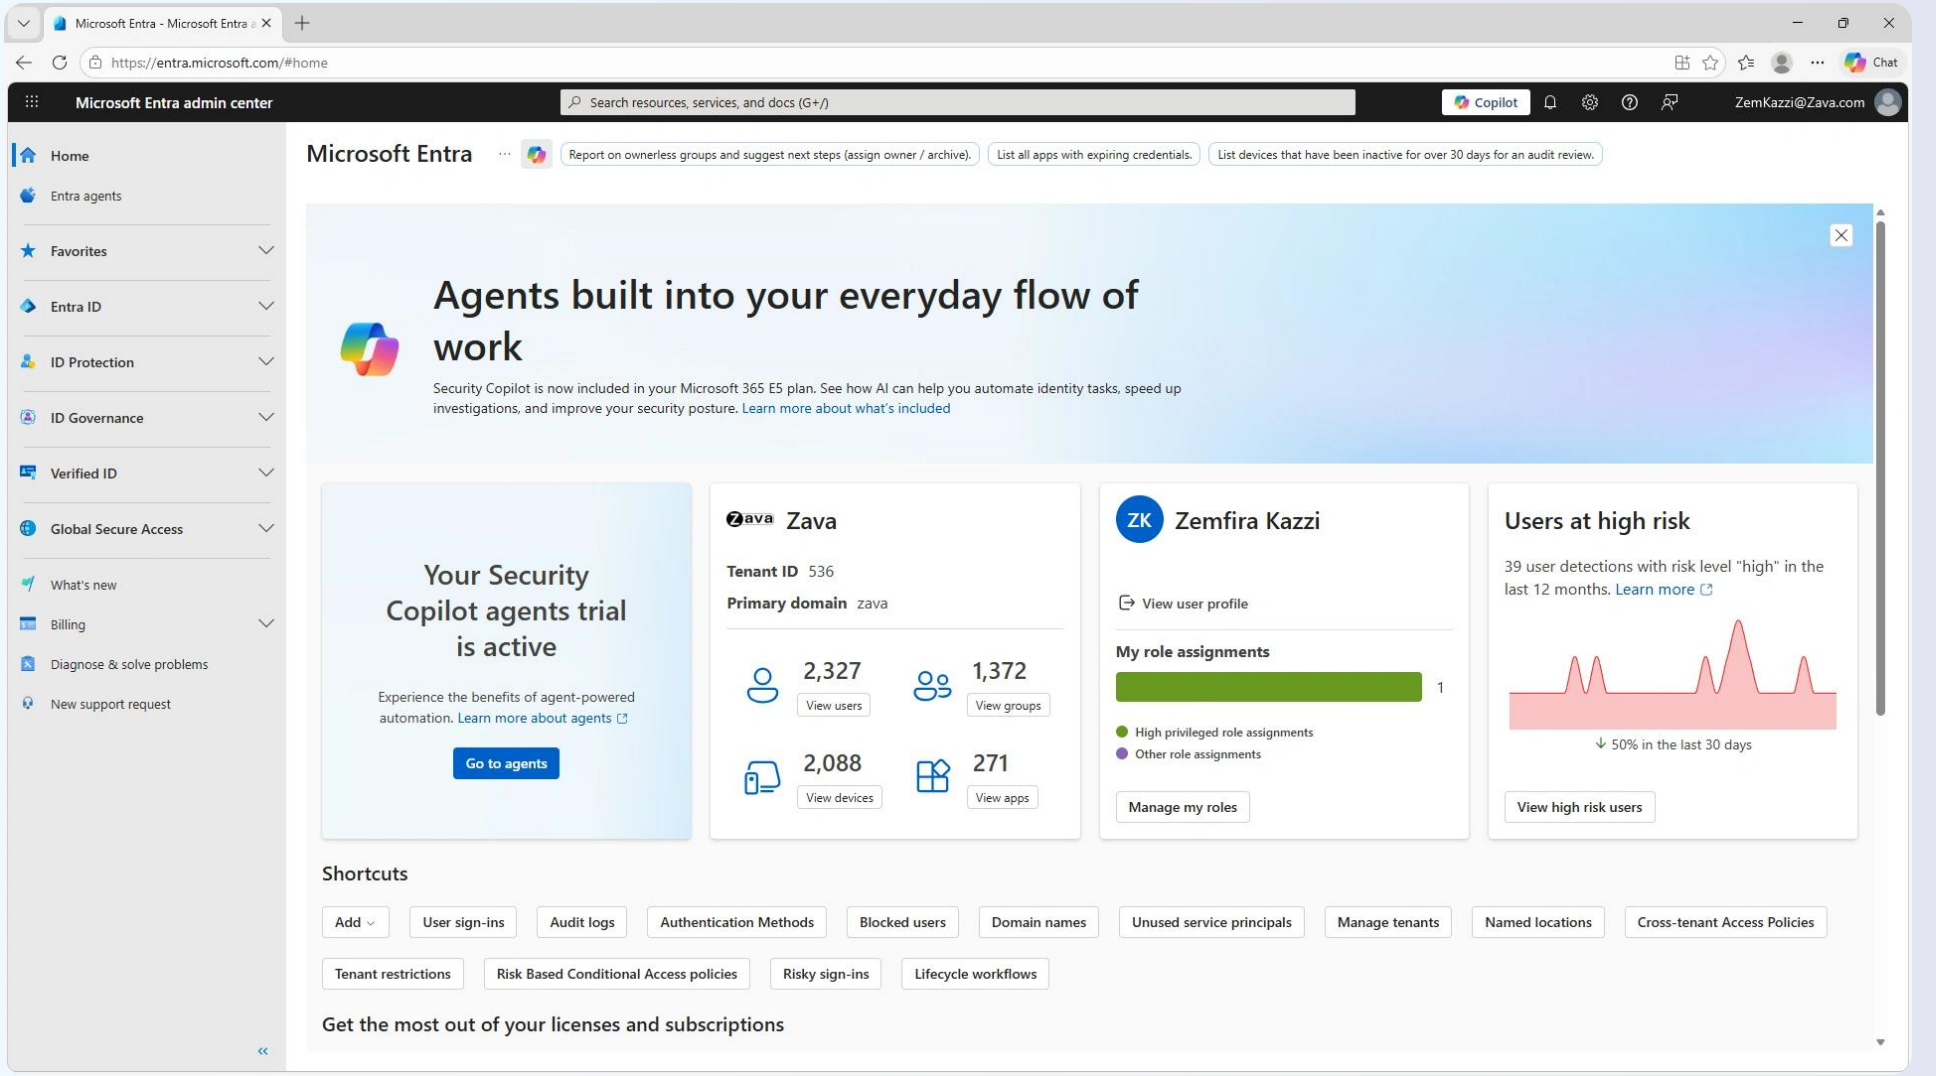

Be audit-ready from the start

Strengthen visibility and traceability of agent actions and interactions, including who approved an agent, what it accessed, and how it behaved.

Reduce compliance and safety risks

Establish data safety and compliance controls to detect, retain, and investigate unethical agent interactions.

Demo: Onboard agents in Microsoft Agent 365

Secure

Control agent access and start secure

Protect agent identities and prevent breaches by extending conditional access and identity protection from users to agents.

Block OpenClaw

Apply policy-based controls to block the most common ways OpenClaw runs on managed devices.

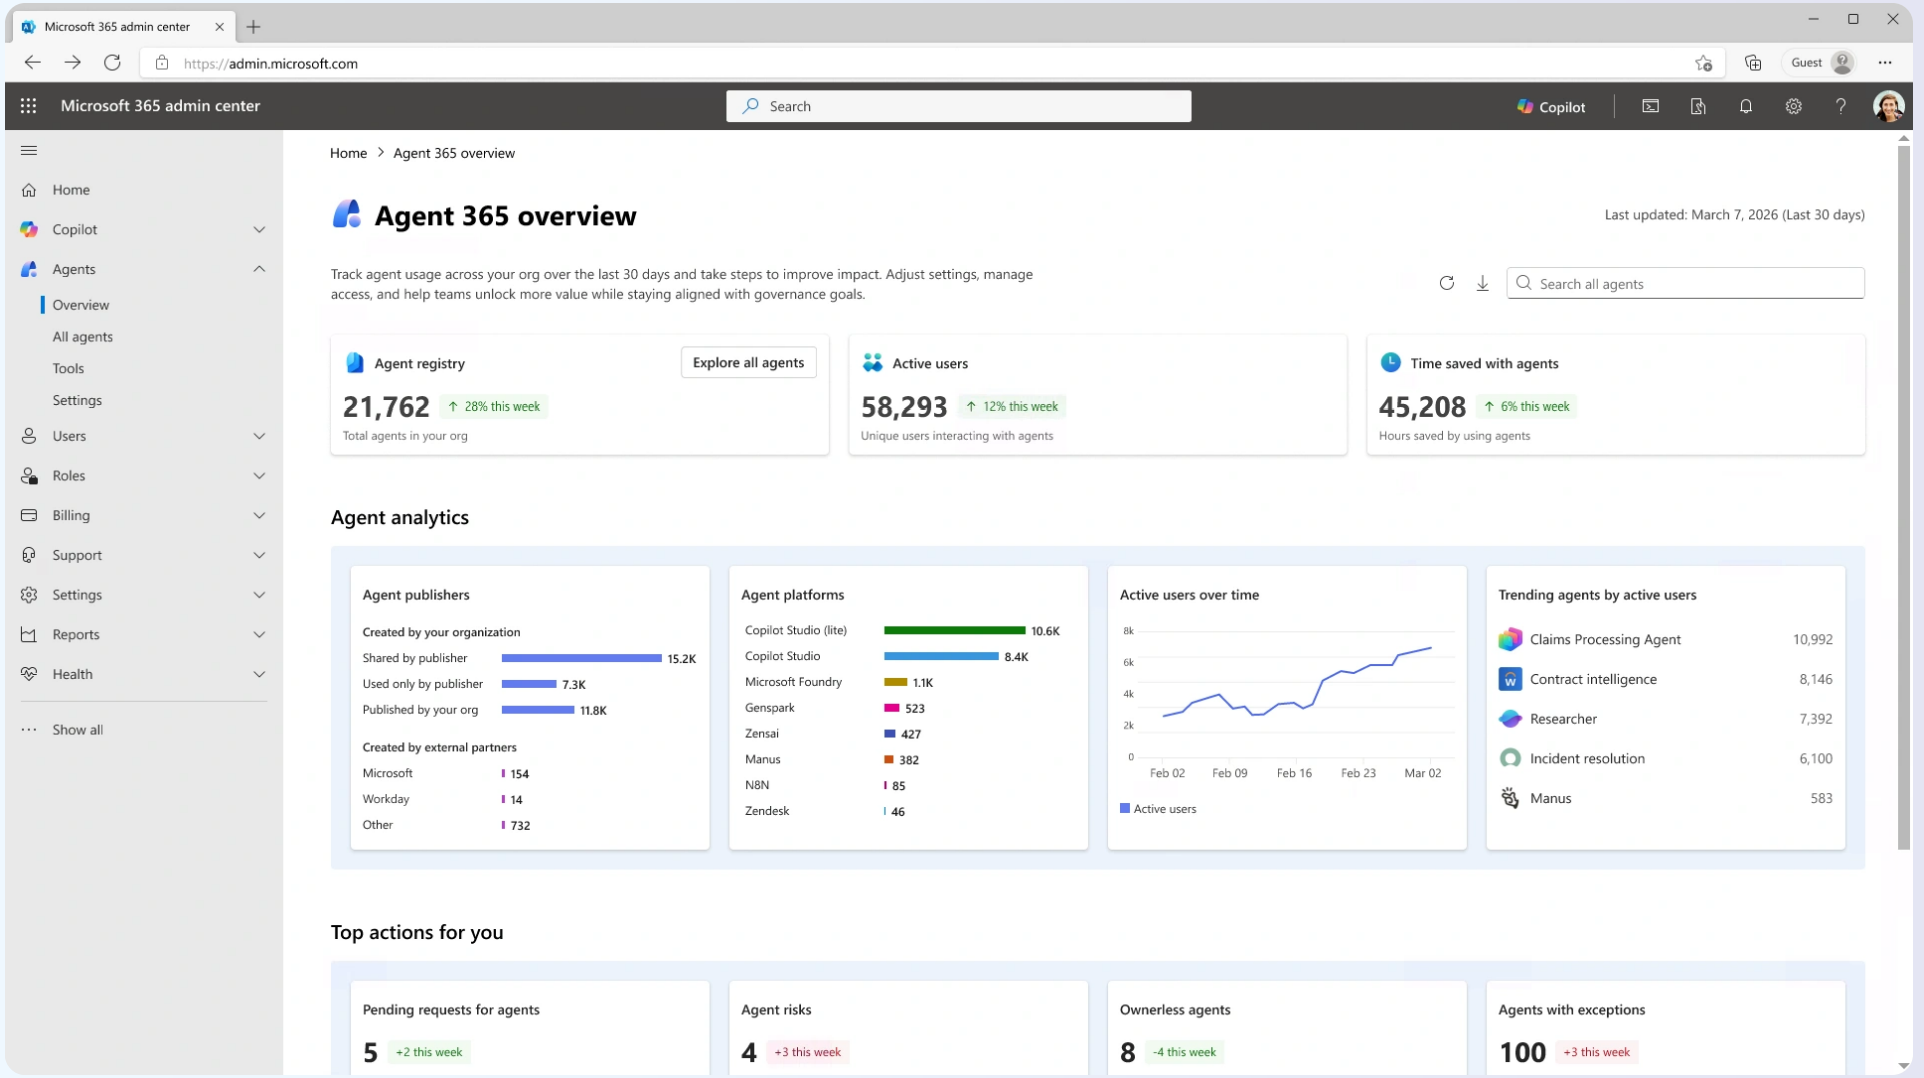

Prevent oversharing and data leaks

Gain visibility into AI-related data exposure, protect the data agents create and access from oversharing, leaks, and risky behavior.

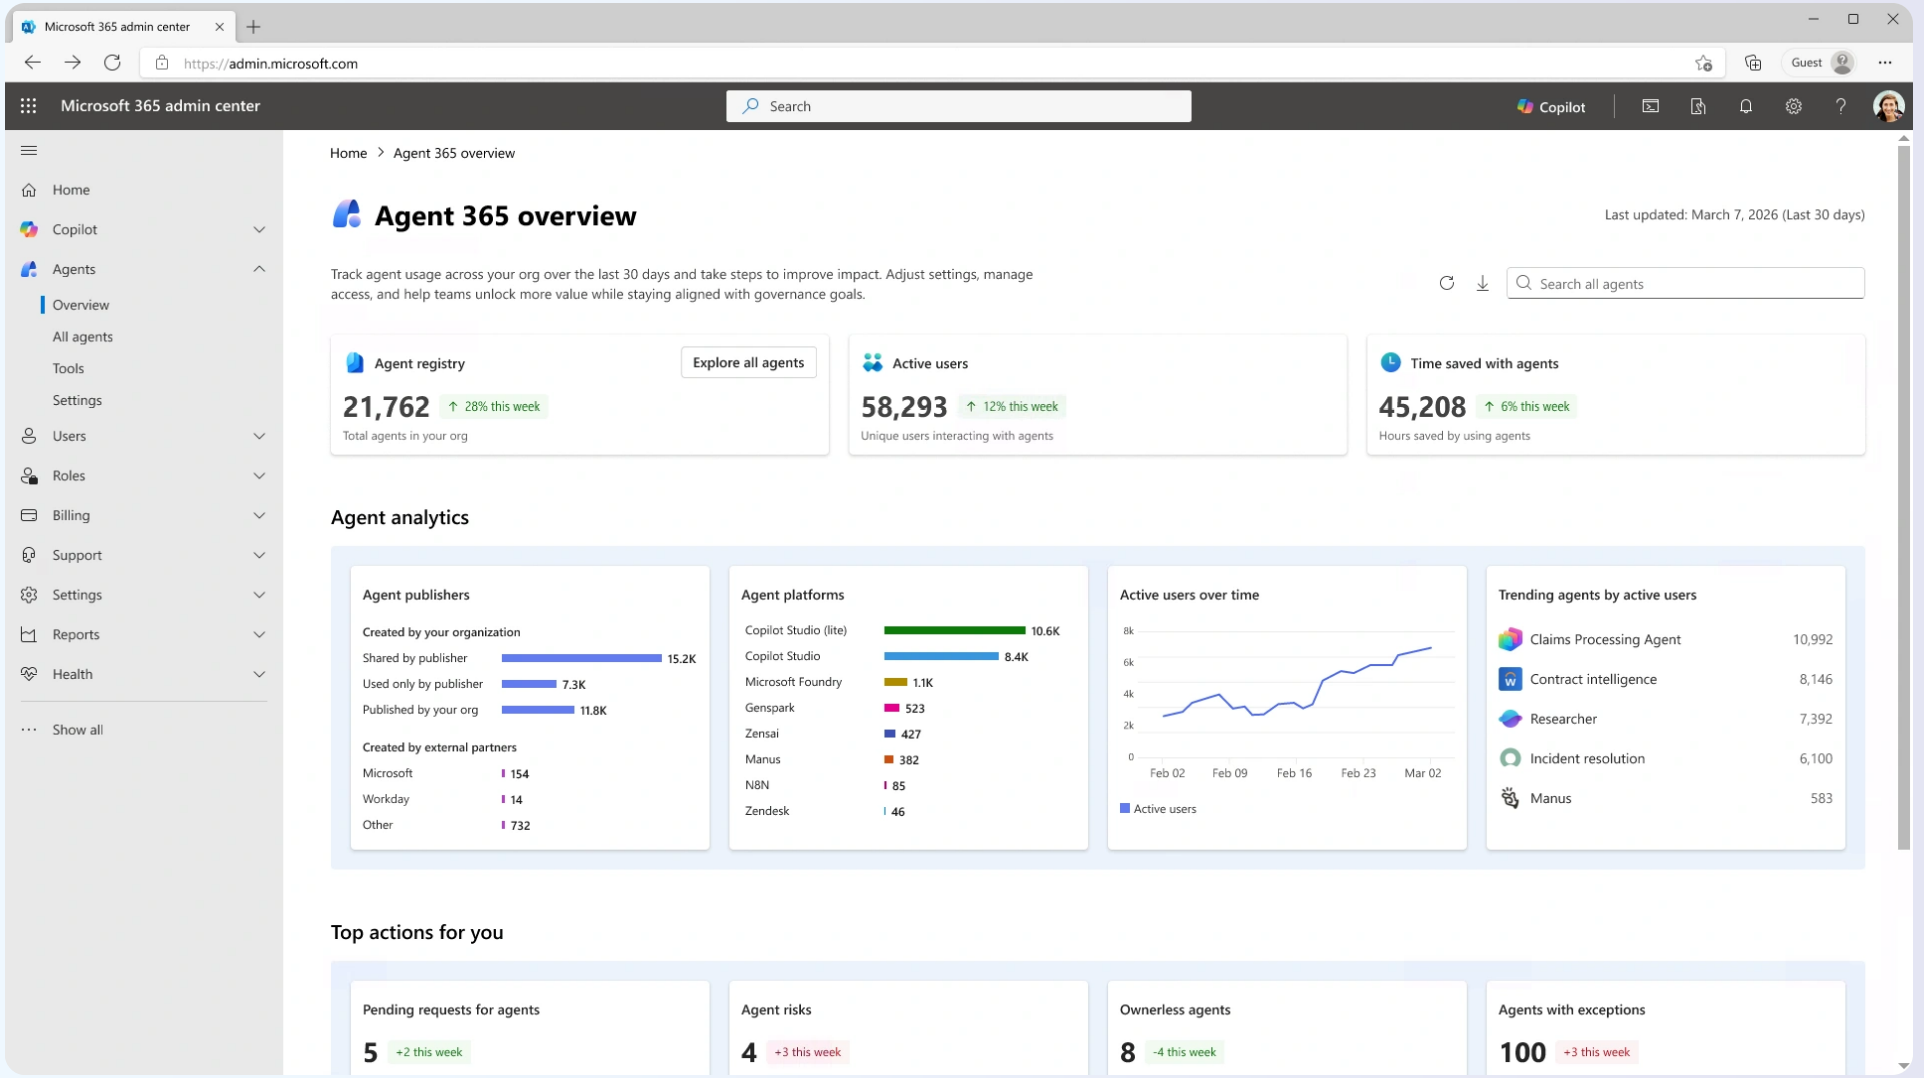

Defend against AI threats and vulnerabilities

Protect agents from threats and vulnerabilities, and adversarial attacks. Detect, investigate and remediate incidents quickly, with visibility into attack paths.

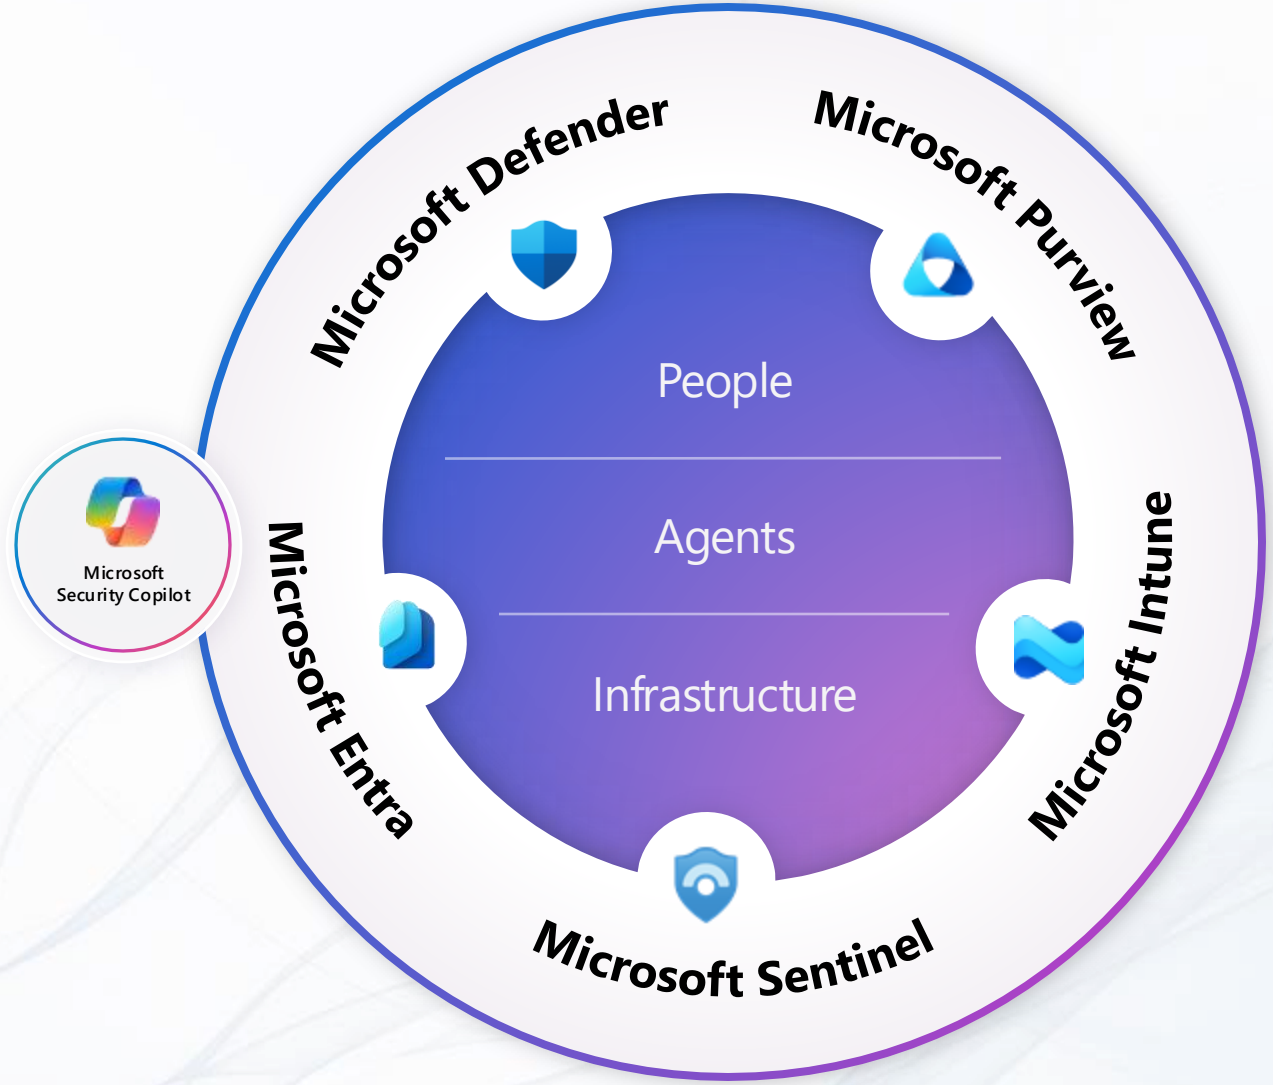

Demo: Prevent data oversharing and leaks

Demo: Defend against AI threats and vulnerabilities

AI first end-to-end Security platform

Microsoft 365 E7:
The Frontier Suite

		Microsoft 365 E5 (w/Teams)	Microsoft Entra Suite	Microsoft 365 Copilot	Microsoft Agent 365	Microsoft 365 E7 (w/Teams)
		$60[1]	$12	$30	$15	$99[2]
Productivity	**Microsoft 365 apps:** Create and refine work across the apps people know and love	●				●
	OneDrive & SharePoint: Share, manage, and collaborate on content across teams	●				●
	Teams: Meet, chat, and call	●				●
	Windows: Secure, manage, and run work across enterprise devices	●				●
	Teams Phone: Cloud-based phone system built into Teams	●				●
	Power BI Pro: Turn data into shared, actionable insights	●				●
Security & Compliance	**Entra:** Identity and access management	● P2	● Suite			● Suite
	Defender: Endpoint, email, identity, and cloud threat protection	●				●
	Purview: Data security and compliance (ex. information protection, DLP, insider risk)	●				●
	Intune: Endpoint and device management	●				●
AI	**Copilot:** AI built into core productivity apps and Teams	○		●		●
	Copilot Studio & Agent Builder: Build, deploy, and scale custom AI agents	○ Metered		●		●
	Agent flexibility: Choose from pre-built agent library or access 3P marketplace			●		●
	Work IQ: AI grounded in personal and work data (incl. 3P data via connectors)	○		●		●
Agent Management	**Agent 365:** Observe, monitor and manage agents in real time				●	●
	Agent 365: Govern agents throughout their lifecycle				●	●
	Agent 365: Secure and protect all agents across your enterprise				●	●

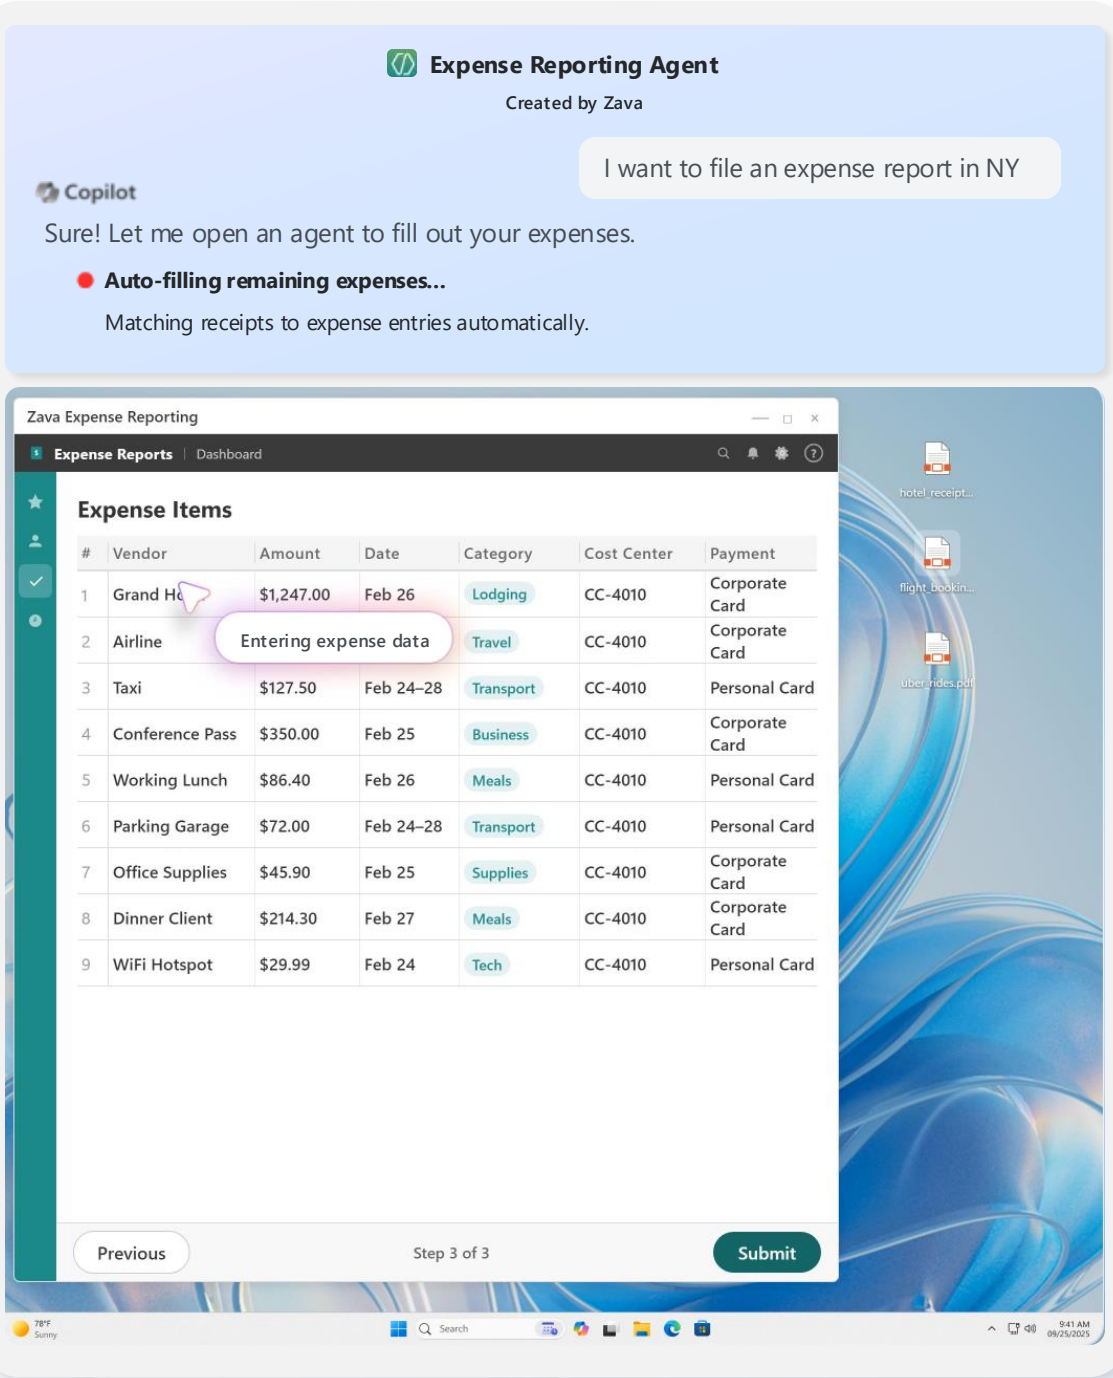

1: $51.45 w/o Teams | 2. $90.45 w/o Teams

Introducing
Windows 365 for Agents

Windows 365 provides a secured, managed Windows experience in the cloud, giving organizations control and flexibility at scale.

Windows 365 for Agents extends this platform to AI agents and agent makers—providing secured, on-demand Cloud PCs built specifically for agent workloads, so agents use compute resources only when work is happening, without the overhead of managing infrastructure.

Windows 365 for Agents is a separate offering designed for agents, not a replacement for Windows 365 Enterprise or other Windows 365 offerings.

How agents run on Windows 365 for Agents

Cloud PCs only provisioned when agent-assigned tasks run, while IT retains full control over security and compliance.

- **Compute starts only when tasks run**, enabling fast start-up and efficient use of resources.
- **The agent lifecycle is fully managed by the platform**, so teams don't have to provision manually.
- **IT retains visibility and control,** with the ability to monitor sessions and intervene when needed.
- **Cloud PCs are billed based on active task execution** — helping avoid costs associated with idle infrastructure.

1. **Provision**
   IT creates provisioning and security policies, determining OS type and Cloud PC configurations available.
2. **Check out**
   Agent checks out a Cloud PC on demand when a task is assigned.
3. **Execute**
   Agent runs its workload inside the isolated Cloud PC—opening apps, navigating UIs, and processing data.
4. **Check-in**
   The Cloud PC is checked back in, cleaned, and made available for the next agent.

How Windows 365 for Agents & Microsoft Agent 365 work together

Microsoft Agent 365

Determines *what* work an agent should be able to perform and *how* it fits into the broader business workflows, using shared organizational policies and identity to govern behavior and access.

Windows 365 for Agents

Defines where that work executes, providing Cloud PCs to enable agents to operate inside their own desktops and applications, including UI-driven and non-API systems, within a fully managed and auditable environment.

Module 2

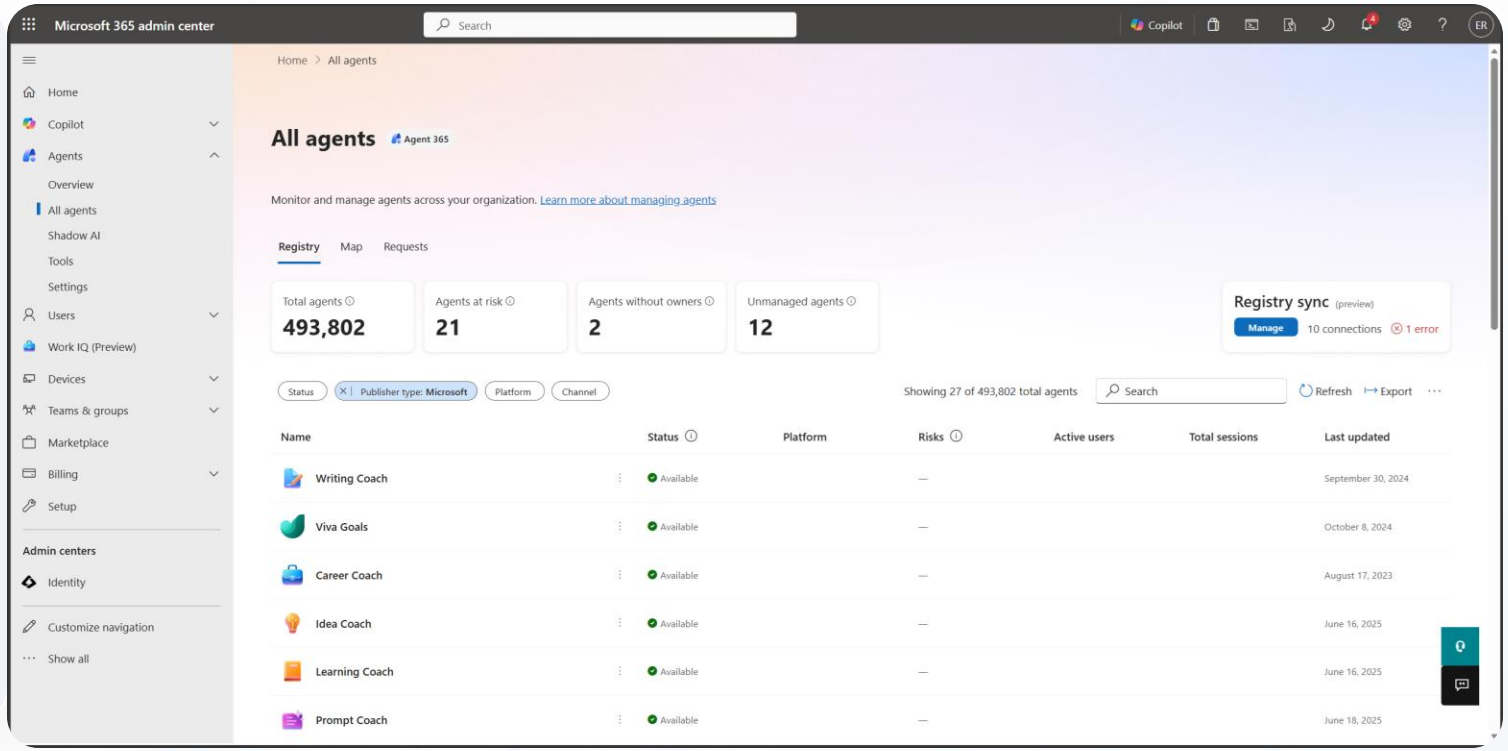

Observe — real-time control for agents

Discover and inventory agents across your organization

Agent Registry in the Microsoft 365 admin center

The agent registry provides a centralized view of all agents available for your organization and helps you monitor, manage, and govern agents for your organization.

- Agent types
- Agent registry summary
- Agent registry actions
- Agents without owners
- Risks column in the Agent Registry
- Upload custom agent
- Manage pinned agents

Agent types

All agents that are available to your organization

Microsoft agents

Agents built and maintained by Microsoft.

External partner-built agents

Agents built by trusted non-Microsoft developers

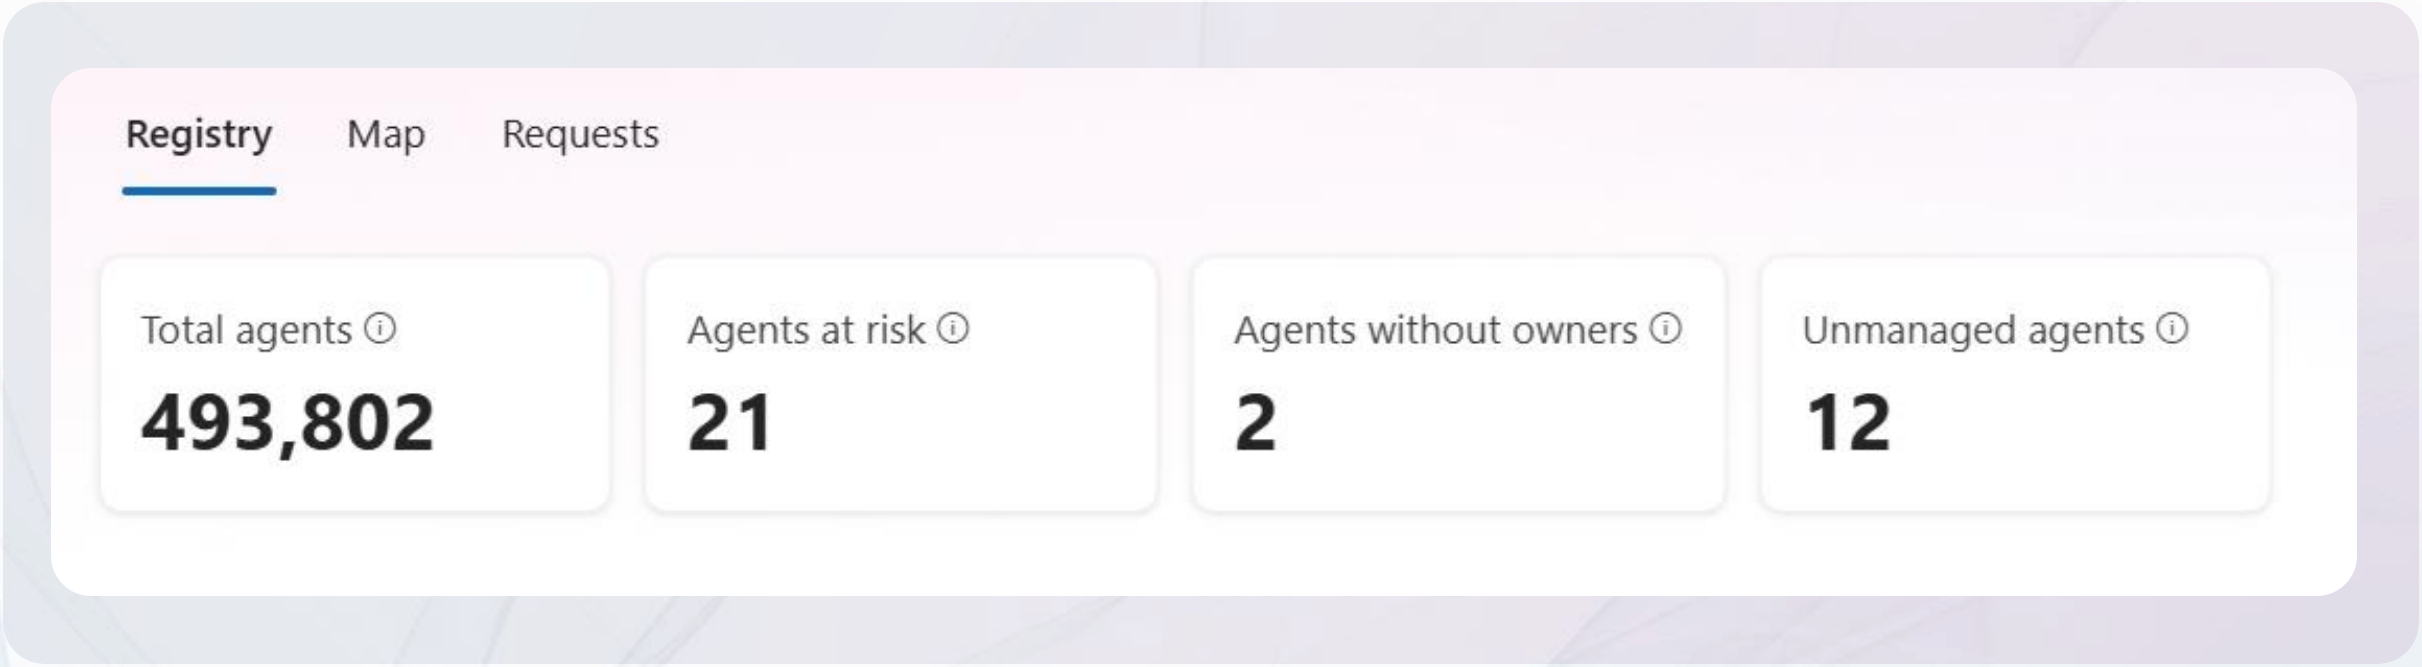

Published by your org

Custom agents approved and published by your organization

Shared by creator

Agents created and shared by individual users or developers at your organization

Agent registry summary

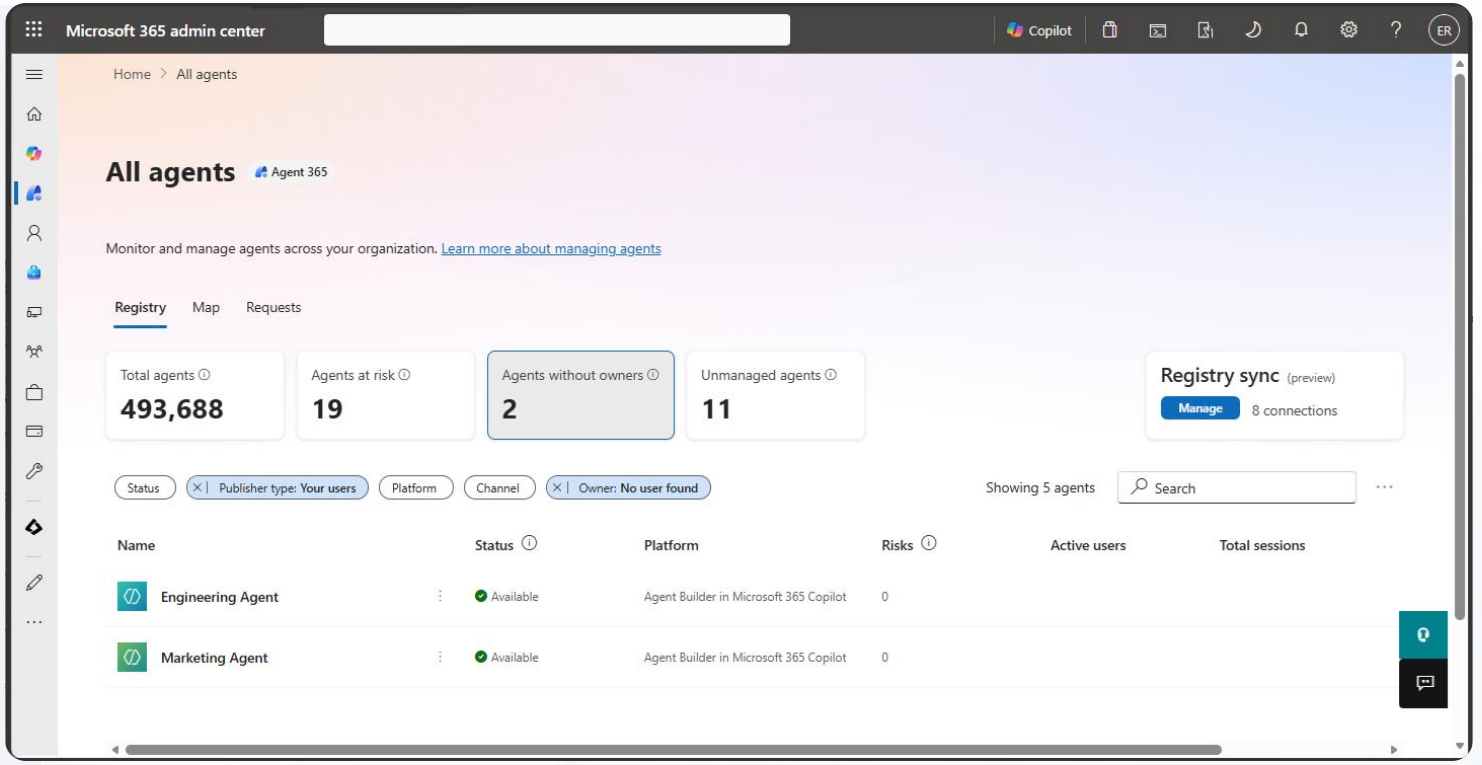

Agent registry actions

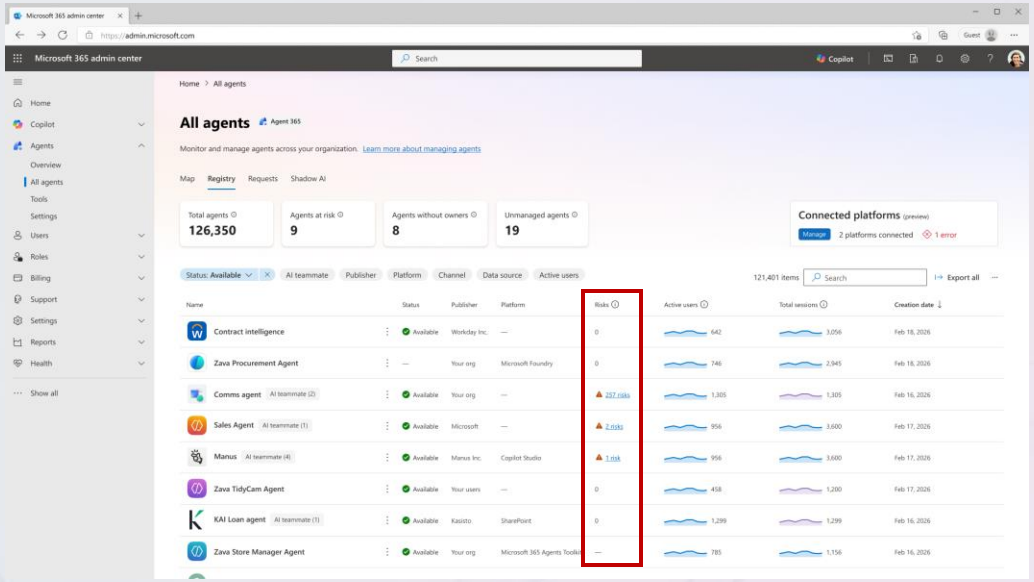

Action	Description
Refresh	Updates the list to provide the most current view of the agent list.
Export	Exports agents to a CSV file.
Add agent	Provides a method to upload an agent manifest file (.zip).
Manage pinned agents	Select which agents are pinned for the user.
Customize view	Customize how the columns that are displayed in the agent list.
Search	Use the search option to quickly find an agent in your agent **Registry**.

Agents without owners

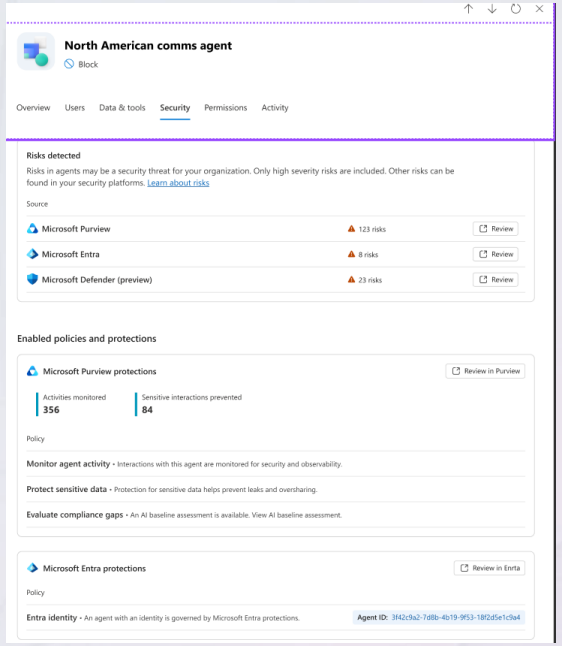

When you select the **Agents without owners** card, the agent list will be filtered to show the agents based on **Publisher type** and **Owner**.

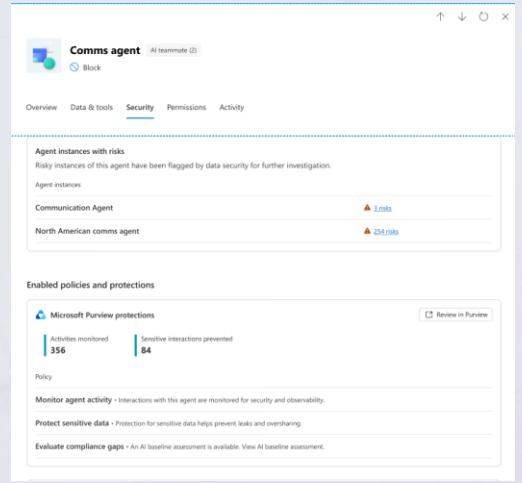

Risks column in the Agent Registry

Select the risk count for an agent from the **Risks** column in the Agent Registry list.

Security tab within the agent's flyout details pane.

If the agent has multiple instances associated with it, the flyout initially displays a breakdown of aggregated risks by instance.

Demo

Upload custom agent

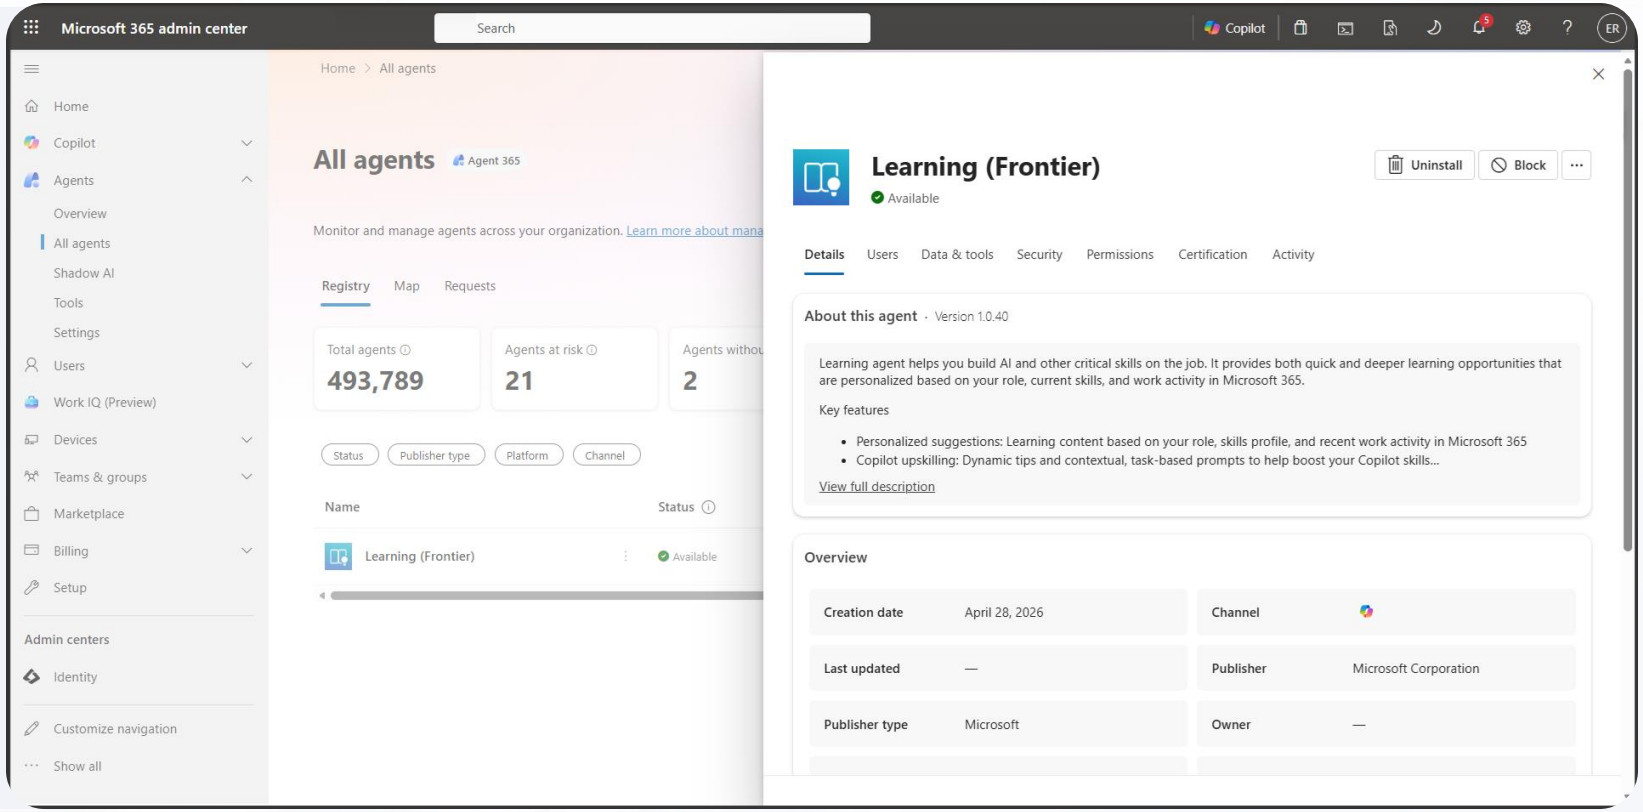

Demo

Manage pinned agents

Agent details

When you select an agent icon, you can see more details about the agent, including:

- Details
- Users
- Data & Tools
- Security
- Permissions
- Certification
- Activity
- Agent instances
- Connected Agents
- Computer use

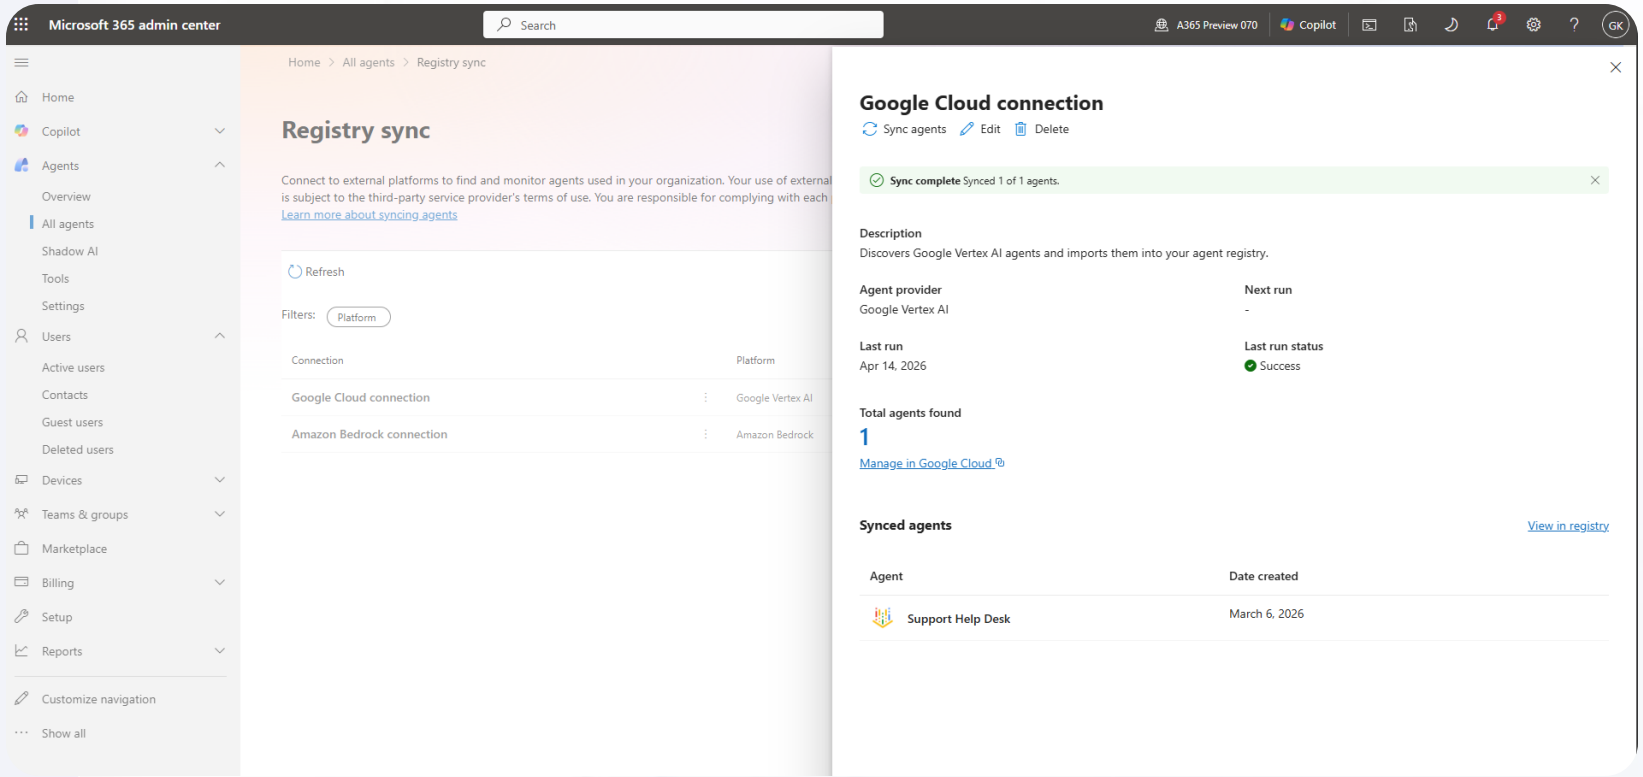

Registry sync

View details after a sync

- Platform provider
- Regions
- Last run date
- Last sync status
- Total synced agents
- Synchronization results

Supported platforms

- Amazon Bedrock
- Google Vertex AI
- Salesforce Agentforce
- Databricks Genie

From users and apps to agent identities: expanding the identity perimeter

Microsoft Entra Agent ID

Secure access for AI agents - just as you do for employees - with enterprise-grade access management, protection, and governance of agent identities.

ID Protection for agents (Preview)

Overview

Microsoft Entra ID Protection helps protect organizations by automatically detecting and responding to identity-based risks on agents using the Microsoft Entra Agent ID platform.

Prerequisites

Roles (for Risky Agent reports)

- Security Administrator
- Security Operator
- Security Reader

Conditional Access policies

- Conditional Access Administrator

Licensing

- Included with
  - Microsoft Entra P2 license + Agent 365 OR
  - Microsoft 365 E7

How It Works

- Agents operate autonomously and on behalf of users
- Baseline of normal activity is established
- Continuous monitoring in Microsoft Entra ID
- Suspicious behavior flagged as risky

Risk Detection Model

All risk detections for risky agents are ***offline***

Activities Contributing to Risk

Confirmed compromised	Early life malicious activity	Entra Directory Reconnaissance	Failed access attempt	Microsoft Entra threat intelligence	Suspicious credential usage	Sign-in spike	Unfamiliar resource access

Purpose

Identify and mitigate identity-based risks for autonomous agents operating at scale.

Agent VS Human VS Application Identity

Identity Type	Purpose	Behaviour Characteristics	Example Use
Agent identity	Represents AI agents	Autonomous execution, tool usage, environment interaction	Workflow-driven AI agent
Human user	Represents a person	Interactive sign-in, MFA, session-based	Employee accessing resources
Application identity	Represents backend services	Non-interactive, static permissions	Web API or daemon

- Agent identities provide unique authentication, scoped resource access, and enterprise governance.
- Designed to support autonomous workflows, tool invocation, and internal orchestration cycles.
- Enables traceability and policy enforcement distinct from human and application identities.

Agent identity and blueprint concepts

Foundational identity types and their roles in Microsoft Entra ID

Agent identity

- Primary account an AI agent uses to authenticate
- Has unique **object ID** and **app ID**
- No password or credential; authenticates via access token
- Token issued to the service or platform where agent runs

Agent identity blueprint

- Template and management structure for agent identities
- Serves as the parent of agent identity instances
- Used to create and manage multiple agent identities
- Blueprint guidance documented in Microsoft Entra ID

Agent identity blueprint principal

- Principal object created when blueprint added to tenant
- Records and manages blueprint presence in that tenant
- Microsoft Entra object representing blueprint addition

Agent user

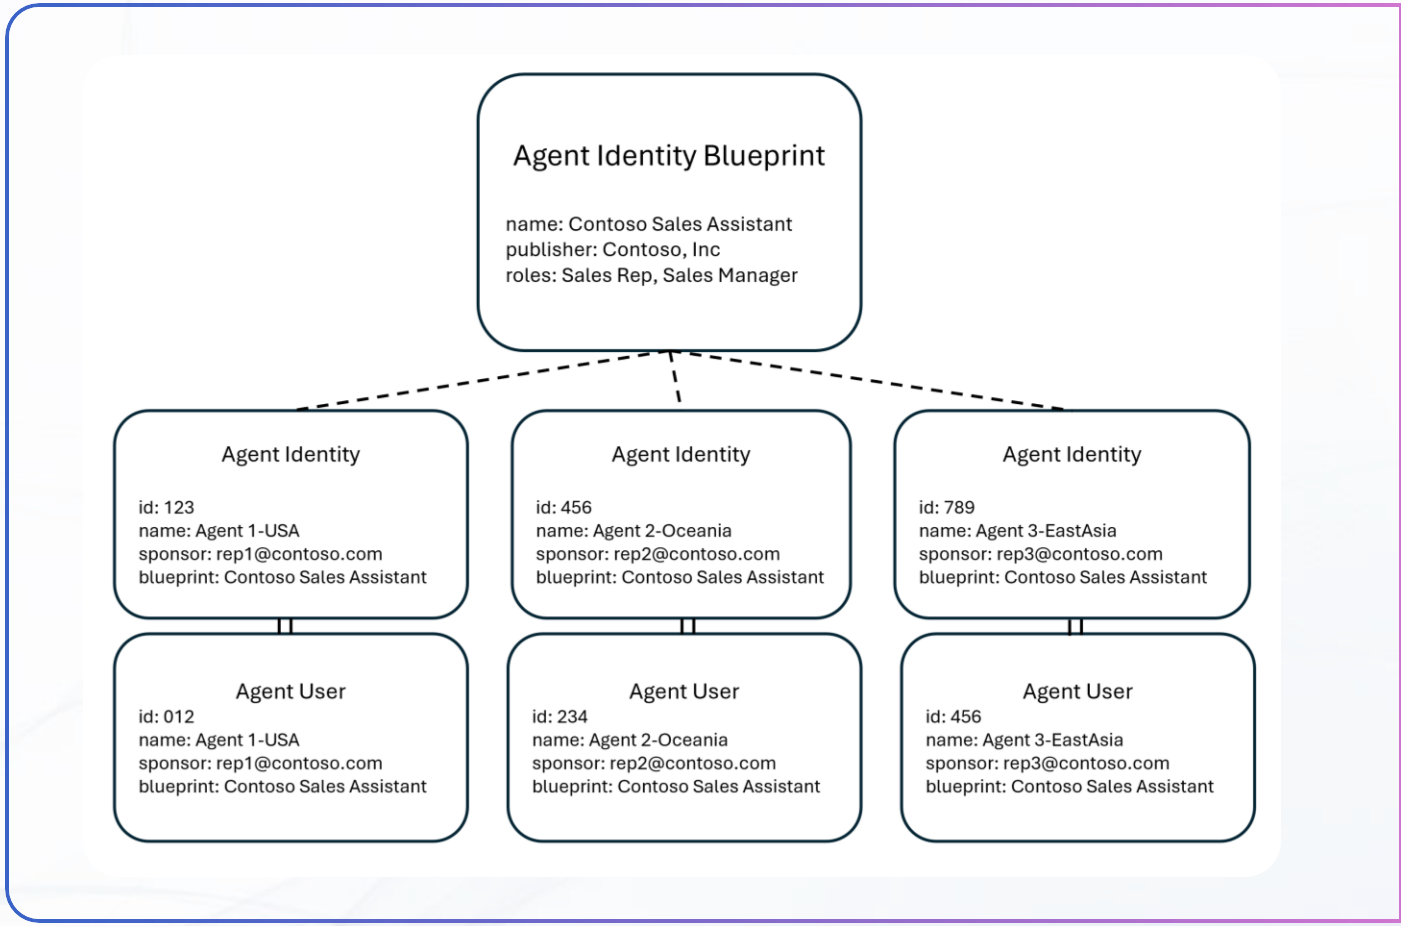

- Specialized identity type bridging the gap between agents and human user capabilities
- Is a tenant user object with properties like manager, UPN, photo
- Compatible with systems that require user objects
- Enables AI agents to connect where user objects are mandatory

Agent users in Microsoft Entra Agent ID

Microsoft Entra user identities that allow agents to access systems requiring a user identity using tokens with `idtyp=user`.

Explicitly created and permanently linked 1:1 to a parent agent identity created from an agent identity blueprint.

- Created using an agent identity blueprint
- Always associated with a specific agent identity
- Have a distinct object ID from the agent identity
- Authenticate only with tokens issued to the agent identity

Agent user relationship and authentication model

Relationship & lifecycle

Permission-gated linkage

Agent identity blueprints must be **explicitly permitted** to create and link agent users.

Parent–child binding

Each agent user is **created from a blueprint** and is **permanently linked** to exactly **one parent agent identity (1:1)**.

Lifecycle ownership

The **agent identity owns the relationship**, while **admins control creation and deletion** of the agent user.

Authentication & security model

Federated identity credentials (FIC)

Authentication uses FIC assigned through the agent identity blueprint and agent identity

Restricted credential model

No passwords or interactive sign-in; agent user can authenticate only via parent relationship

Impersonation model

Agent identity impersonates its agent user to obtain tokens and act as the user

Agent user – capabilities & constraints

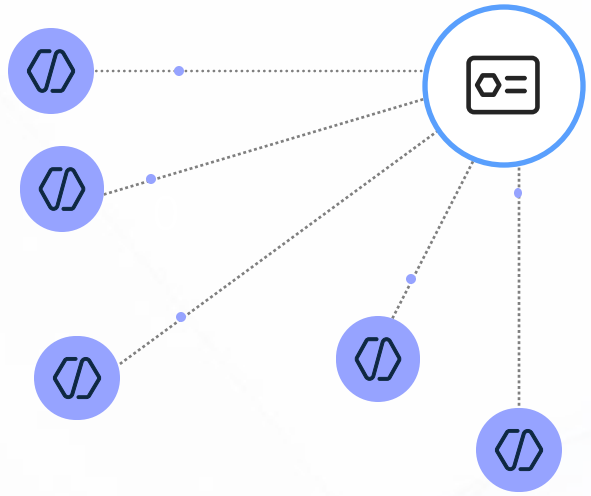

Capabilities

- Join Entra groups (incl. dynamic; not role-assignable)
- Access M365 user-required resources
- Scoped via administrative units
- Assignable licenses

- No passwords or passkeys
- Auth via parent agent identity only
- No privileged admin roles
- Restricted permission model

Constraints

Microsoft Entra Agent ID

Register

and manage AI agents

Govern

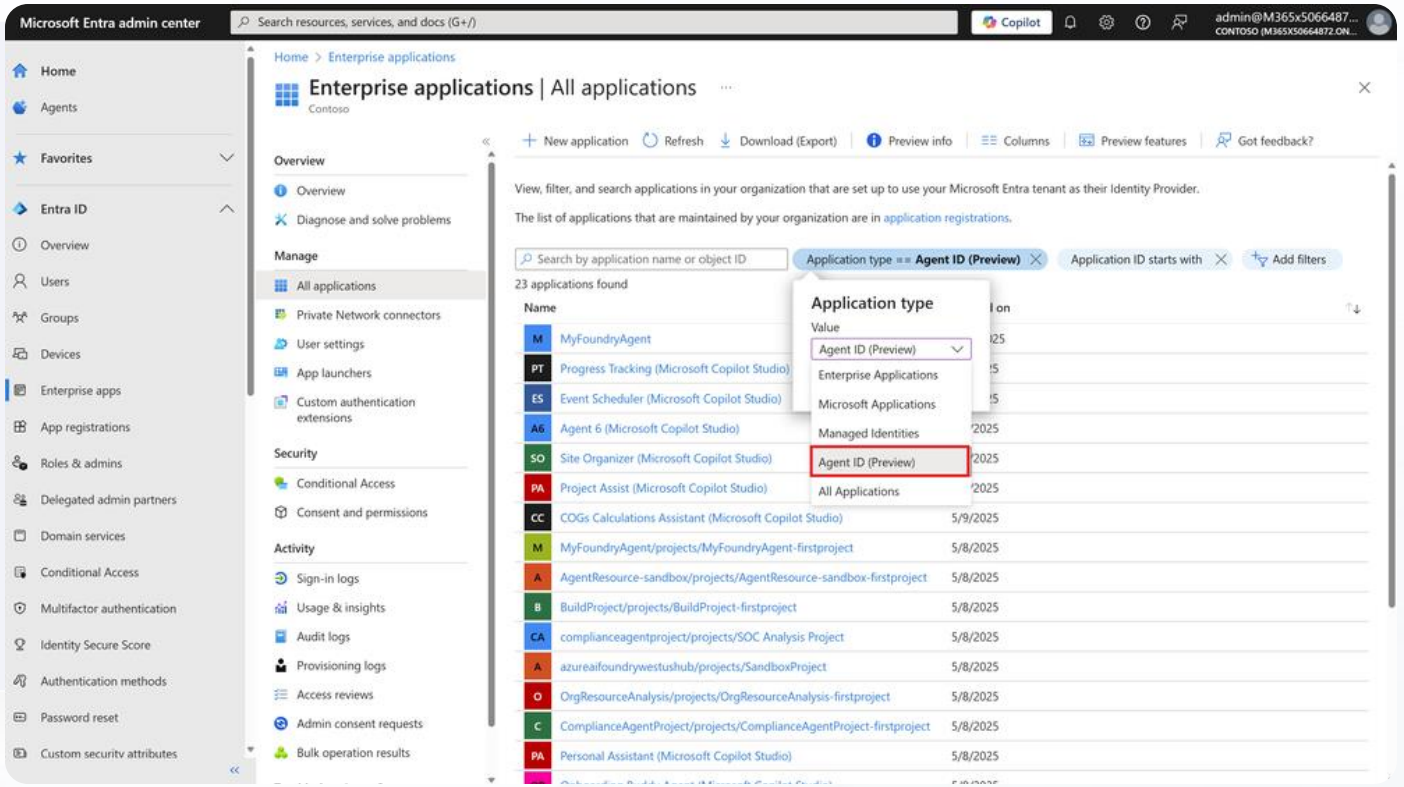

agent identities and lifecycle

Protect

agent access to resources

Microsoft Entra Agent Registry

- Integrates with **Microsoft Entra Agent ID** and Core Directory
- Single **source of truth** for all agent data
- **Supports multiple instances** per agent card
- Enables **Zero Trust** and governance across environments
- Combines **visibility, metadata, and collection-based policies**

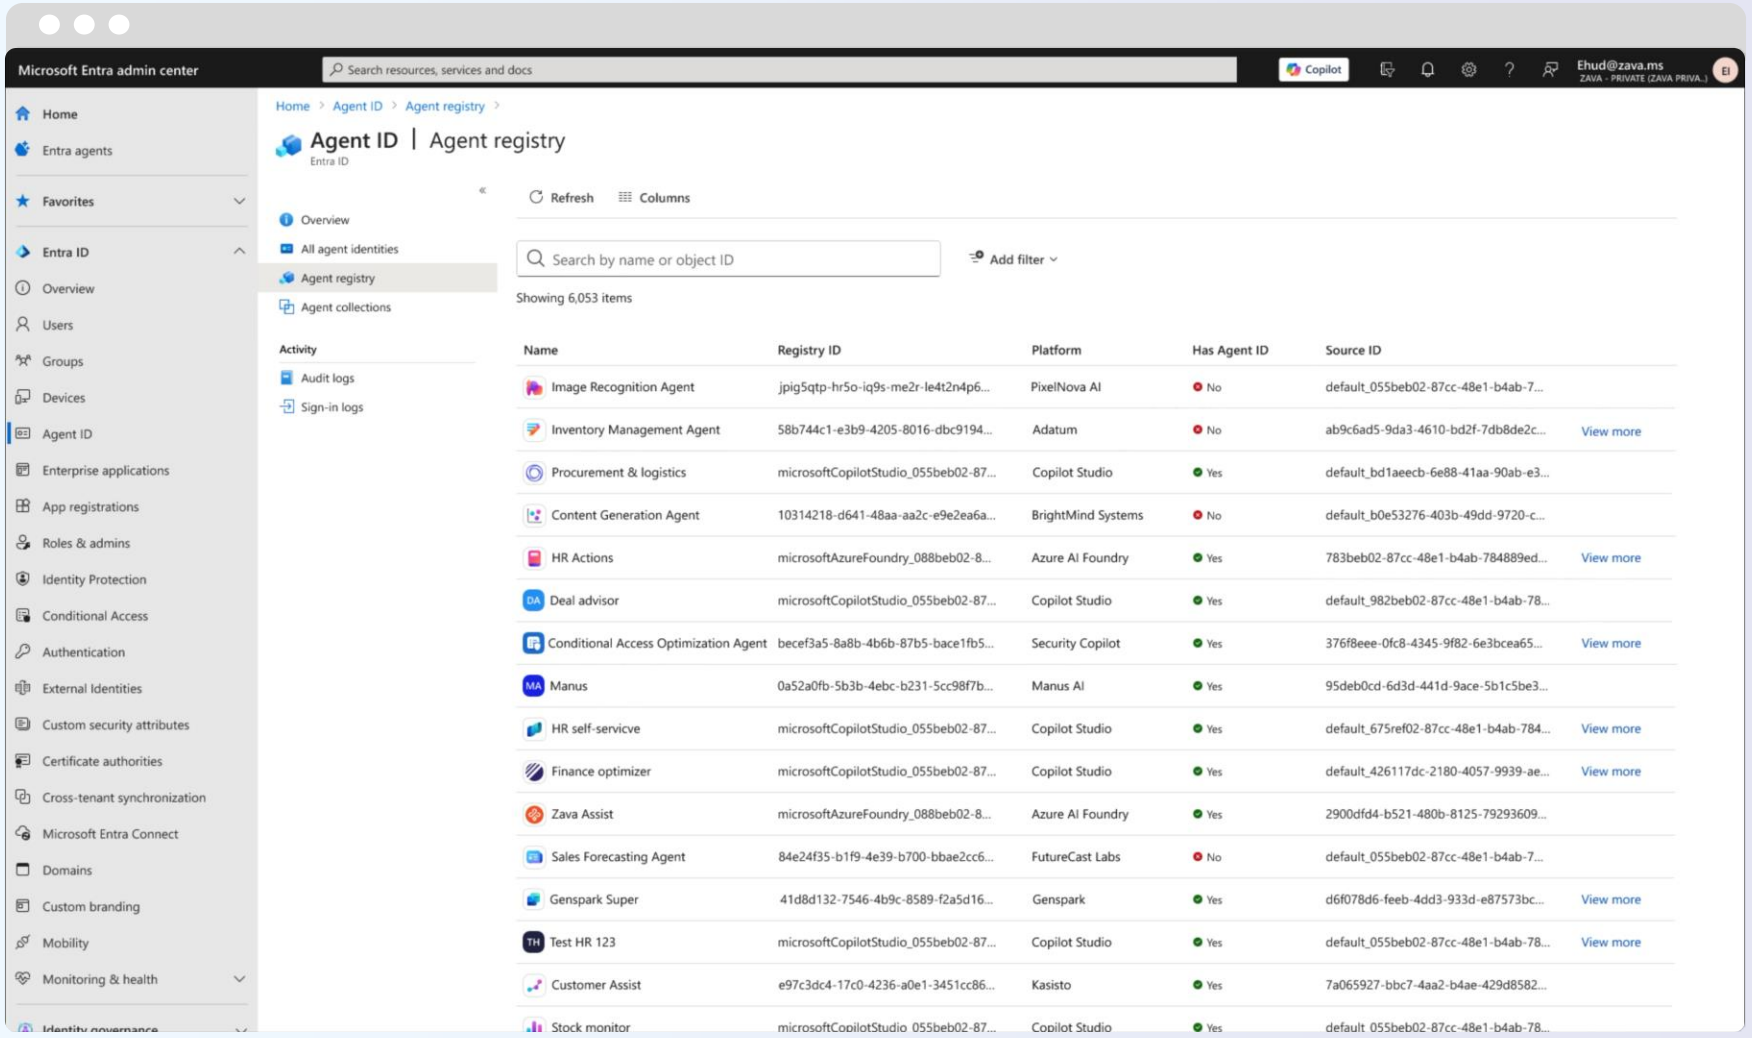

Key Capabilities & Benefits

- **Comprehensive inventory:** All agents, with or without identity
- **Discovery & policy enforcement:** Built-in & custom controls via agent collections
- **Rich metadata:** Open-standard schema for governance and security policies

Difference between Microsoft Agent 365 and Microsoft Entra Agent Registry

Aspect	Microsoft Agent 365	Microsoft Entra Agent Registry
Primary Role	Unified control plane & registry for all agents	Identity foundation via Agent ID
Main Purpose	Observe, govern & manage all agents enterprise-wide	Manage agent identities, access & security policies
Agent Coverage	All agents — Microsoft, partner & custom (with or without Entra ID)	Only agents with a Microsoft Entra Agent ID
Admin Portal	Microsoft 365 Admin Center	Microsoft Entra Admin Center
Required Role	AI Administrator (or AI Reader for read-only)	Agent ID Administrator
License Needed	Microsoft 365 E7	Microsoft Entra Agent ID / Microsoft 365 E7
Key Capabilities	Discover all agents, monitor operational activity, unified inventory	Conditional Access, identity governance, security signals, blueprints
Relationship	Uses Entra as the identity foundation underneath	Provides identity layer that Agent 365 builds upon

Demo: Register and manage AI agents

Core components of the Agent Registry

Component	Purpose
Metadata store	Centralized agent metadata repository
Collections	Secure agent categorization and discovery control enforcement
Discovery service	Agent and capability discovery APIs
Integration layer	Coordinates with Microsoft and non-Microsoft ecosystems

Data handling, data residency, and compliance in Agent 365 observability

What is Agent 365 Observability?

Overview

Unified observability platform

Agent 365 provides a single control plane for visibility into AI agent behavior across your tenant — powering the Microsoft 365 Admin Center, Microsoft Purview, and Microsoft Defender XDR.

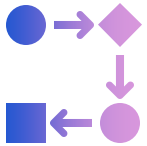

Developer integration is REQUIRED

Third-party and custom agents must explicitly integrate with the observability schema. Microsoft-built platforms (Foundry, Copilot Studio, Agent Builder) include it automatically.

Microsoft-built agents

Foundry, Copilot Studio, Agent Builder — observability built-in and automatic.

Custom / third-party agents

Must explicitly integrate. No integration = no observability data collected.

How Data Flows Into Agent 365 Observability

Data ingestion trigger and flow

1

License purchase + Terms accepted

Customer starts an Agent 365 trial or purchases a valid license AND accepts the Agent 365 Terms of Use.

2

Agents begin sending data

Supported agents start transmitting observability data per the schema. No data is stored before ToU acceptance.

3

Data powers the admin surfaces

Observability data flows into Microsoft 365 Admin Center, Microsoft Purview, and Microsoft Defender XDR.

ℹ No agent activity data is stored before the customer begins a trial or purchases a license.

What Data is Collected

Agent 365 observability schema

Core telemetry (always collected)

- Agent runs & execution traces
- Tool usage events
- Model / inference calls
- Timing information
- Status & error codes
- Tenant & agent identifiers
- User session identifiers

Optional inputs & outputs

- Agent inputs (prompts, parameters)
- Agent outputs (responses, results)
- Included only when the source platform or agent developer explicitly includes them in observability data

ℹ Whether inputs and outputs are captured is determined by the agent developer or the platform. Review data handling requirements before enabling.

Data Residency

Where observability data is stored

Stored in tenant's default geography

Agent 365 stores customer content in the default geography assigned to the tenant at the time the Microsoft Entra tenant was created.

EU Data Boundary (EUDB) honored

Tenants in the EU Data Boundary region have their observability data stored within that boundary, consistent with Microsoft EUDB commitments.

APAC caveat: service-generated data

For tenants in Asia Pacific regions, some service-generated data may be stored in datacenters outside the tenant's default geography.

Advanced Data Residency (ADR) not supported

Agent 365 does not currently support Advanced Data Residency (ADR). Customers with ADR requirements should be aware of this limitation.

30

DAYS

Data Retention

Agent 365 stores observability data for 30 days. After this period, the data is automatically deleted.

What this means for your organization:

- Plan investigations and reviews within the 30-day window
- Data is non-recoverable after automatic deletion
- No current option to extend retention period

Data Protection & Security

How Agent 365 safeguards observability data

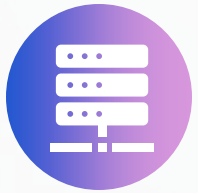

Logical tenant isolation

All data accessed or processed is logically isolated per tenant — one tenant cannot see another's data.

Entra-based auth & authorization

Microsoft Entra authentication and authorization controls govern all access to Agent 365 observability data.

Encryption at rest and in transit

Standard Microsoft encryption technologies protect customer data both when stored and when transmitted.

No third-party data access

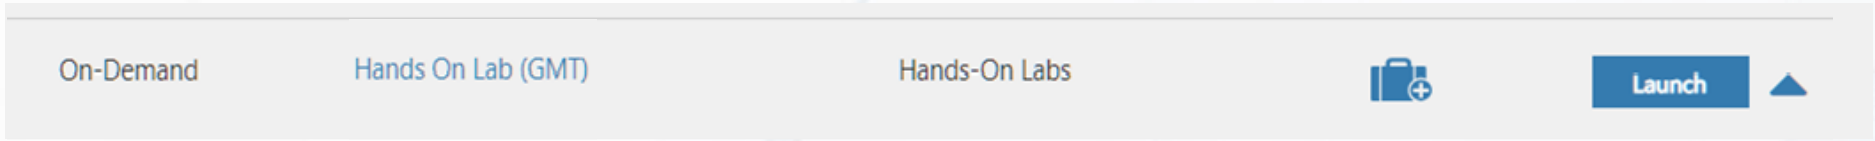

Microsoft does not share customer observability data with any third party. Microsoft personnel access is strictly controlled.

Lab Activity 1

Hands-on Lab

Please note that the labs are only open to a limited number of Microsoft partner participants and are offered on a **first-come-first-served basis**.

- **Step 1** : Click on **Launch** in the event curriculum to launch your labs

- **Step 2 :** Join the **Live session for Lab Support and Q&A Session**

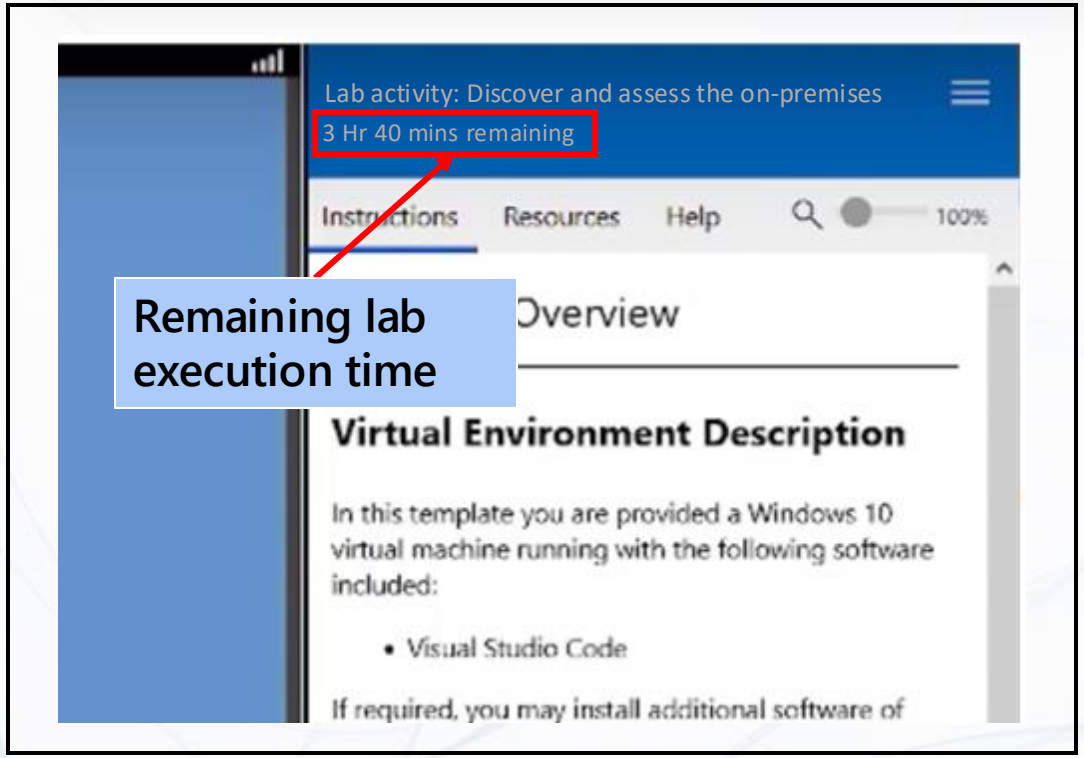

For all Lab logistical support issues, please go to: https://www.skillable.com/customer-support/ and select the "Open a Support Ticket"

Important lab information

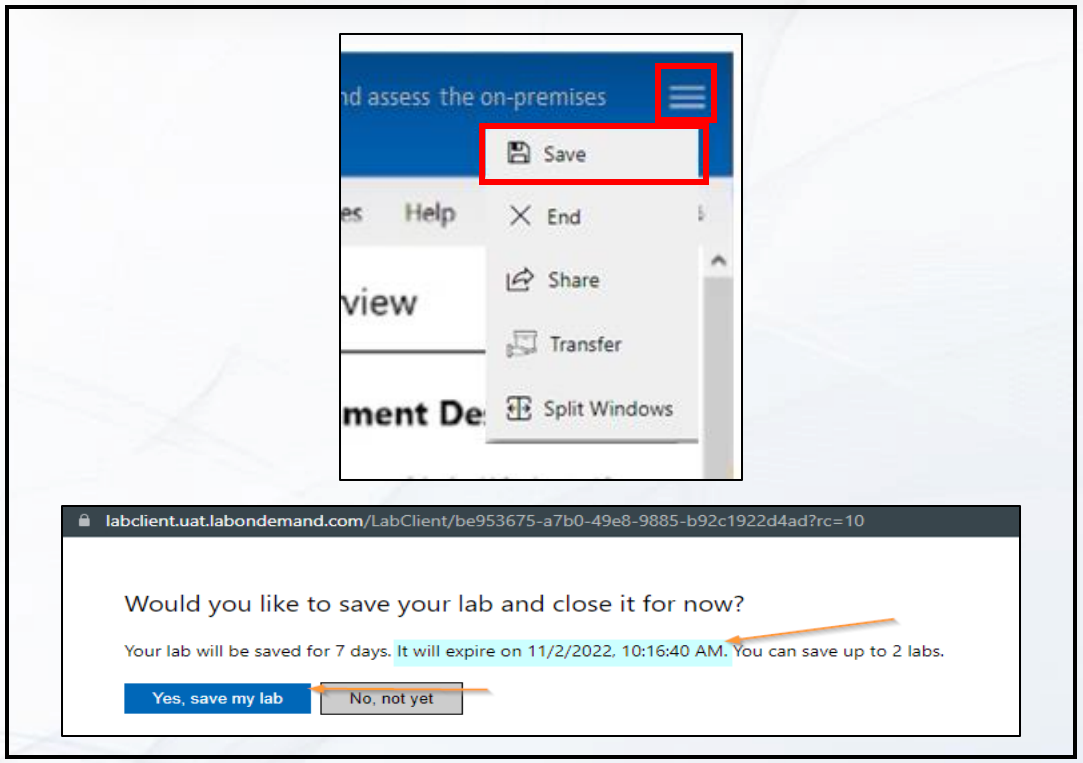

Track remaining lab execution time

- Once launched, a lab is available for active execution for the time displayed in the screenshot.

Save your Lab

- Ensure that you SAVE the lab after each break.
- Do not fail to relaunch within the specified time to avoid losing saved labs.

Once the allocated lab time expires, it can not be extended.

Hands-on Labs

Lab 00

Environment Setup

Lab 01

Agent discovery and registry management using Agent 365

Lab 02

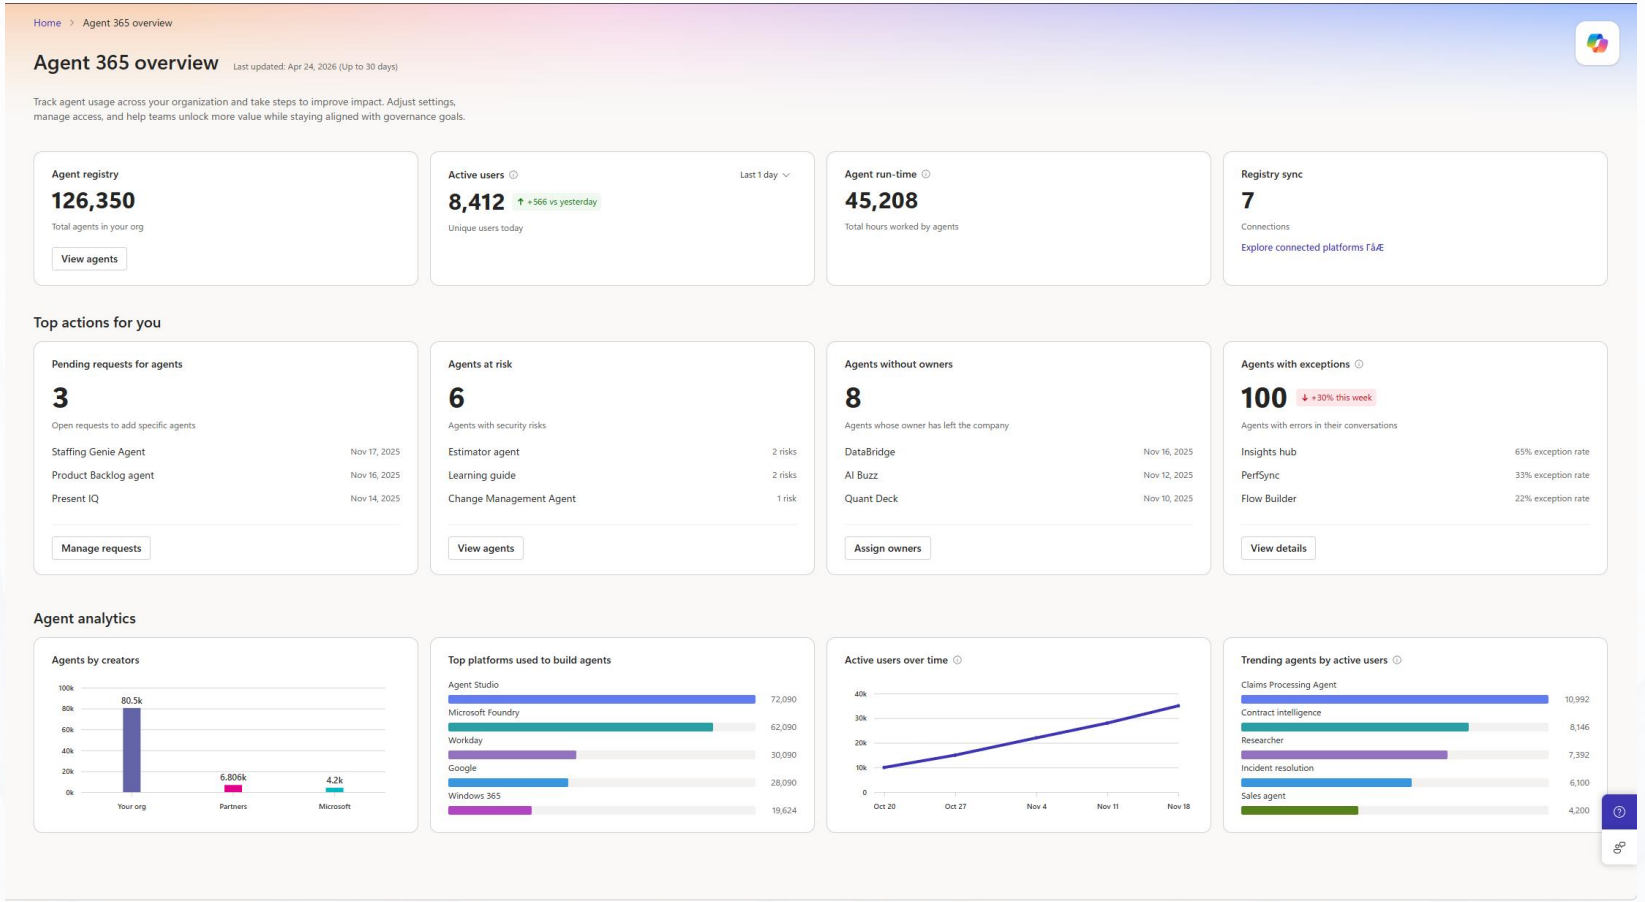

Agent Identity configuration and monitoring in MS Entra

Module 3

Govern — guardrails for agents and users

Navigating the Agent 365 Overview page

Agent overview summary

- A snapshot of agent activity and actionable insights for the last 30 days
- Track agent usage trends
- Identify risks and governance gaps
- Critical actions for administrators to review, such as:
  - Approve pending requests
  - Manage agents without owners
- Total agents in your organization
- Enable visibility and control across all agents in your tenant

Hero metrics for agent adoption and impact

Agent Registry

Total number of agents available across Microsoft-built, partner-built, and custom organizational agents.

Active Users

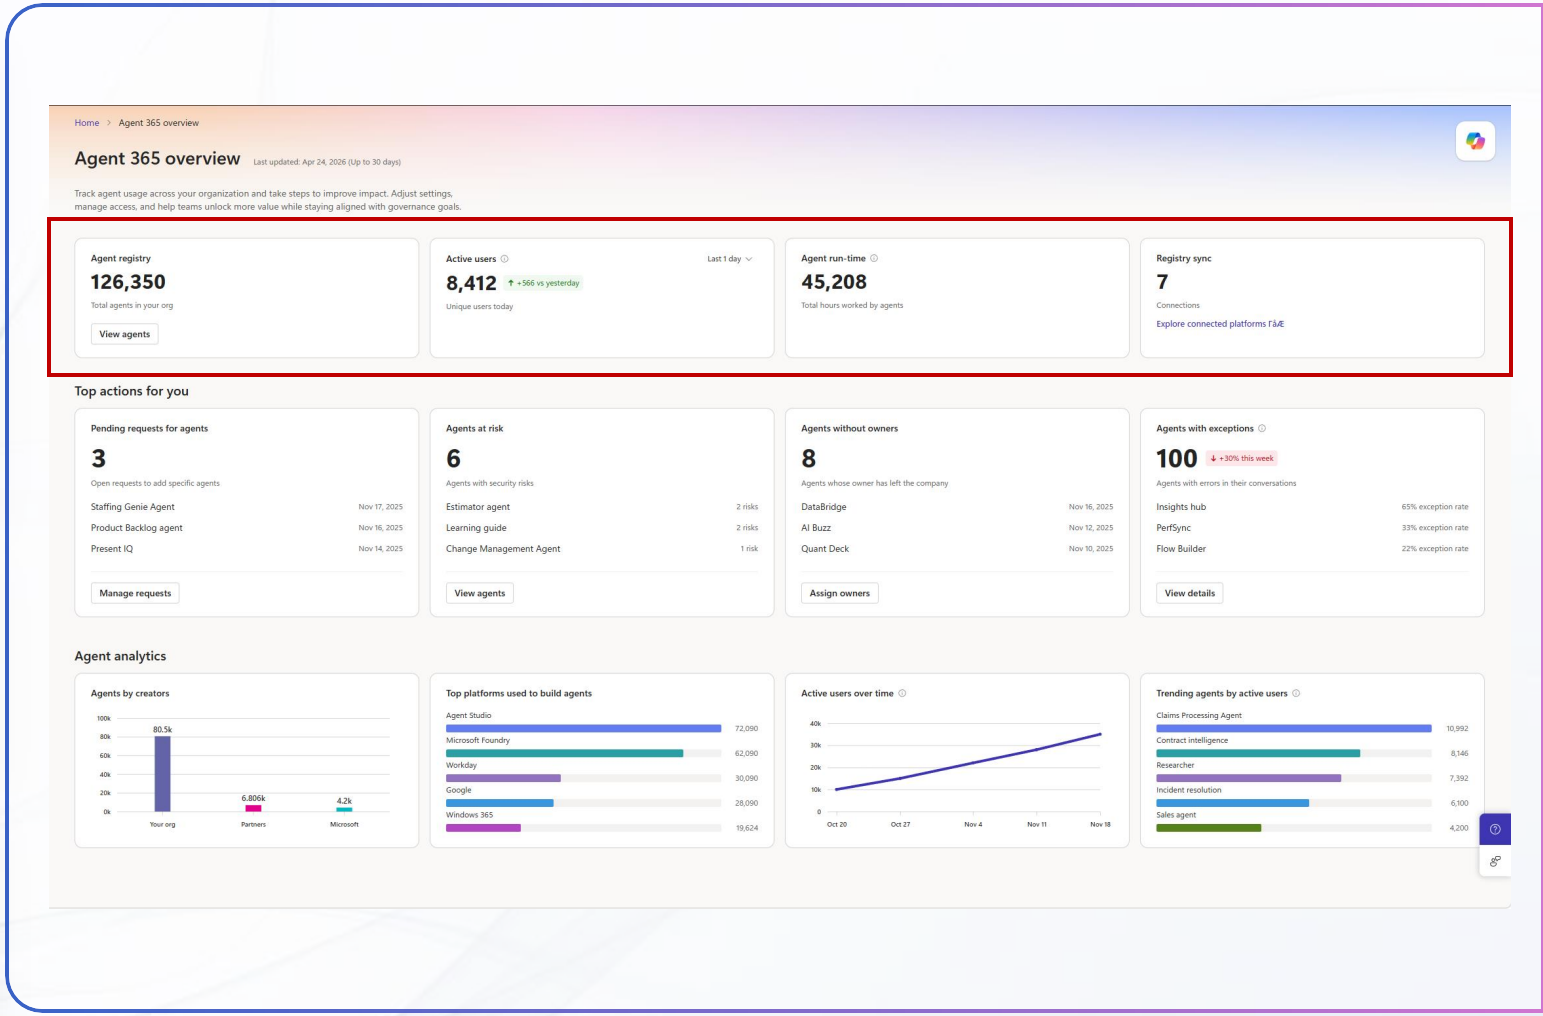

Unique users who interacted with at least one agent within the last 30 days.

Agent Run-time

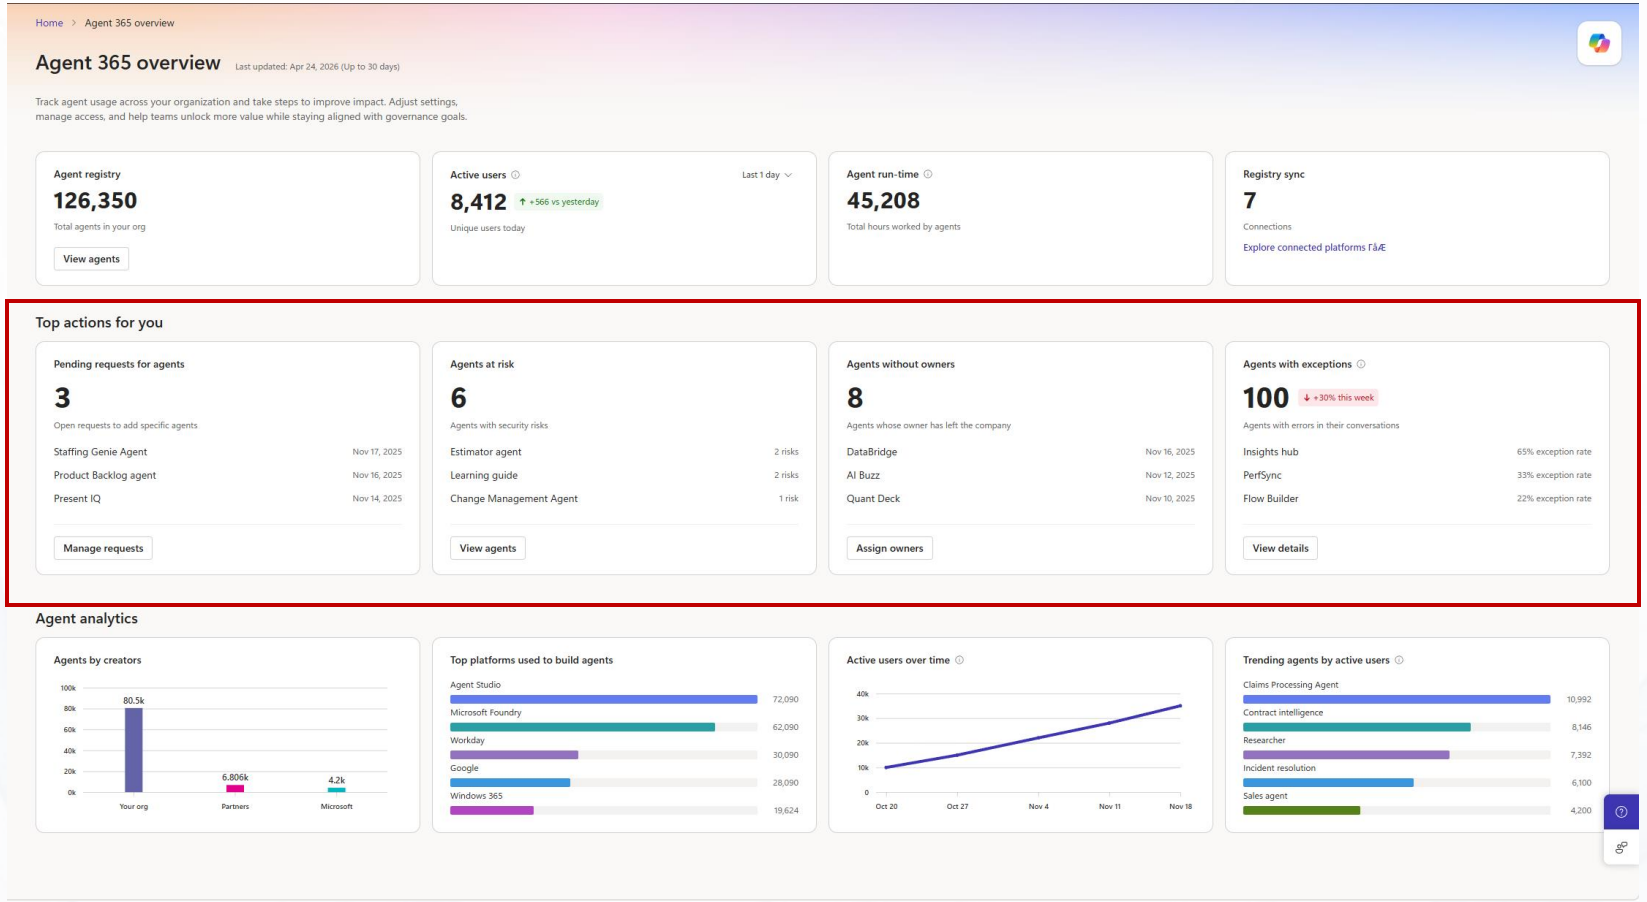

Total hours agents spent processing and completing user requests during the last 30 days.

Registry Sync

Number of connected external platforms scanned to discover and monitor agents.

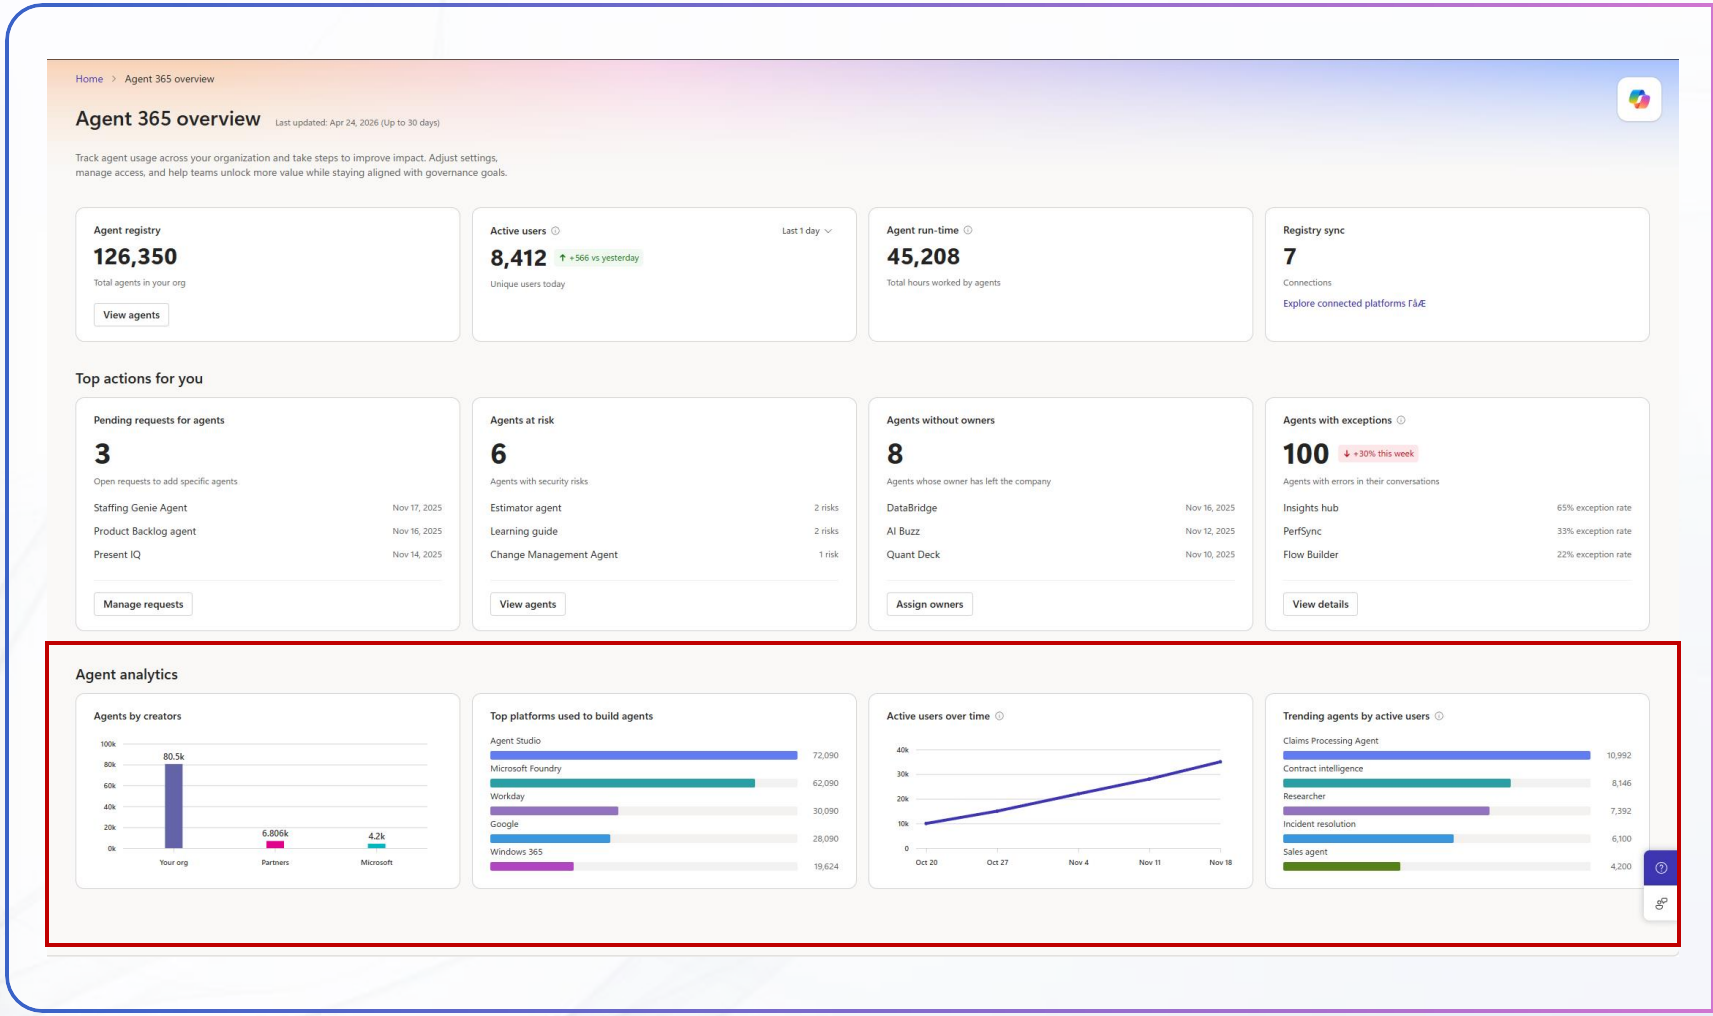

Top actions for you

- Pending Requests for agents
- Agents without owners
- Agents at risk
- Agents with exceptions

Top actions for you

- Agents by creators
- Top platforms used to build agents
- Active users over time
- Trending agents by active users

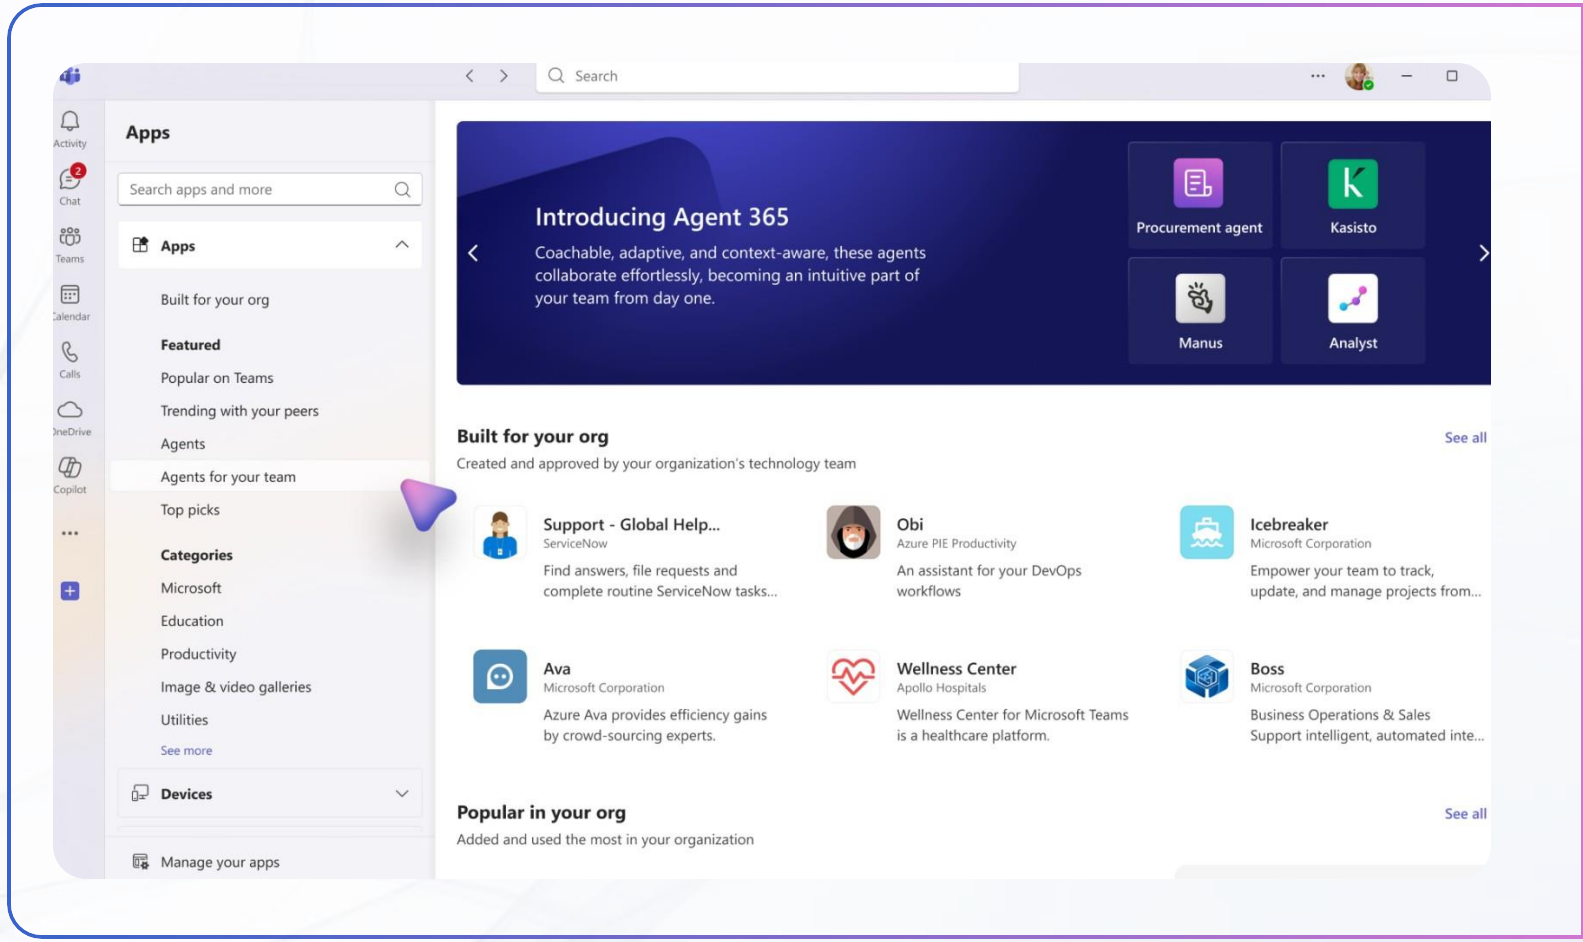

Agent Lifecycle Management in Agent 365

Discover Agent Templates

Discover Agent Templates

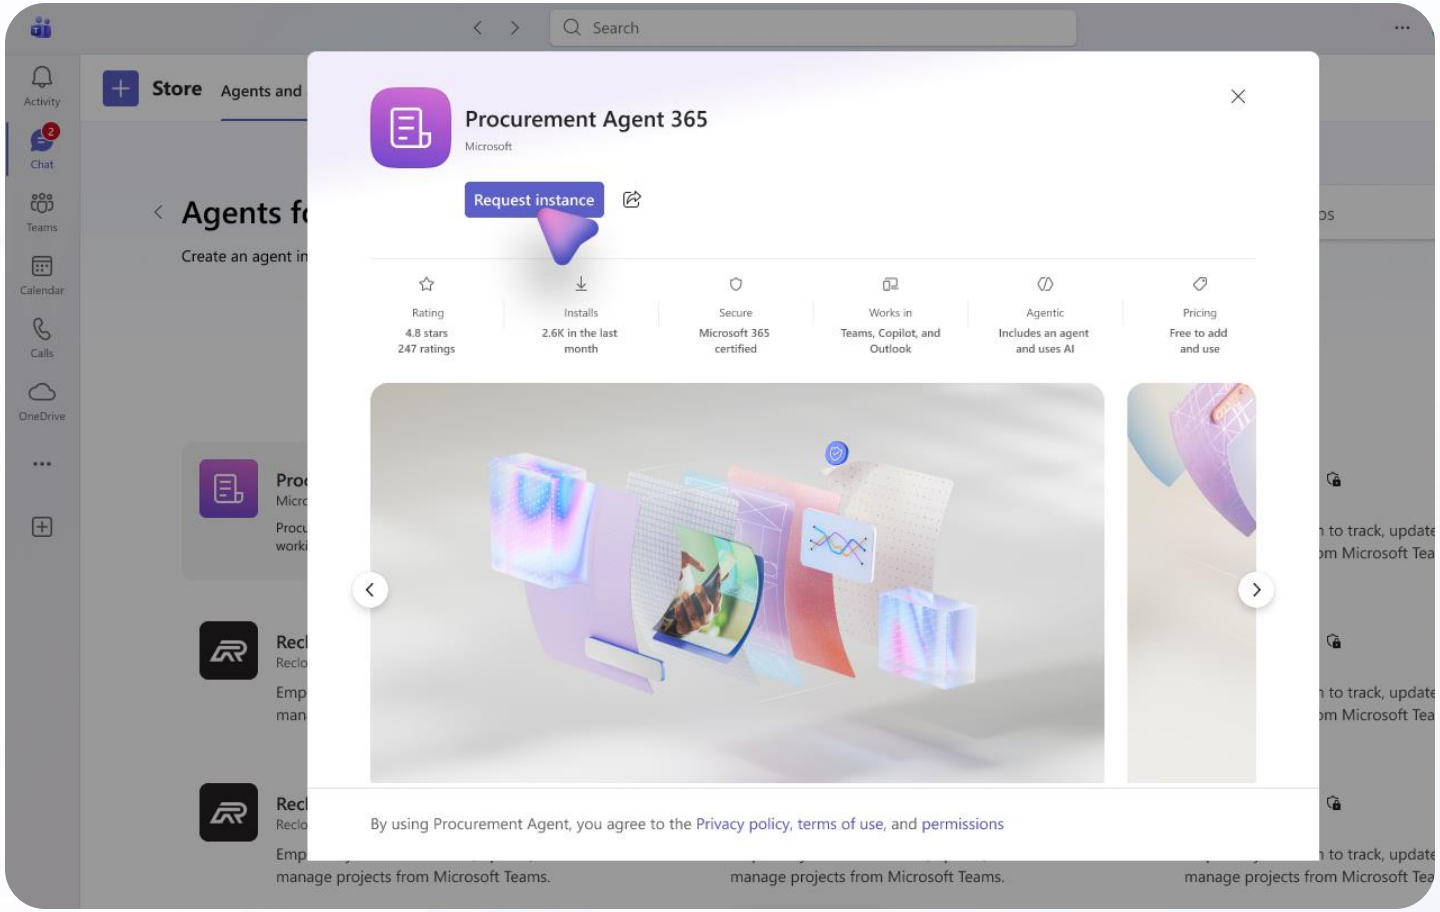

1. Agent templates are preconfigured, IT-approved definitions of Agent 365 agents in Microsoft 365. Each template defines:
   - Description and skills
   - Developer information
   - Required licenses and policies
2. Admin approval is required before any template can be activated.

Create an Agent

Create an agent

1. Select **Request instance** on the agent template details page.
2. Admin approves the request in the Microsoft 365 admin center.
   - Activates the template
   - Assigns licenses and policies
3. After activation, select **Create instance** on the template page.
4. **Configure** the agent.
   - Agent icon
   - Name
   - Alias
   - Agent description
   - Domian
5. Select **Save** to finish.

Onboard an agent

Post-creation state

The AI agent appears in your organization chart under the creator's supervision

Where you interact

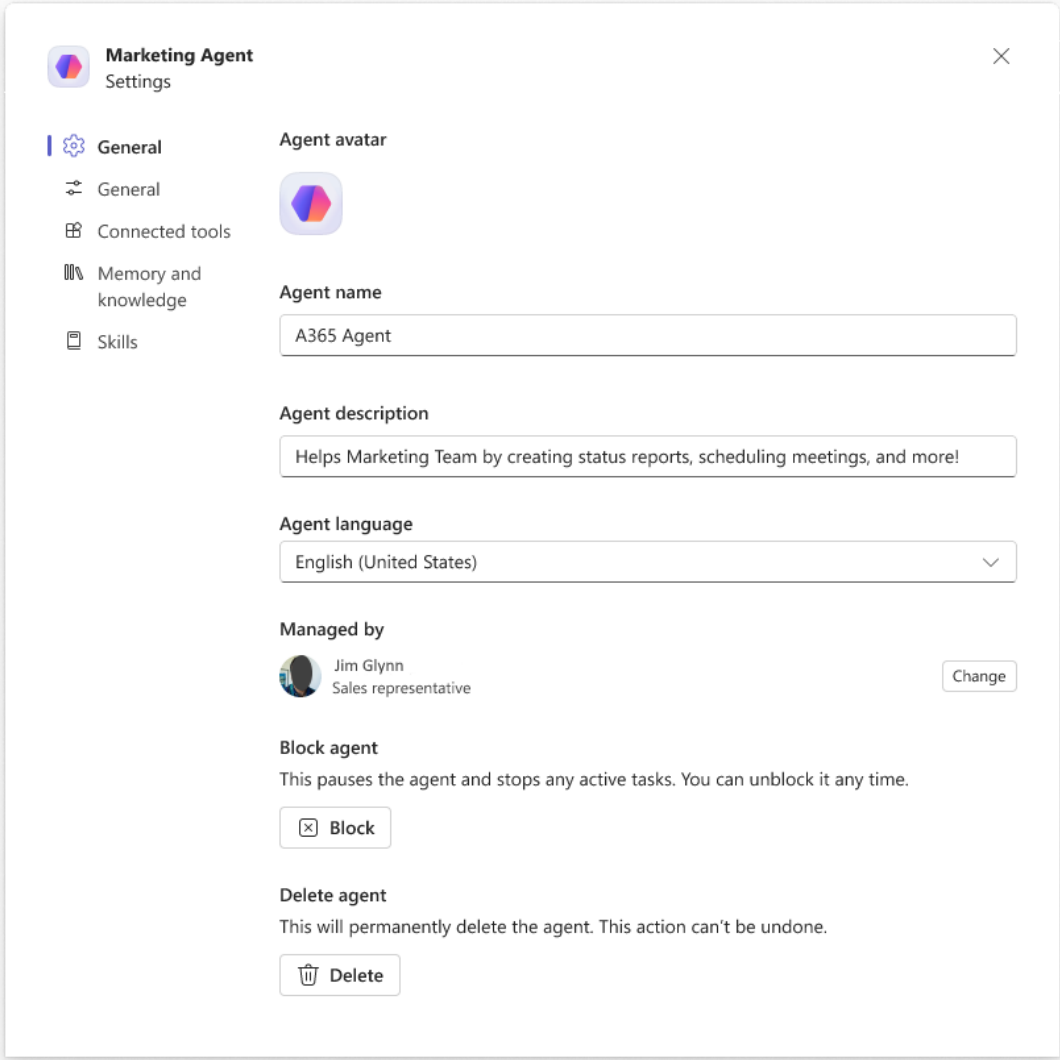

- Copilot chat
- Teams chat
- Teams Channels
- Teams Meetings

Ongoing management

- Configure more settings in the agent card in Teams or Copilot chat
- Pause or delete agents in Teams or Copilot chat
- Tenant admins can also manage agents in the Microsoft 365 admin center

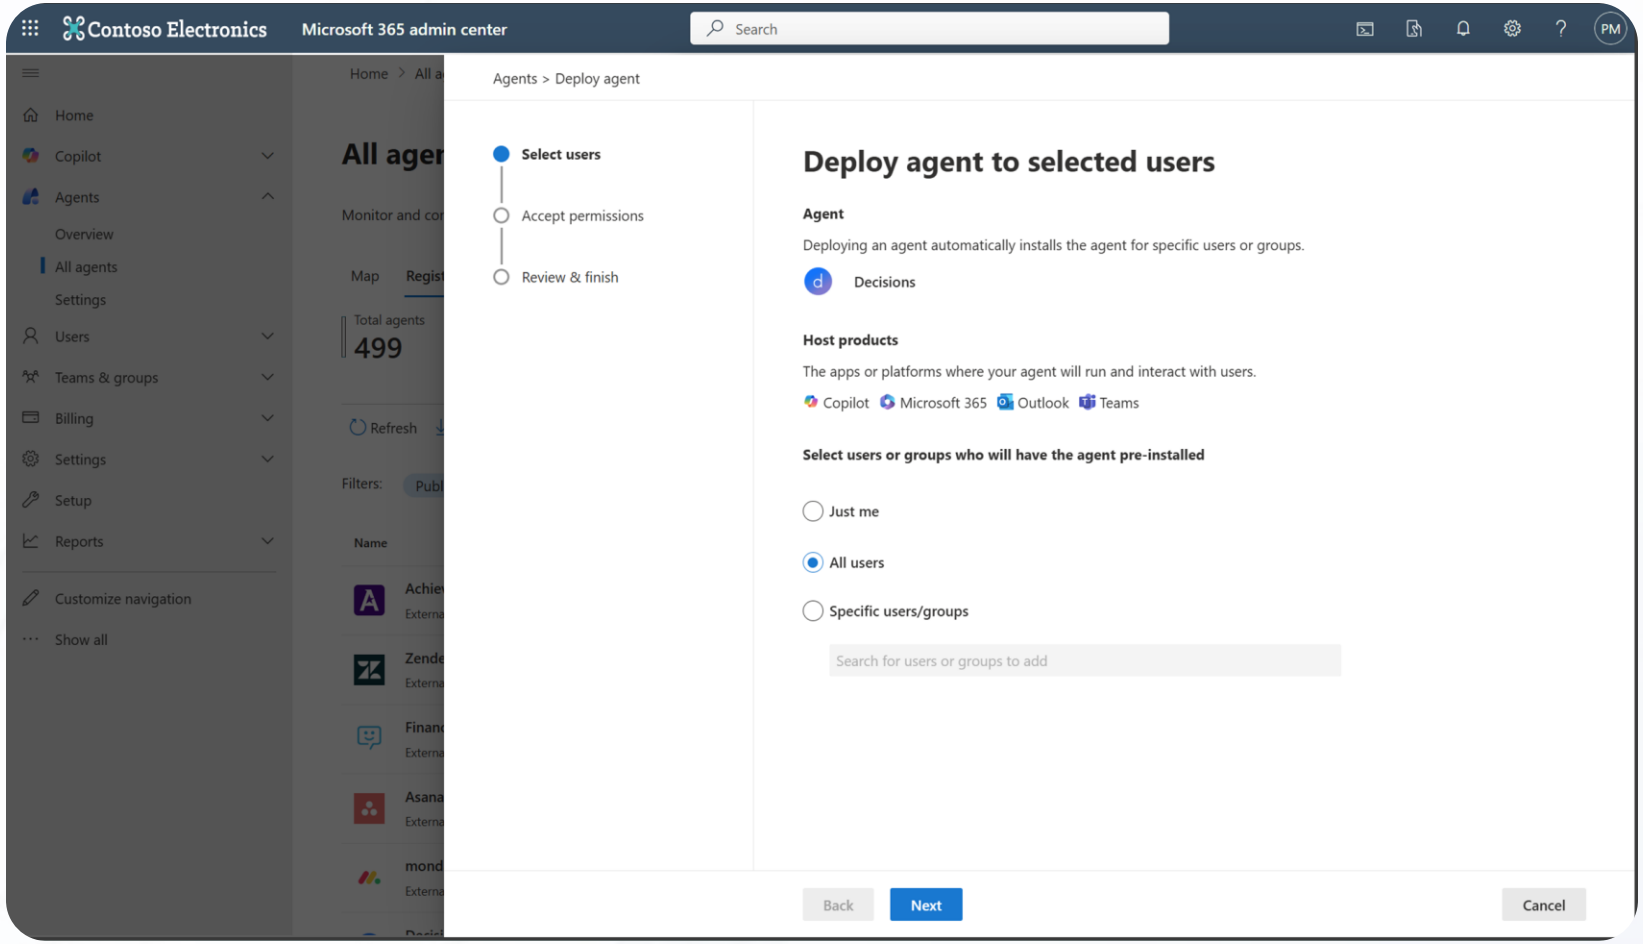

Deletion

Resources associated with an agent remain for **30 days after deletion**

Agent actions for Lifecycle Management in Agent 365

- Install and uninstall
- Block and unblock
- Delete
- Assign a new owner
- Publish to store
- Reject submission

Manage agent instances in Microsoft 365 admin center

Centralized Management

View the number of instances created for a specific agent from the Agent Registry (Agents > All agents > Registry), a centralized view in the Microsoft 365 admin center.

Agent Details Flyout

Selecting an agent opens a flyout panel displaying agent details. Select the **Instances** tab to view the instances created under that agent.

Instance Details

The **Instances** tab provides a detailed list of all instances and empowers administrators to:

- Manage individual instances
- Review security & compliance status
- Apply and customize licenses at the instance level

Identifying and managing agents using Microsoft Entra Agent ID

Microsoft Entra Agent ID

Register

and manage AI agents

Govern

agent identities and lifecycle

Protect

agent access to resources

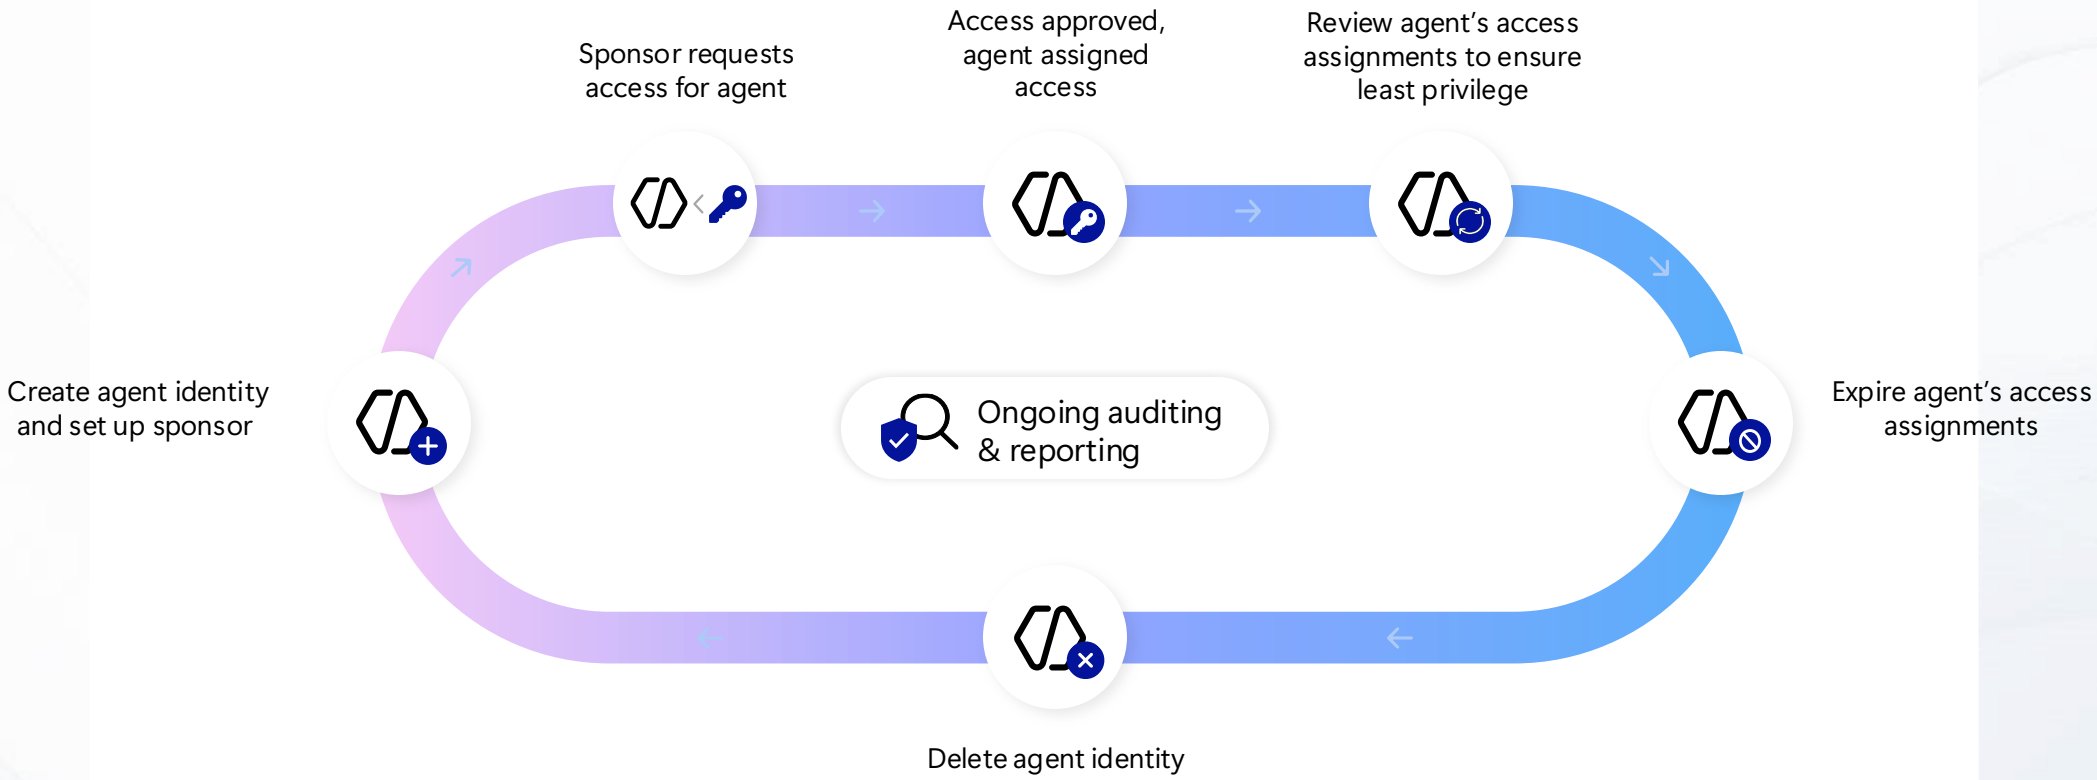

Govern agent identities and lifecycle

Keep your agent fleet under control with lifecycle management and pre-defined guardrails.

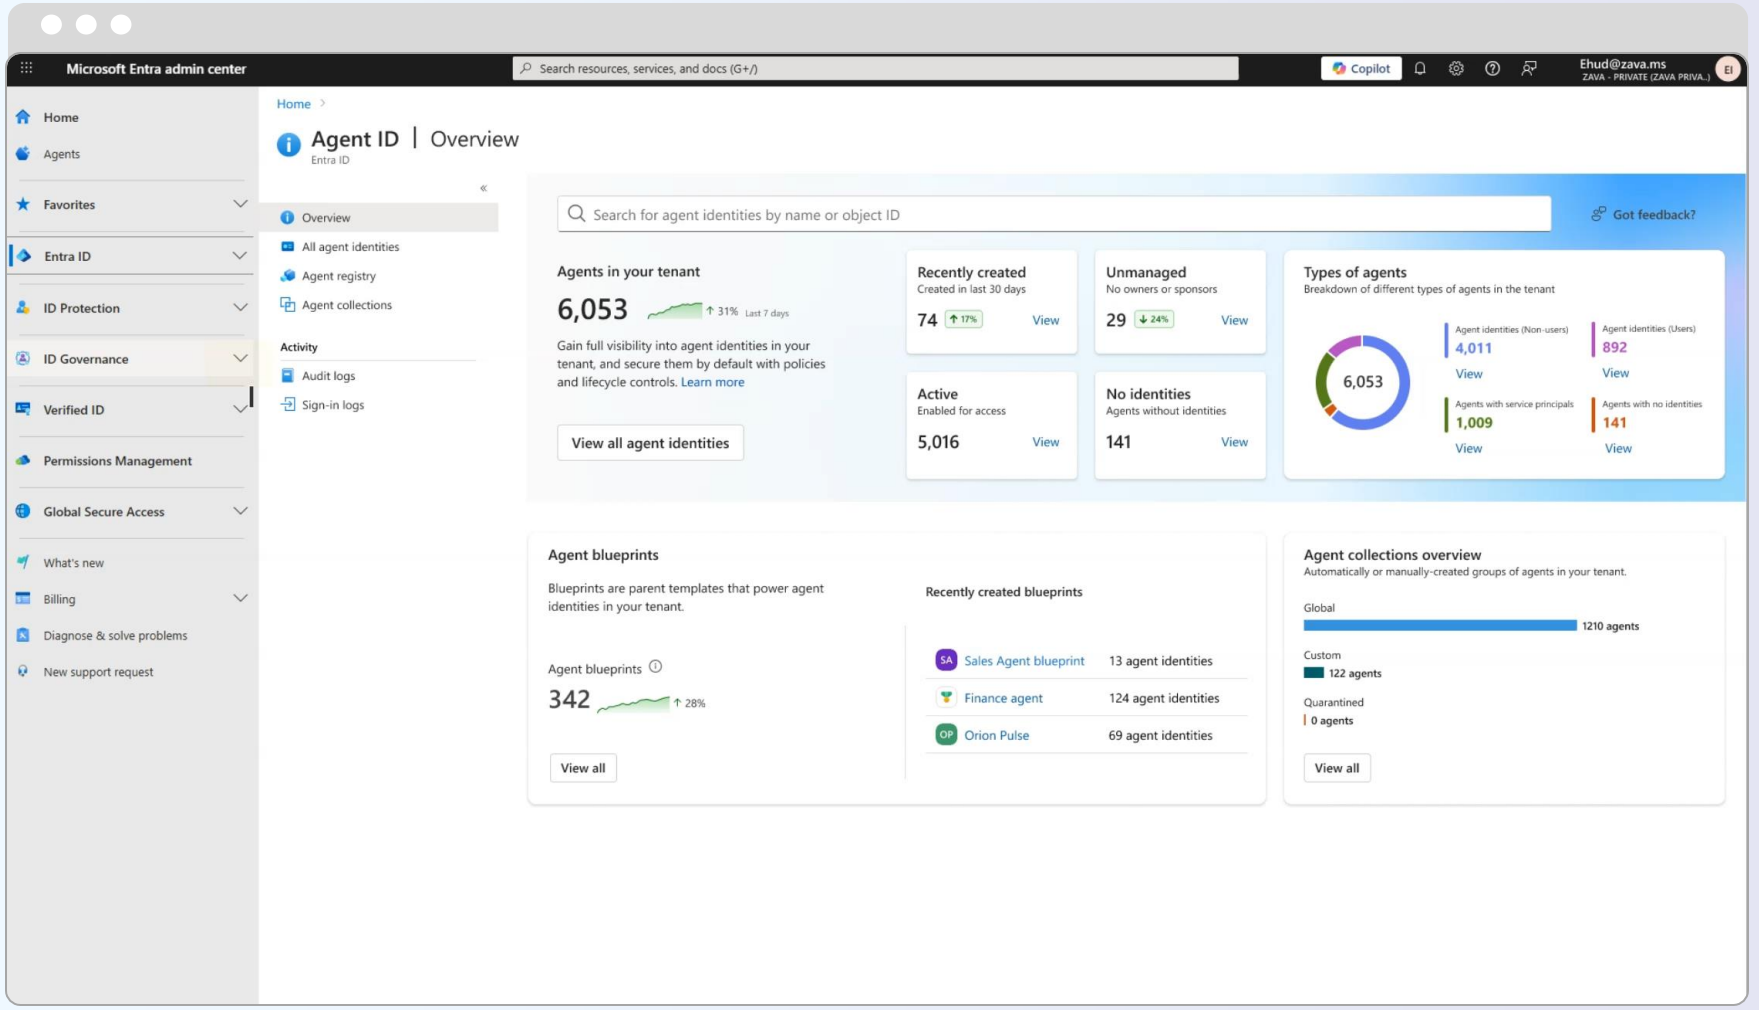

- Assign sponsors to every agent ID to keep them under human oversight.
- Manage agent lifecycle from creation to deactivation, at scale.
- Enforce least privilege with access packages.

Automate agent identity lifecycle workflows

Demo: Govern agent identities and lifecycle

Visualize agent relationships and ecosystem fit

Microsoft Agent 365 for stakeholders

IT Administrator
Monitors agents, enforces policies, and ensures secure operations.

Security Worker
Protects agents with identity, compliance, and threat controls.

Agent Developer
Builds and extends agents using unified SDKs and tools.

Business Decision Maker
Drives secure agent adoption for business outcomes.

Information Worker
Collaborates with agents to boost productivity.

Agent Map

An **interactive visualization feature** in the Microsoft 365 admin center for **viewing**, **organizing**, and **managing agents** in your tenant.

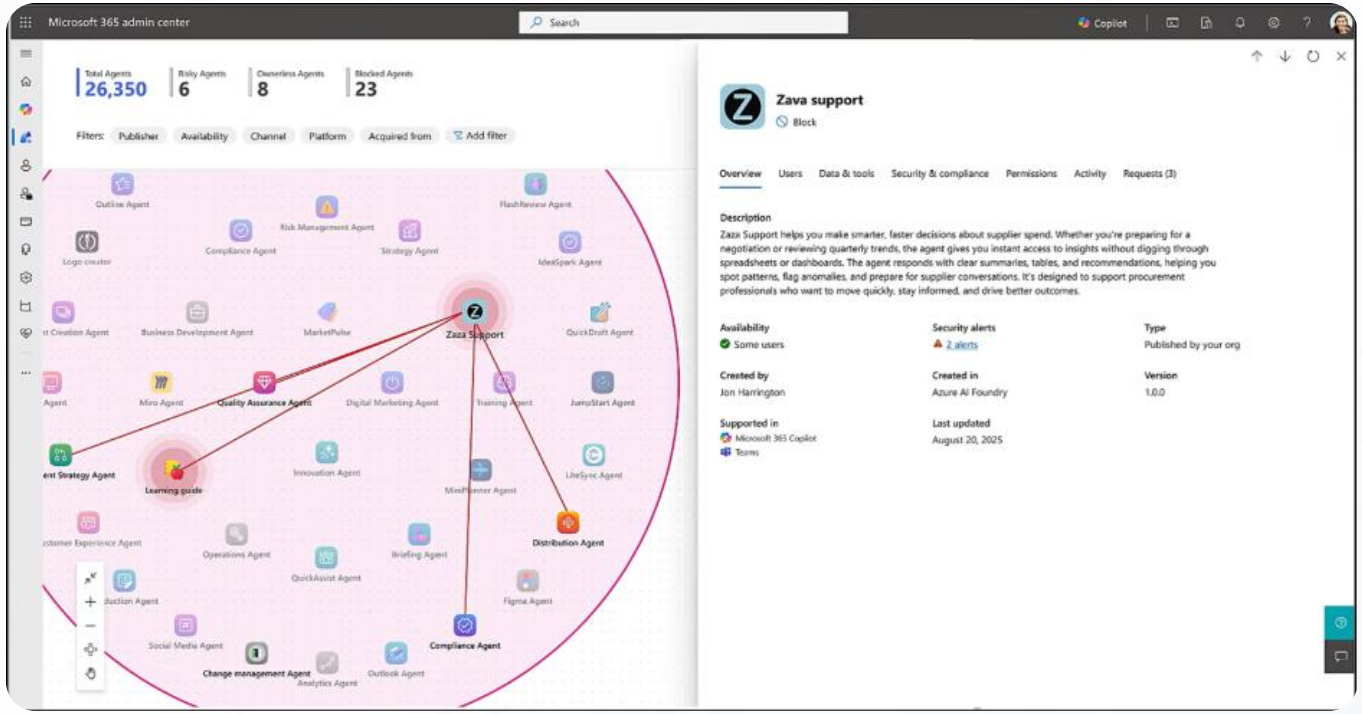

Displays agents spatially on a map to:

- Identify clusters
- Review agent metrics
- Access detailed agent information

Agent Details Available:

Publisher | Type | Platform | Version | Connectivity

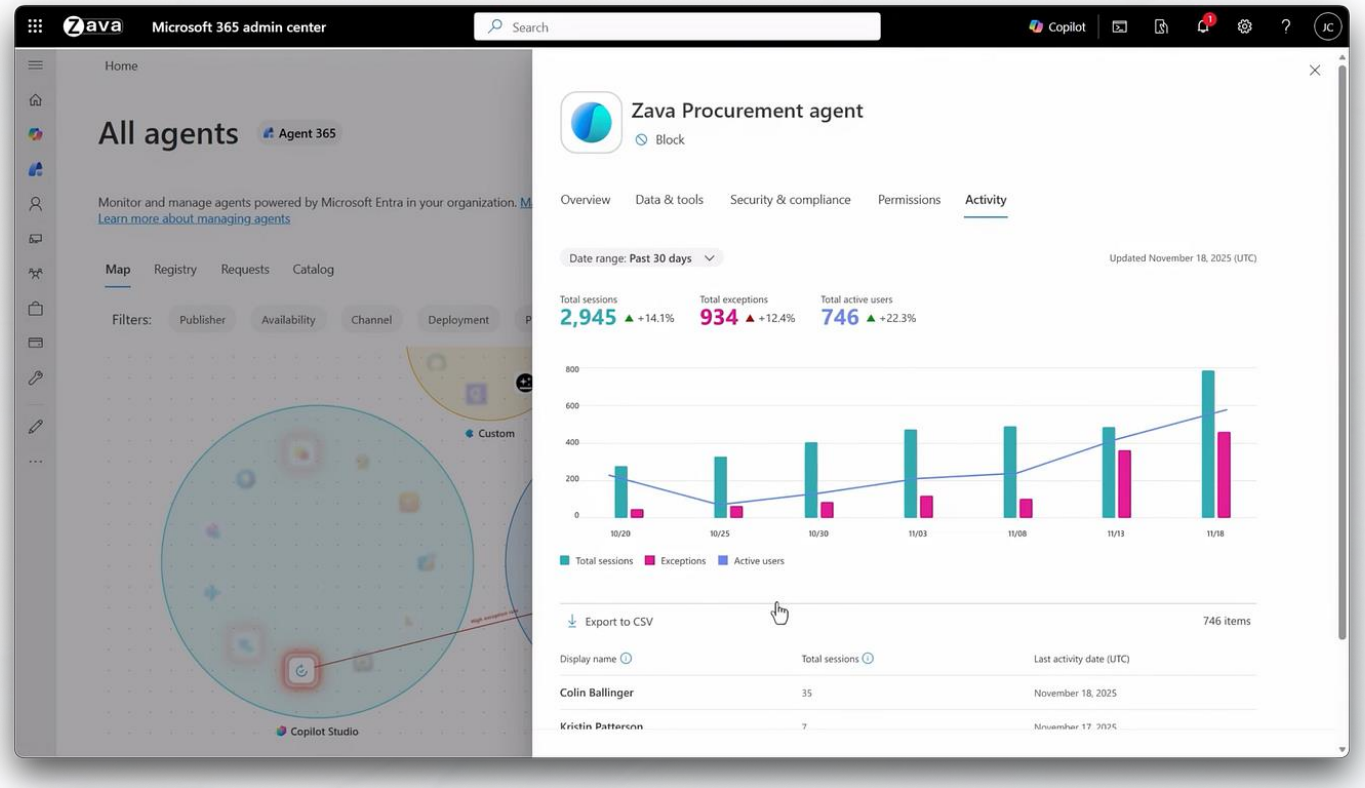

Data mirrors the Registry tab
(Visual, scalable complement for large environments)

Agent details

When you select an agent icon, you can see more details about the agent, including:

- **Details:**
  - Description.
  - Publisher.
  - Agent type.
  - Platform.
  - Last updated.
  - Version.
- **Users.**
- **Data and tools.**
- **Security and compliance.**
- **Agent activity.**

Navigating the Agent Map

Locate the Agent Map

Path: Microsoft 365 admin center → *Agents* → *All Agents*

- Eligible users see **Agent Map tab before Registry**
- Loads agents as grouped icons (by platform & metrics)

Built-in protections

Clusters include:

- Agent Builder in M365 Copilot
- Copilot Studio
- Microsoft 365 Agents Toolkit
- Microsoft Corporation
- Others
- Provides quick visibility into platform distribution.

Trust and transparency

Filter by:

- Platform
- Publisher
- Metrics (e.g., blocked agents)

Governing agent identities (Preview) and ownerless agents in Microsoft admin center

Agent identity sponsor tasks in Lifecycle Workflows (Preview)

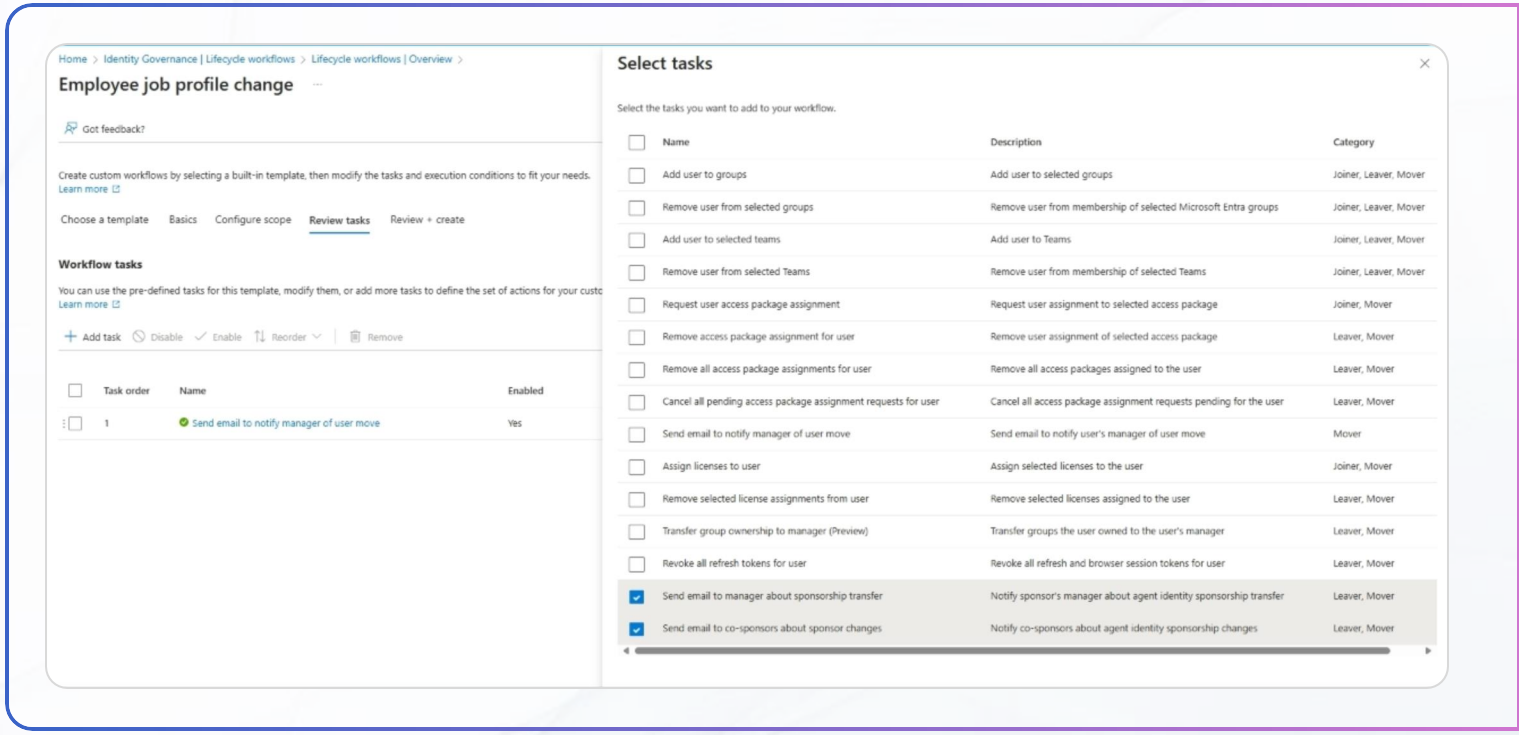

Sign in to **Microsoft Entra Admin Center**
(Lifecycle Workflows Admin)

Go to **ID Governance** → **Lifecycle workflows** → **Workflows**

Create or edit a *Mover* or *Leaver* workflow

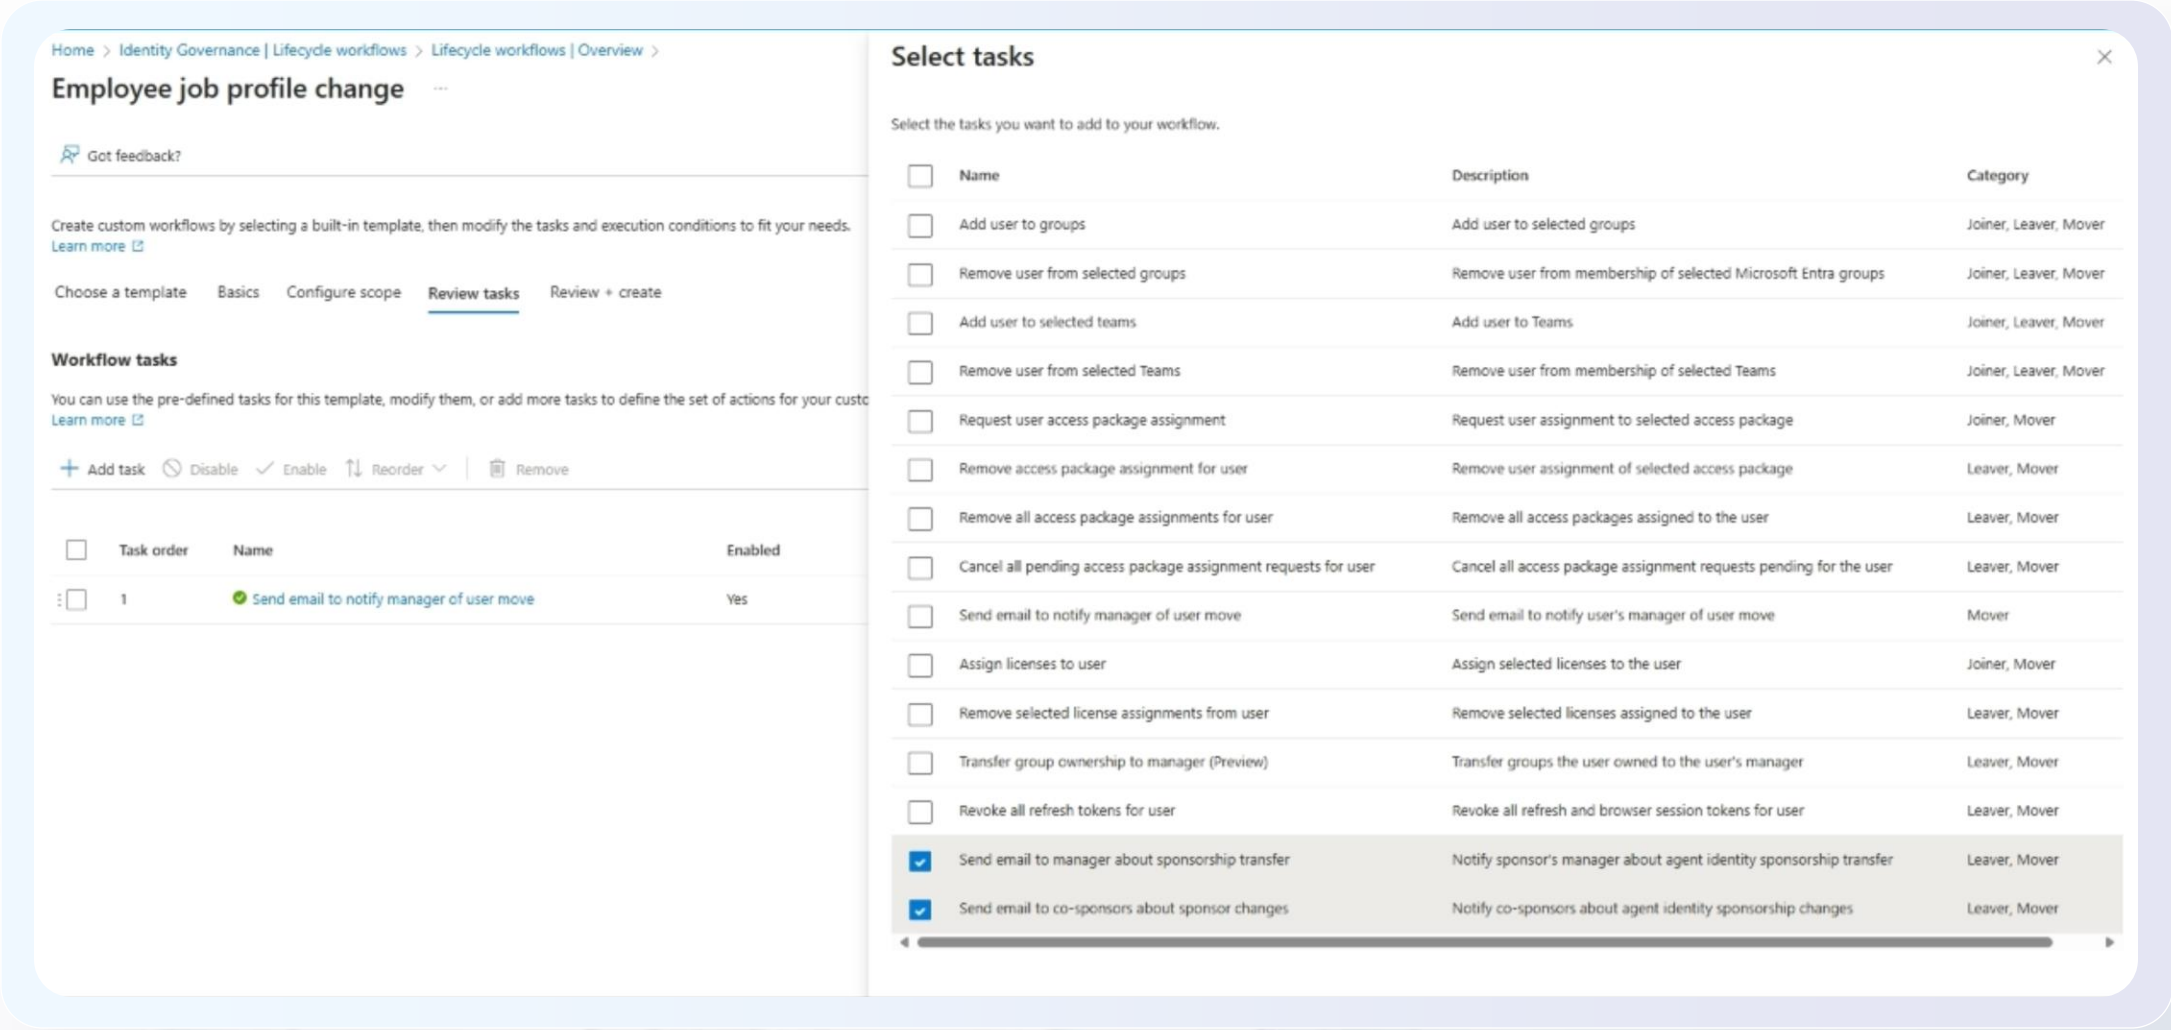

Add tasks:
Email manager about sponsorship changes
Email co-sponsors about sponsor changes

Review and create the workflow

Lifecycle Workflows automate governance of agent identity sponsors by notifying managers and co-sponsors when sponsor changes occur, supporting compliance and access oversight.

Agent identity sponsor tasks in Lifecycle Workflows (Preview)

Agent identity sponsors are responsible for overseeing the lifecycle and access decisions of agent identities.

Audit, logging and compliance with Microsoft Purview

Tools to secure and govern Microsoft 365 Copilot + A

Address oversharing concerns

- Gain visibility into overshared content
- Remediate excessive permissions
- Prevent Copilot + Agents from processing sensitive files

Protect against data loss and insider risks

- Get alerts and reports of risky behavior and AI use
- Protect sensitive files and interactions
- Dynamically apply security policies based on risky actions

Govern AI use to meet regulations & policies

- Inspect interaction content and audit logs
- Investigate for compliance and ethical violations
- Enforce lifecycle policies and legal holds

Set and enforce site access and sharing settings

Automatically protect file access and sharing

Govern how Copilot can interact with sensitive data

DLP for Copilot + Agents

Prevent Copilot + Agents from processing sensitive files

Microsoft Purview

Ensure right access to data and files

Tools to secure and govern Microsoft 365 Copilot + A

Address oversharing concerns

- Gain visibility into overshared content
- Remediate excessive permissions
- Prevent Copilot + Agents from processing sensitive files

Protect against data loss and insider risks

- Get alerts and reports of risky behavior and AI use
- Protect sensitive files and interactions
- Dynamically apply security policies based on risky actions

Govern AI use to meet regulations & policies

- Inspect interaction content and audit logs
- Investigate for compliance and ethical violations
- Enforce lifecycle policies and legal holds

Secure

Govern

To prevent data loss and insider risks, organizations need to…

Get **alerts and reports** of risky behavior and AI use

Protect **sensitive files** and interactions

Dynamically apply security policies based on risky actions

DSPM

View reports and insights about sensitive data use in Copilots and Agents

See the text of Copilot + Agent prompts, responses, and search queries

Information Protection

Surface data classification in interactions

Copilot responses inherit sensitivity labels and protections

Insider Risk Management

Identify patterns of risky behavior using AI

Automatically add users to stricter security policies until investigated

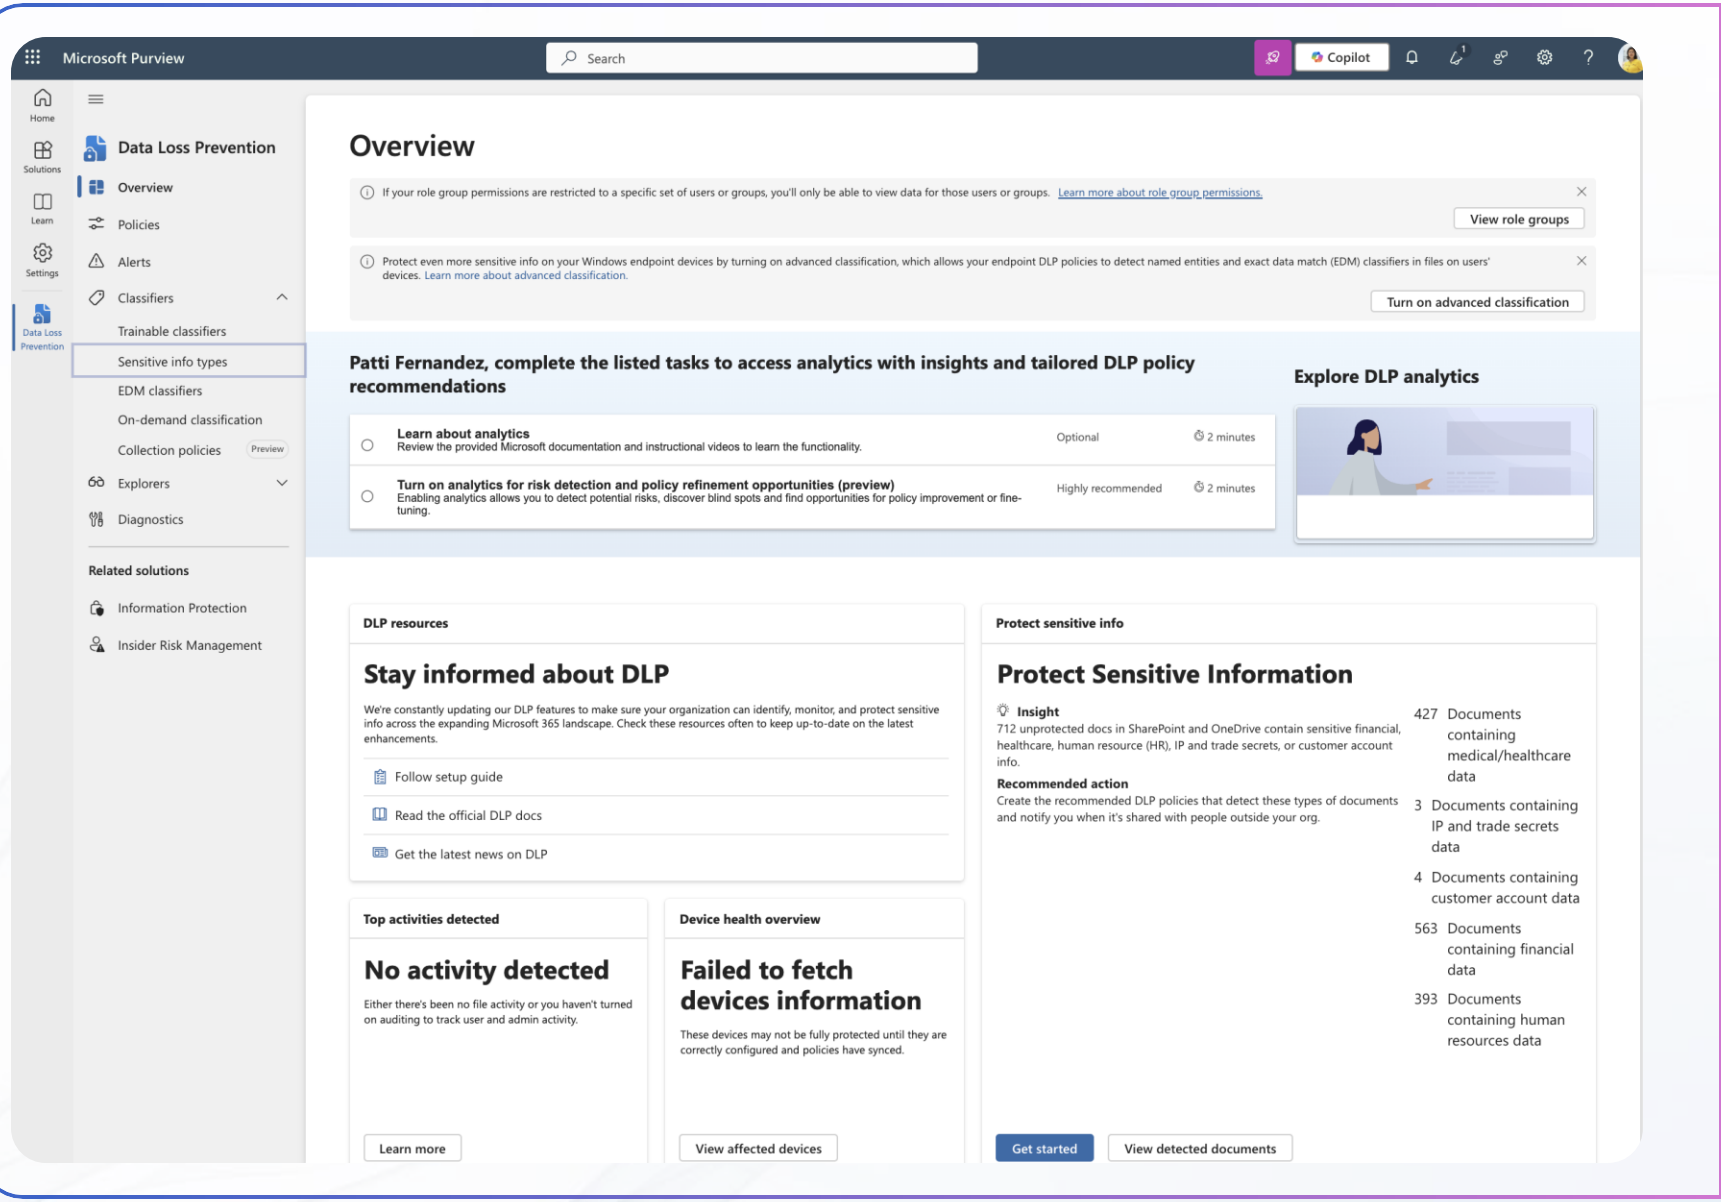

Microsoft Purview

Ensure right access to data and files

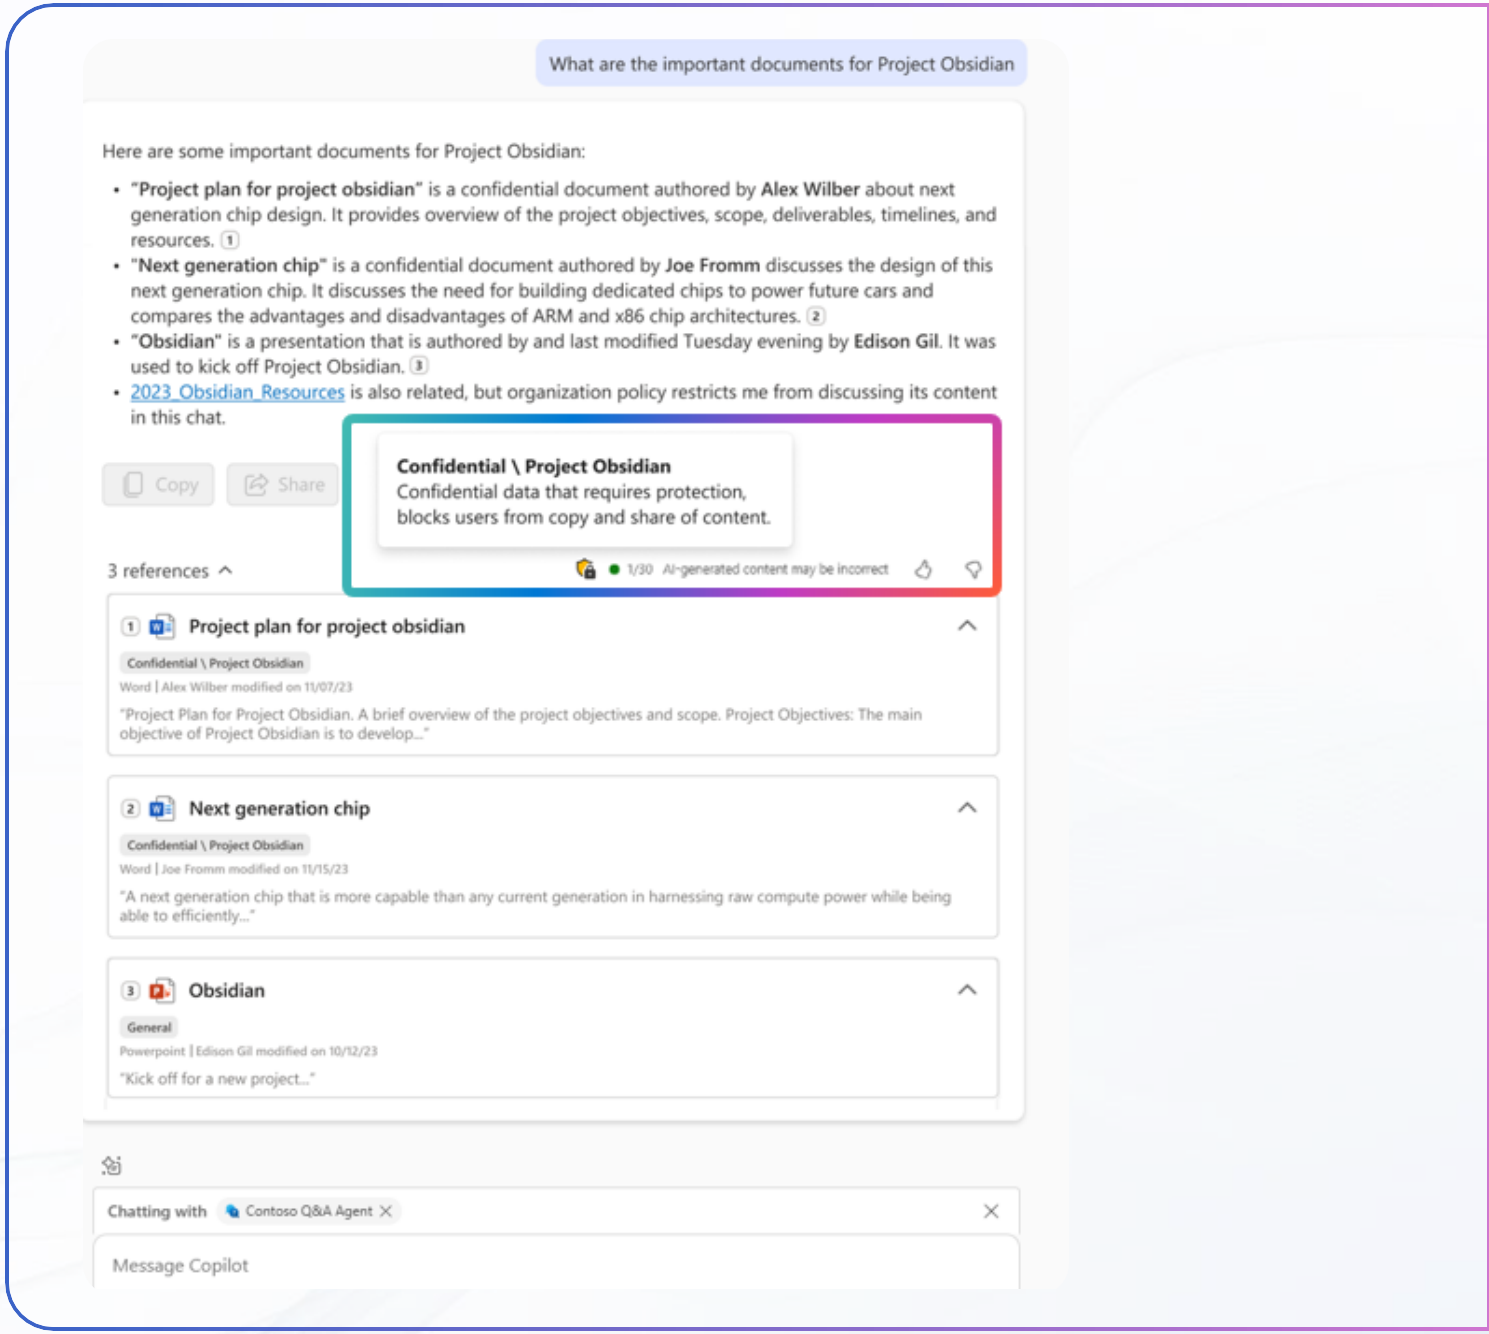

Microsoft Purview:
Data classification

Microsoft Purview Data classification identifies and tags sensitive data across Microsoft services using built-in or custom classifiers, enabling compliance and surfacing AI-related data insights in reports and activity explorer..

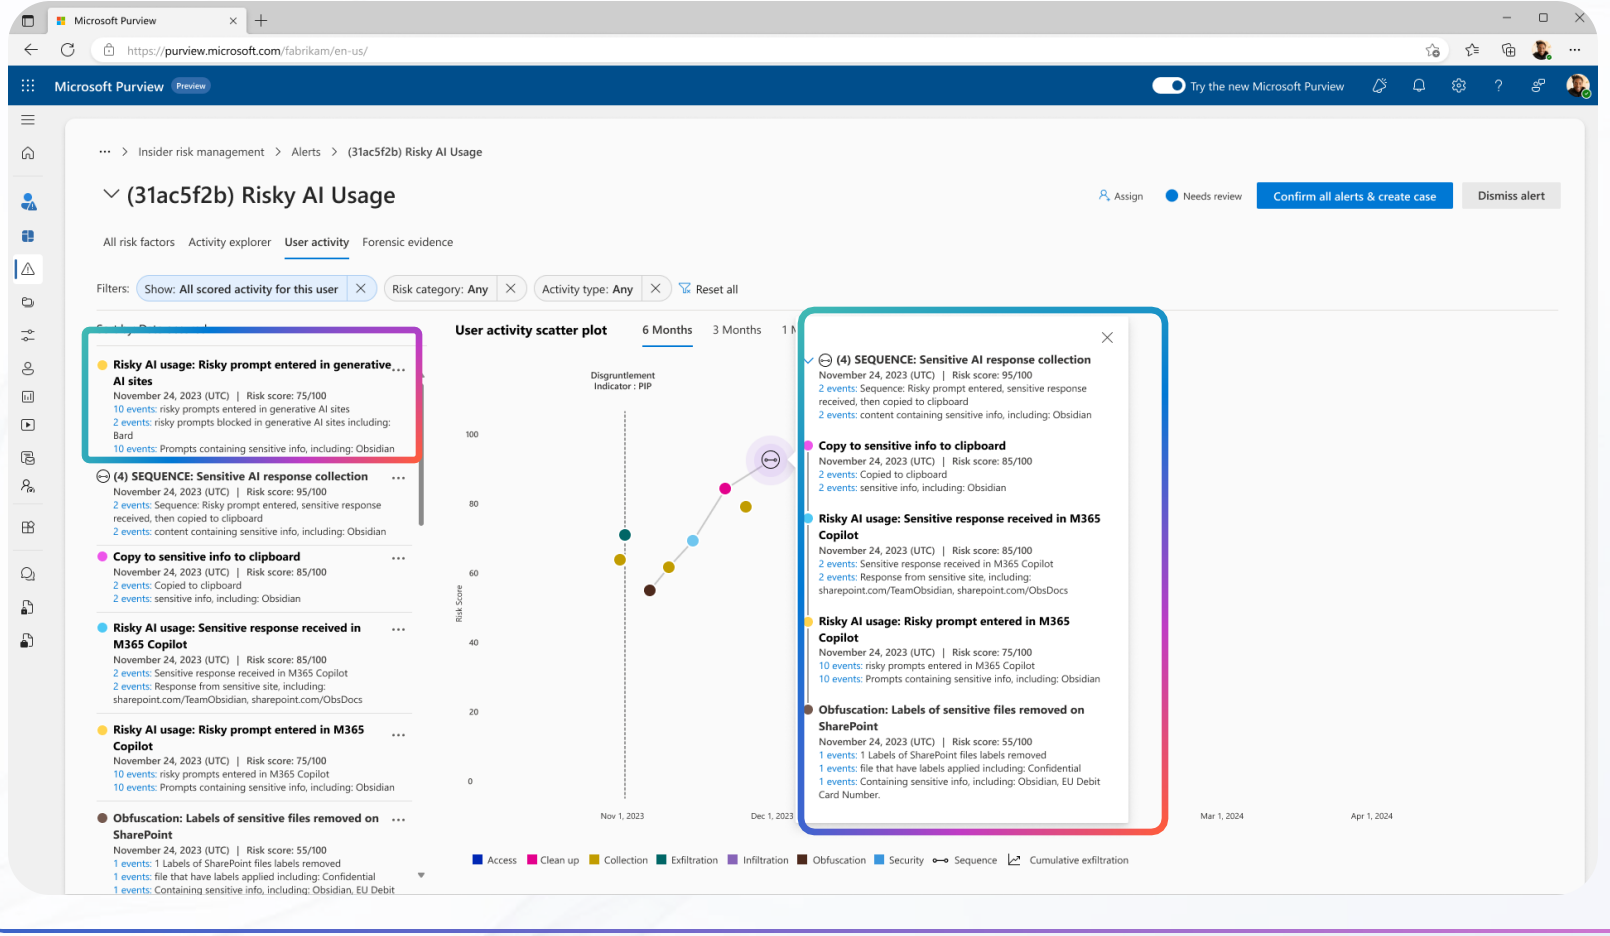

Microsoft Purview:
Sensitivity labels

Copilot and agent conversations **honor sensitivity labels and cite sensitivity labels** for files referenced in prompts and responses.

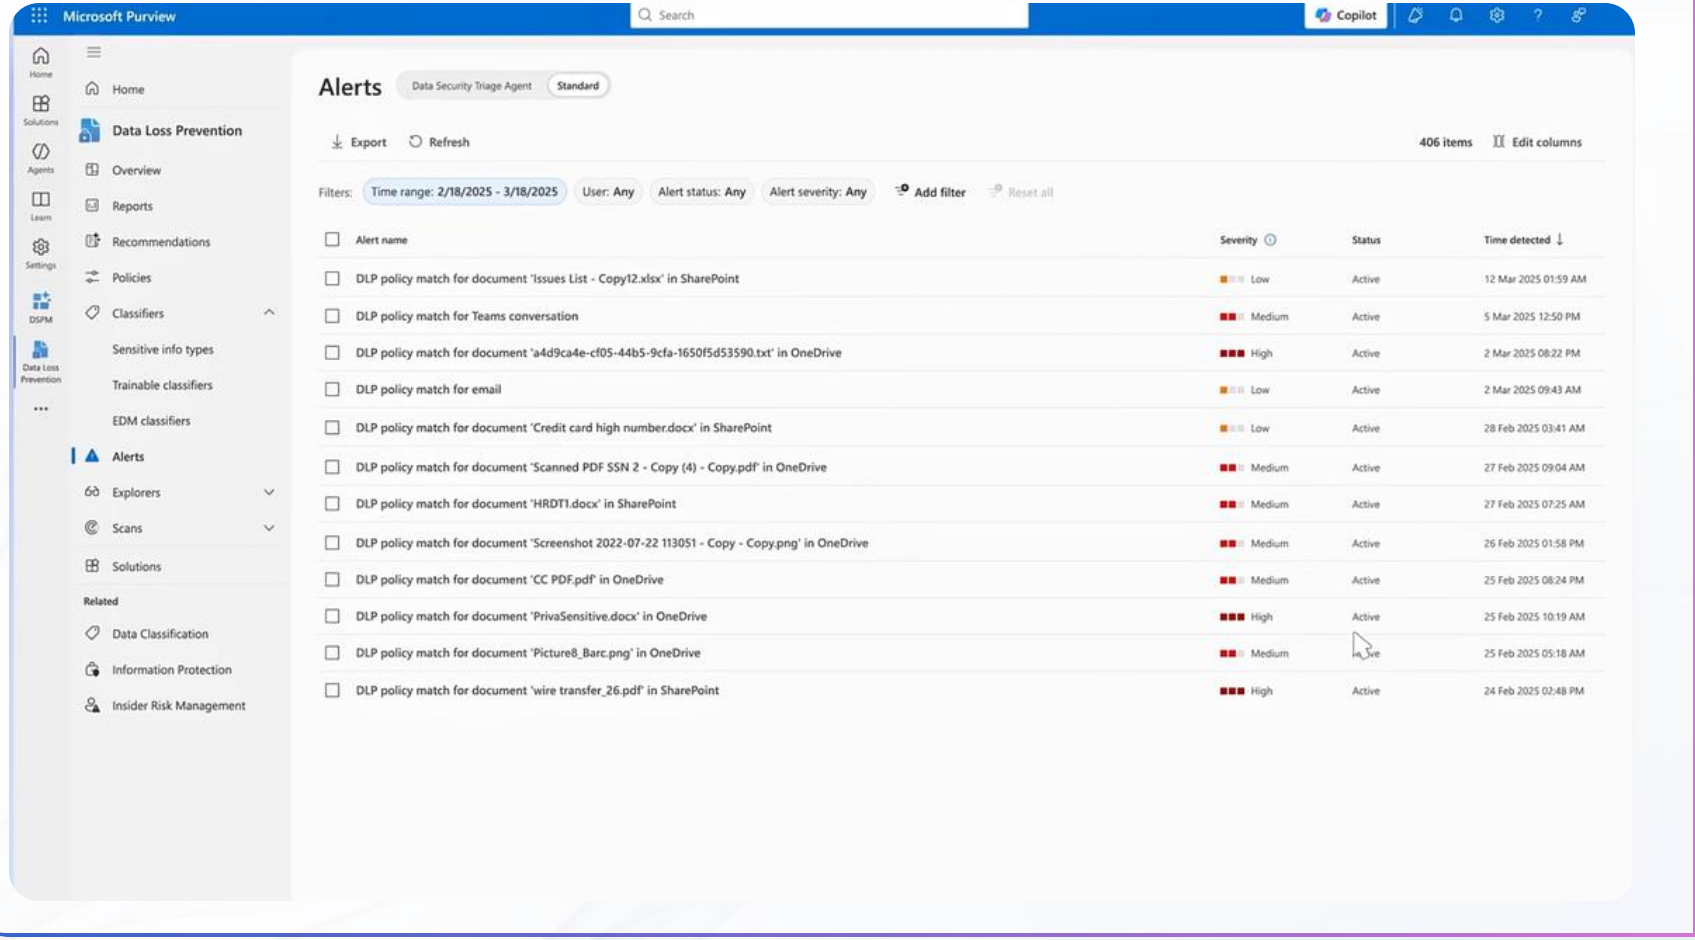

Microsoft Purview:
Insider Risk Management

Detect **risky AI prompts and responses** such as a malicious user attempting to access and hunt for sensitive data in an under-permissioned SharePoint data site across agents and AI apps.

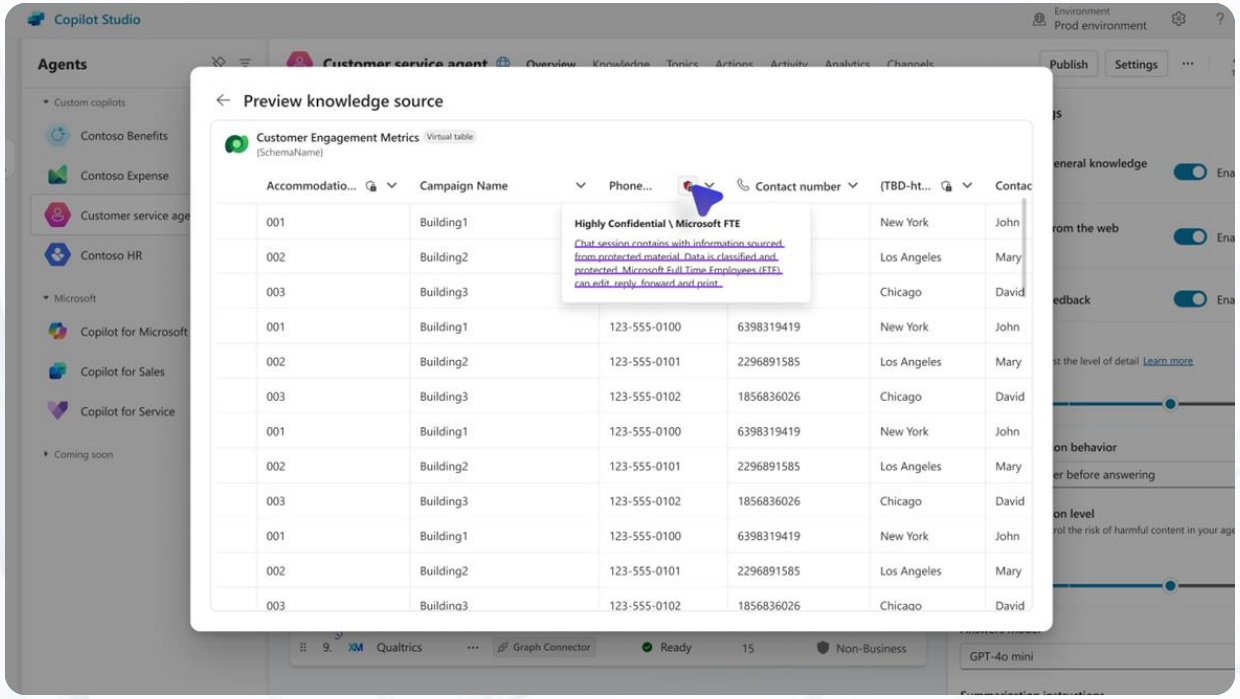

Microsoft Purview:
Data Loss Prevention

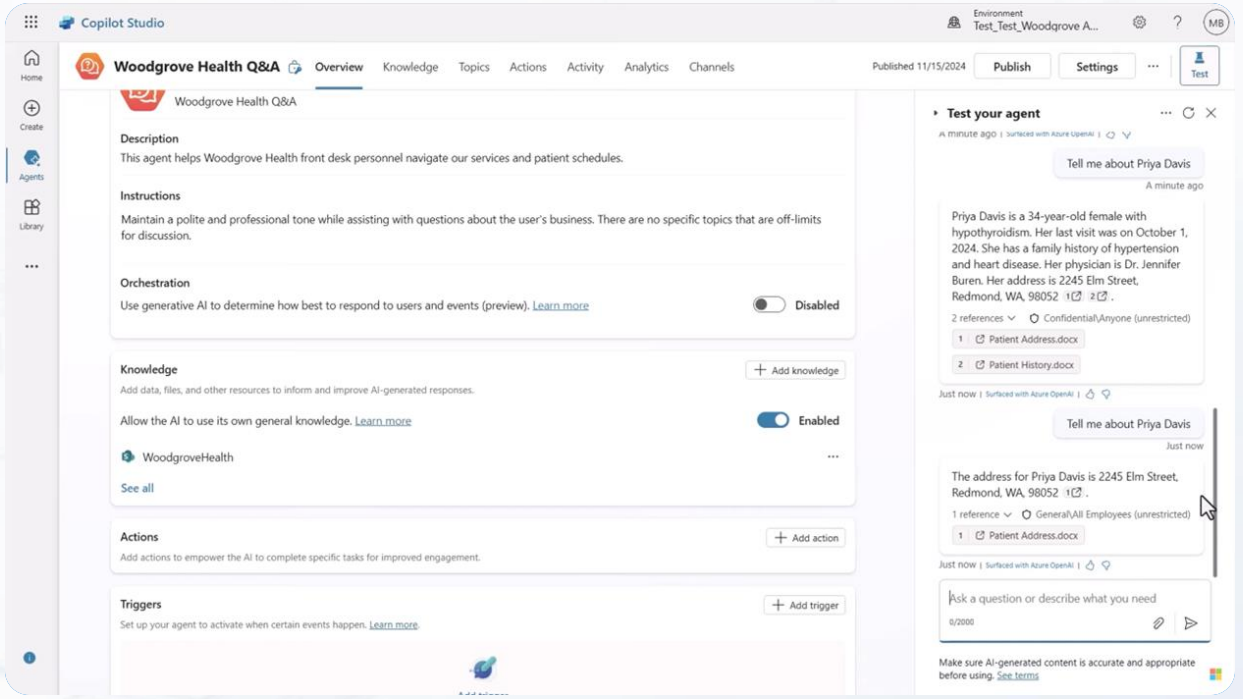

Microsoft Purview DLP identifies and protects sensitive data across Microsoft 365 and endpoints using content inspection and policies, including blocking or warning users when sharing such data with generative AI apps.

Microsoft Purview:
Information Protection for agent knowledge sources

Information Protection for more knowledge sources

Information Protection for more SharePoint

Microsoft Purview DSPM addressing top priorities

Ensuring simple and efficient data security across data estate

- Outcome-based workflows
- Enhanced posture reporting

Adopting and leveraging AI and agents with confidence

- Extended Data Risk Assessments
- AI Observability

Applying AI to accelerate and scale teams

- Data Security Triage Agent
- Data Security Posture Agent

Microsoft Purview API in Microsoft Graph

Apps built on the Microsoft Purview API can:

- Detect and interpret data sensitivity labels and classifications.
- Enforce policies defined in the Microsoft Purview portal.
- Prevent data misuse by aligning with compliance and security requirements.
- Deliver a seamless and trusted user experience by applying policies natively.

When you integrate your application with the Microsoft Purview API, you can:

- Focus on your app's core value while supporting data security and compliance outcomes.
- Help customers meet data security and compliance requirements, enabling app adoption.
- Empower users to interact securely and compliantly, improving productivity.

Specific Outcomes for Enterprise AI apps integrating with Microsoft Purview APIs

Prevent data loss

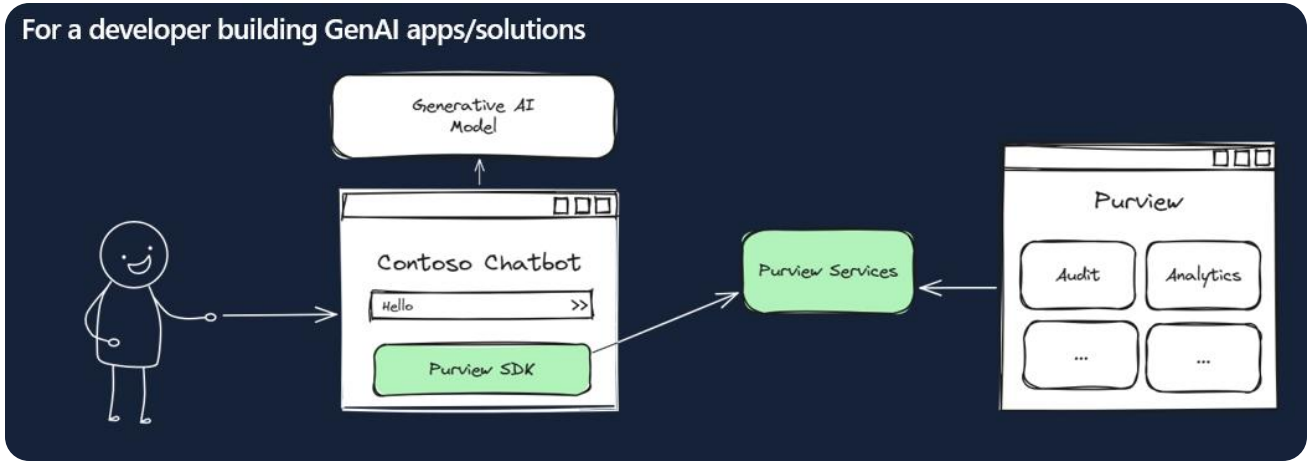

- Enable inline blocking of sensitive data using enterprise DLP policies
- Support IRM alerts based on policies

Address oversharing

- Honor sensitivity labels in grounding data
- Inherit most sensitive labels to AI responses

Enable AI governance

- Send AI prompts/responses to Purview for visibility
- Support compliance outcomes: Audit, eDiscovery, DLM, CC, and risk analytics

Defend agents against threats, vulnerabilities and attacks

Strengthen your AI security posture from code-to-cloud

AI security posture management

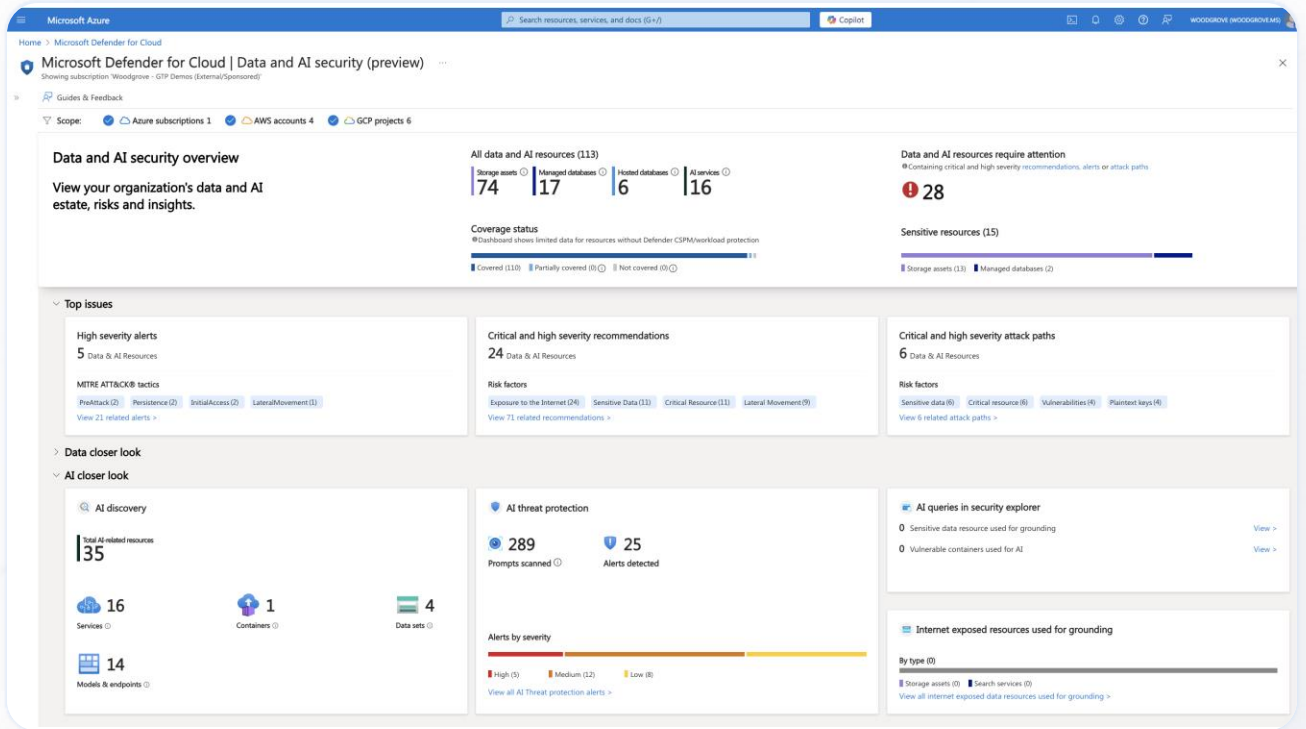

Gain visibility across your AI services including Azure OpenAI Service, Microsoft Foundry, Azure ML, Amazon Bedrock, and Google Vertex AI

Detect AI models in use—including Model as a Service (MaaS), custom-built models and fine-tuned models

Map attack paths to find direct and indirect exploitable risks to your AI workloads

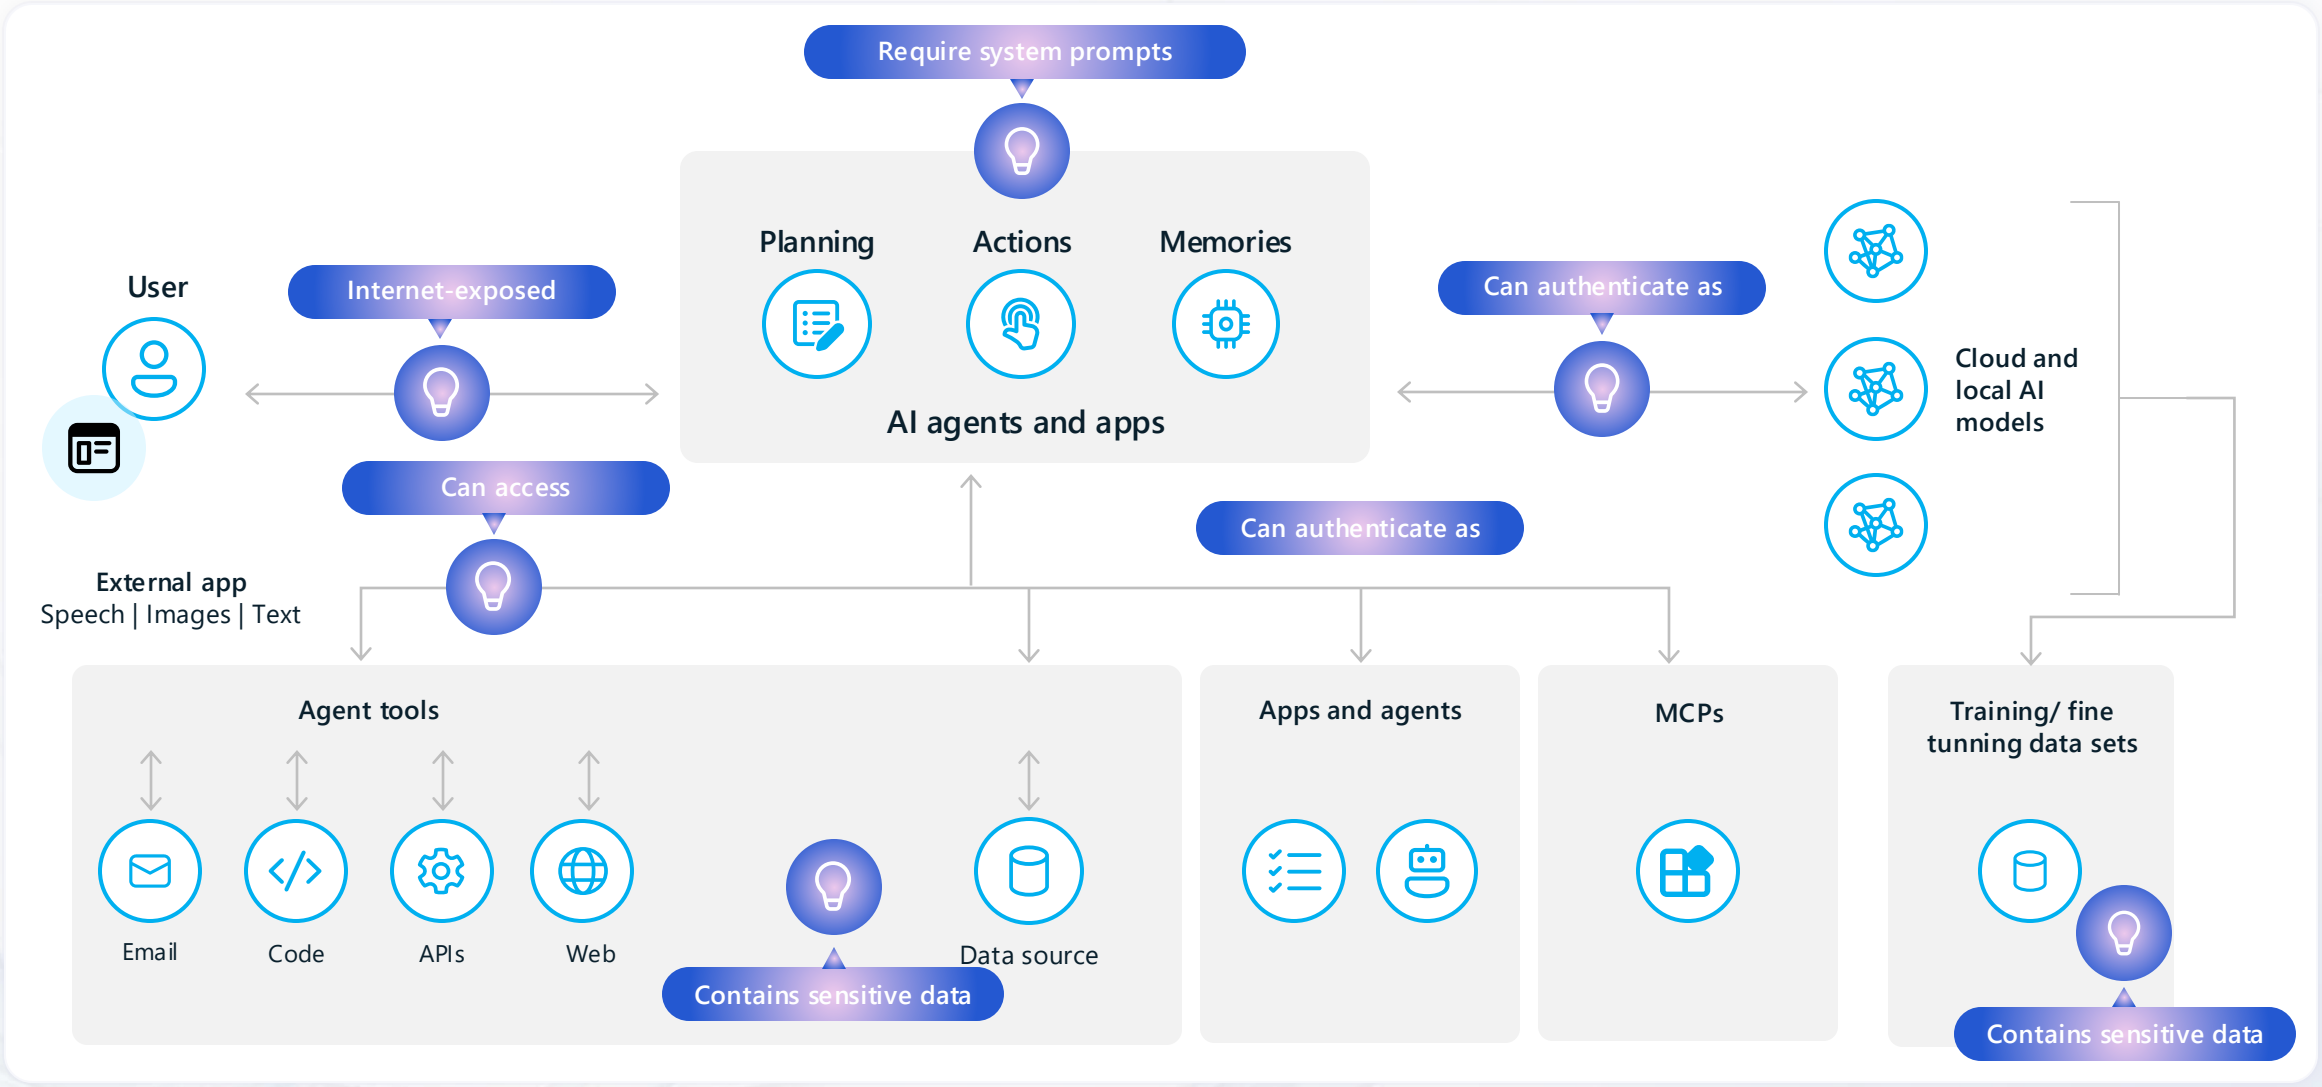

Identify and remediate cross-cloud misconfigurations and attack paths across AI pipelines, deployments, and risks to sensitive data stores

Single pane of glass over data and AI—focus on urgent issues and gain insights into AI discovery, security posture and threat protection

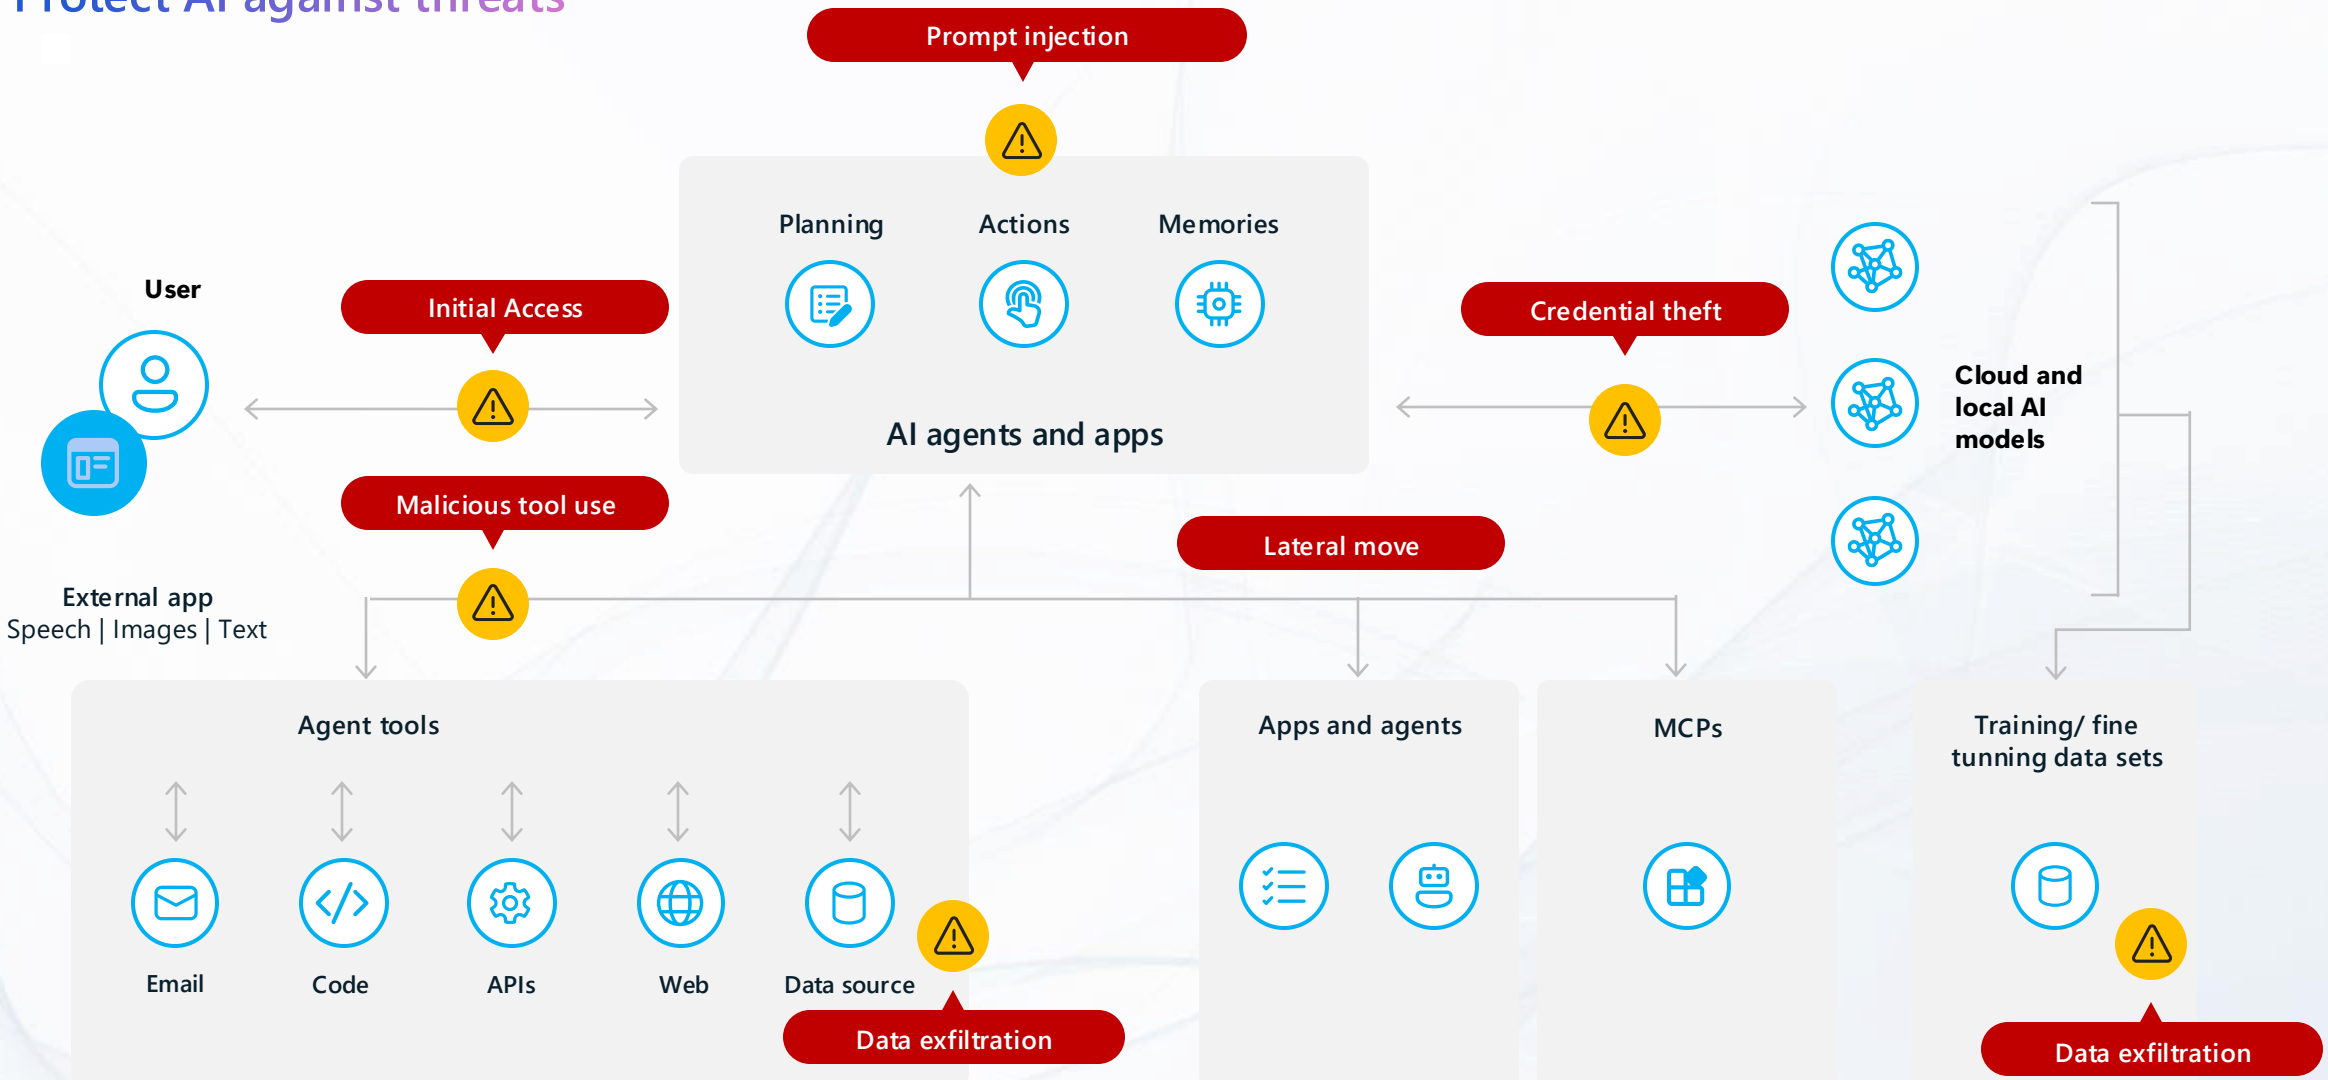

Strengthen your AI security posture from build to runtime

AI security posture management

Threat landscape for agentic AI

Protect AI against threats

Protect AI assets from build to runtime with Defender

Start secure

- Get comprehensive visibility of AI assets
- Identify and remediate vulnerabilities among AI assets
- Prioritize and reduce risks across cloud and AI

Stay secure

- Continuously monitor for malicious AI activities
- Detect and respond to AI-specific attacks in real time
- Correlate and contextualize threat signals into incidents

Copilot Studio Microsoft Foundry Amazon Bedrock Vertex AI

Protect your environment in real-time during agent runtime

Risk Context

- LCNC platforms (e.g., Copilot Studio) enable rapid agent deployment without centralized security controls
- Threats: prompt injection, malicious tool execution, privilege escalation, data exfiltration

Defender Real-Time Protection

- Inspects tool invocations before execution
- Evaluates prompts for suspicious or malicious intent

If Suspicious Activity Is Detected

- Tool invocation is blocked pre-execution
- User is notified of the blocked action
- Alert generated in Microsoft Defender (XDR Incidents & Alerts)

Using Advanced Hunting to analyze Copilot Studio AI Agents

STEP 1

Access Advanced Hunting

- Sign in to the Microsoft Defender portal
- Navigate to: Investigation & response → Hunting → Advanced hunting

STEP 2

Use Agent Data (Custom Queries)

- In the Apps & identities section, locate the AIAgentsInfo table
- Contains metadata for all custom Copilot Studio AI agents
- Use this table to build KQL-based custom hunting queries

STEP 3

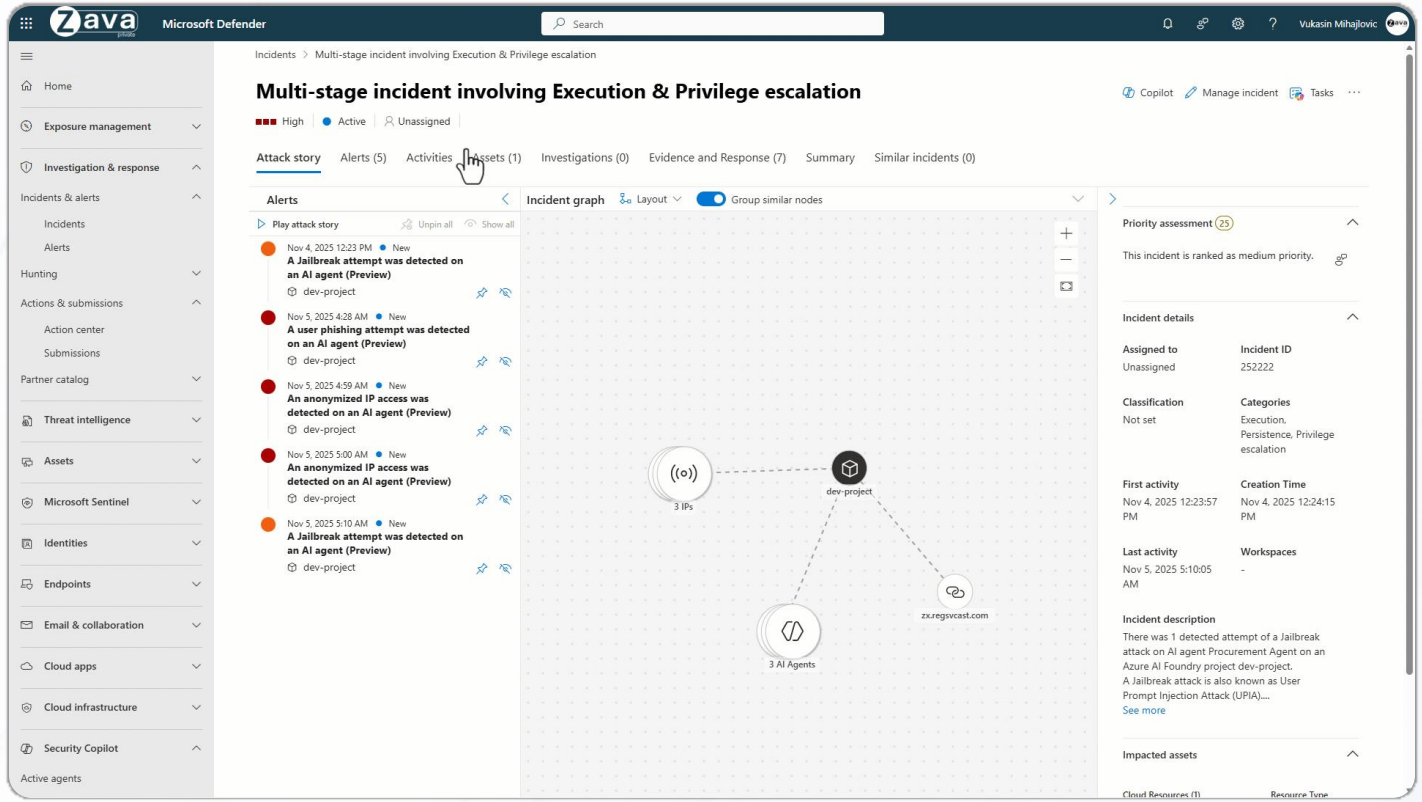

Use Community Queries

- In Advanced hunting, open the Queries tab
- Select Community queries
- Open the AI Agents folder
- Run predefined queries to identify misconfigured or risky agents

Monitor for malicious activities

Protect AI against threats

Detect suspicious AI model interactions, agentic tool calling, memory changes, and LLM invocations, powered by Microsoft Threat Intelligence

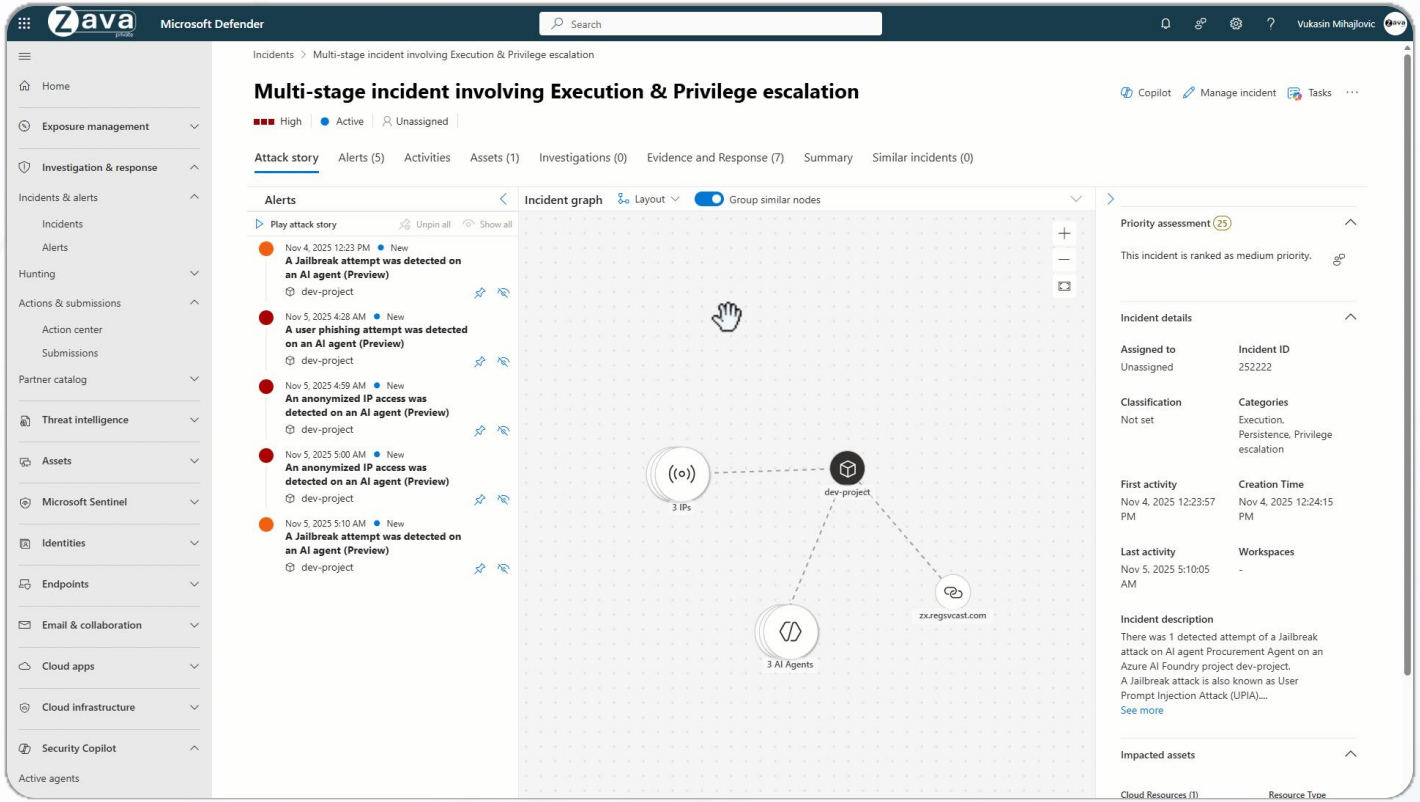

Detect and respond to attacks in real-time

Protect AI against threats

Get AI model alerts related to jailbreak, sensitive data exposure, and credential theft

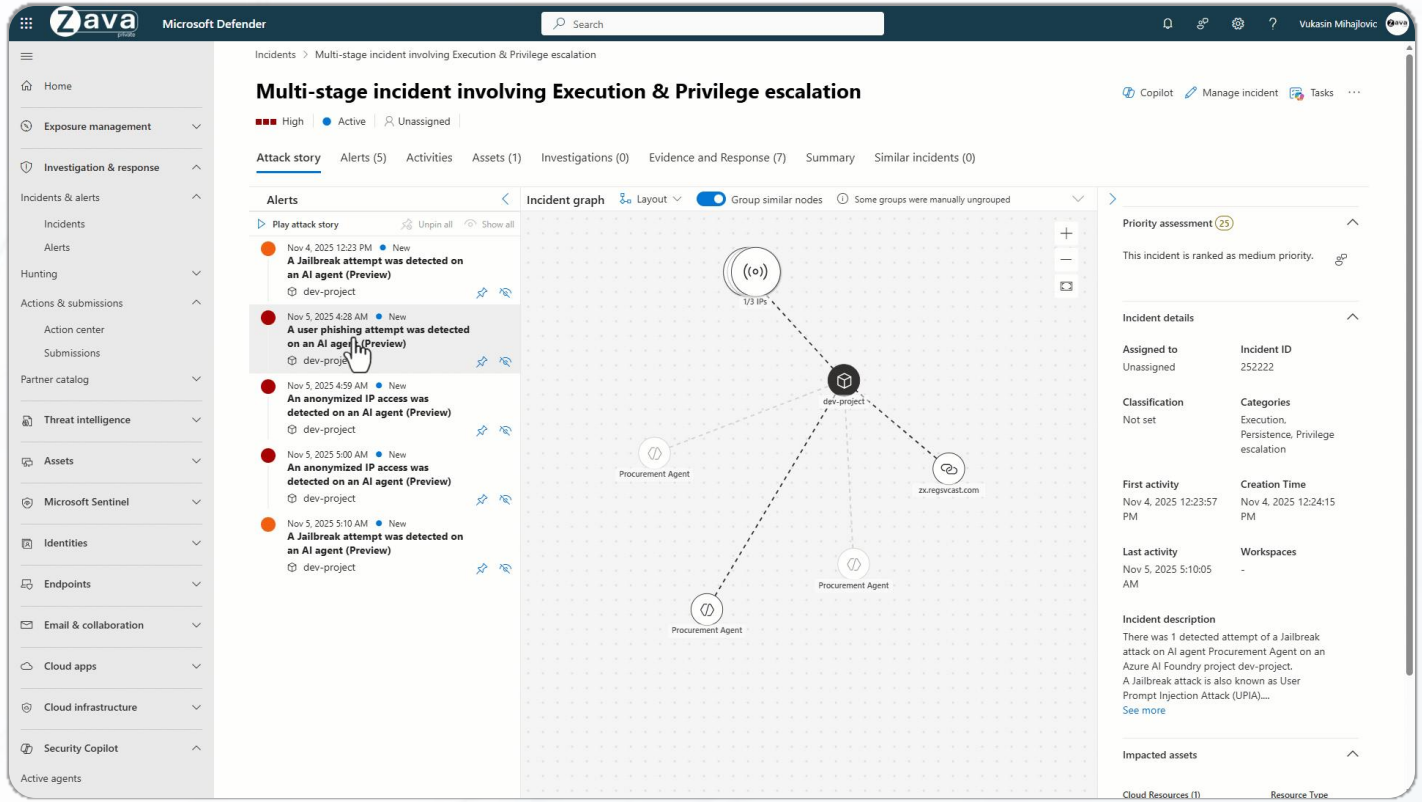

Protect against agent-specific threats like intent breaking, goal manipulation, tool misuse, and privilege compromise

Correlate and contextualize threats

Protect AI against threats

Accelerate incident investigation via integrations with Defender XDR and SIEM

Detect threats across diverse forms and patterns

Protect AI against threats

Suspicious content

- Jailbreak (malicious intent)
- Secrets and sensitive data
- Malicious URLs
- Encodings and manipulations

Microsoft Defender

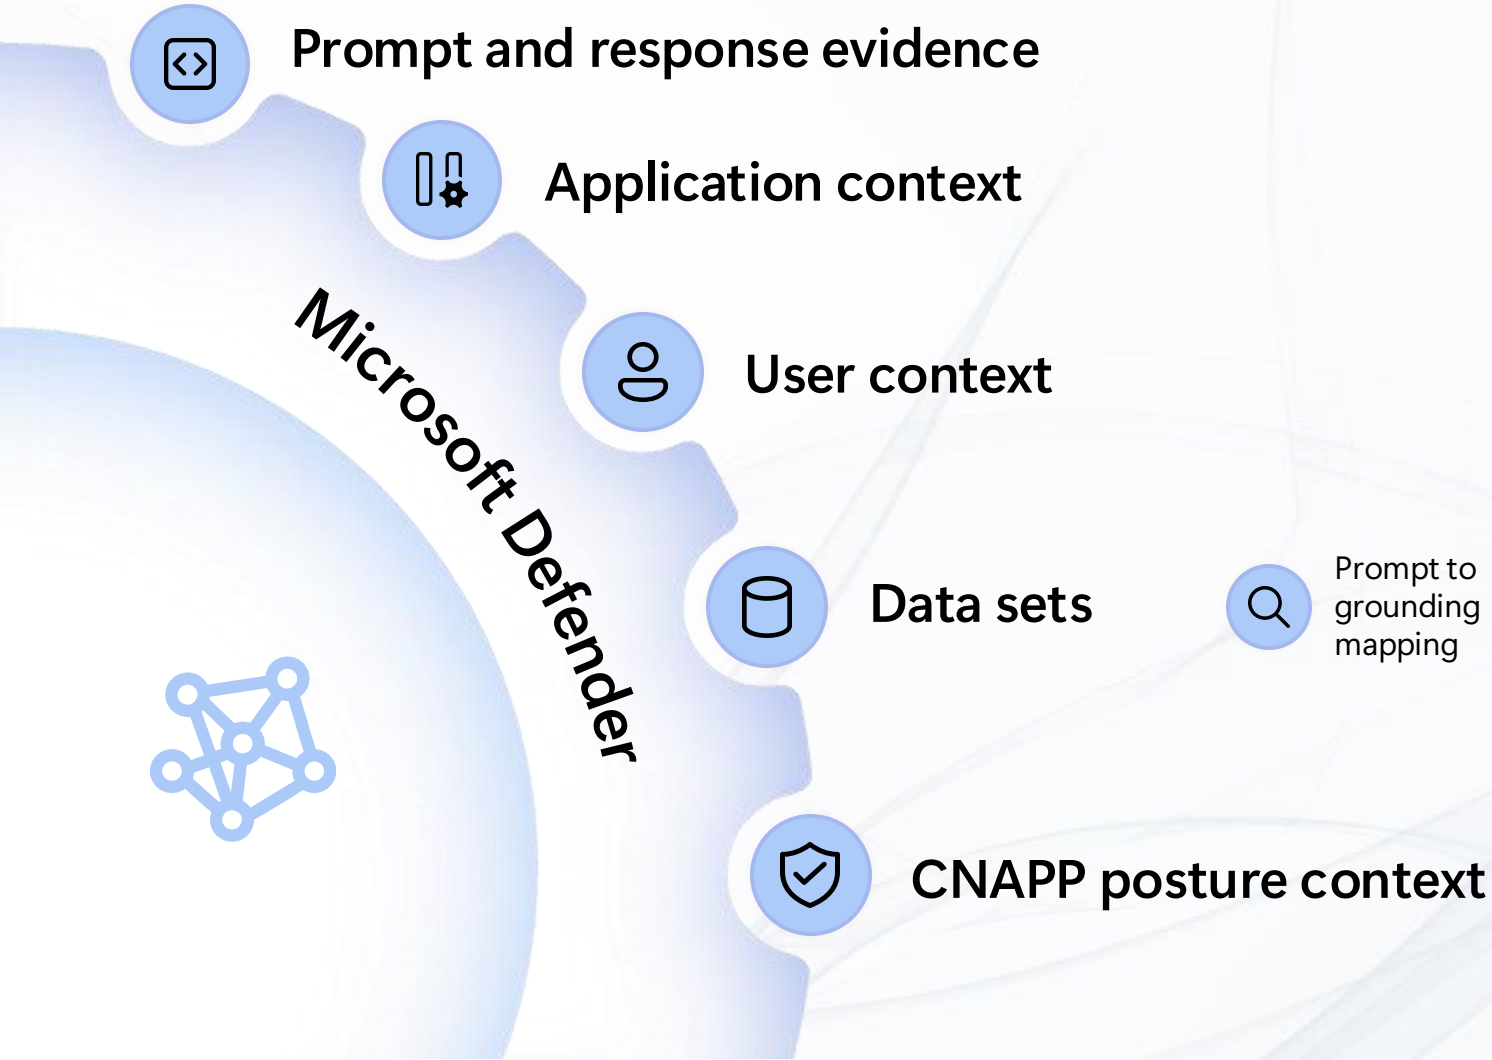

Suspicious behaviors

- User/ agent behavior
- Application behavior
- Tool behavior
- Access parameters
  (powered by Microsoft Threat Intelligence)

Investigate and respond with rich context

Protect AI against threats

What was the user's interaction with the model? Which applications were involved?

Where did the information provided by the model originate?

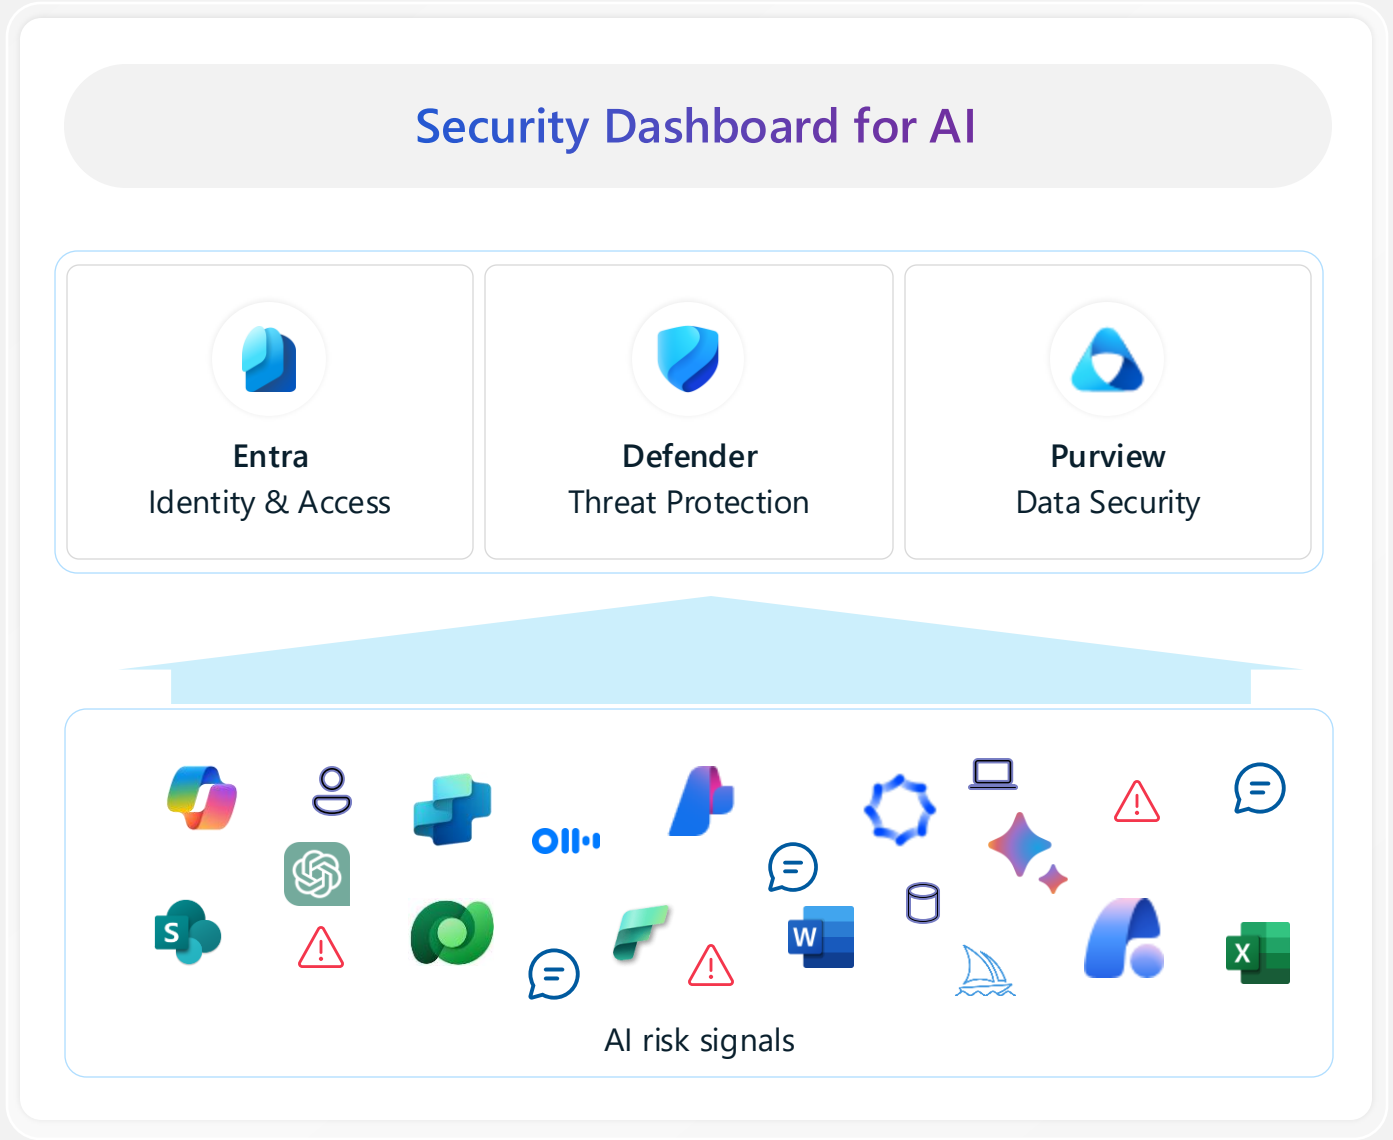

How can these insights enhance my security posture?

Security Dashboard for AI, Microsoft Security Copilot and Security Store

Public Preview

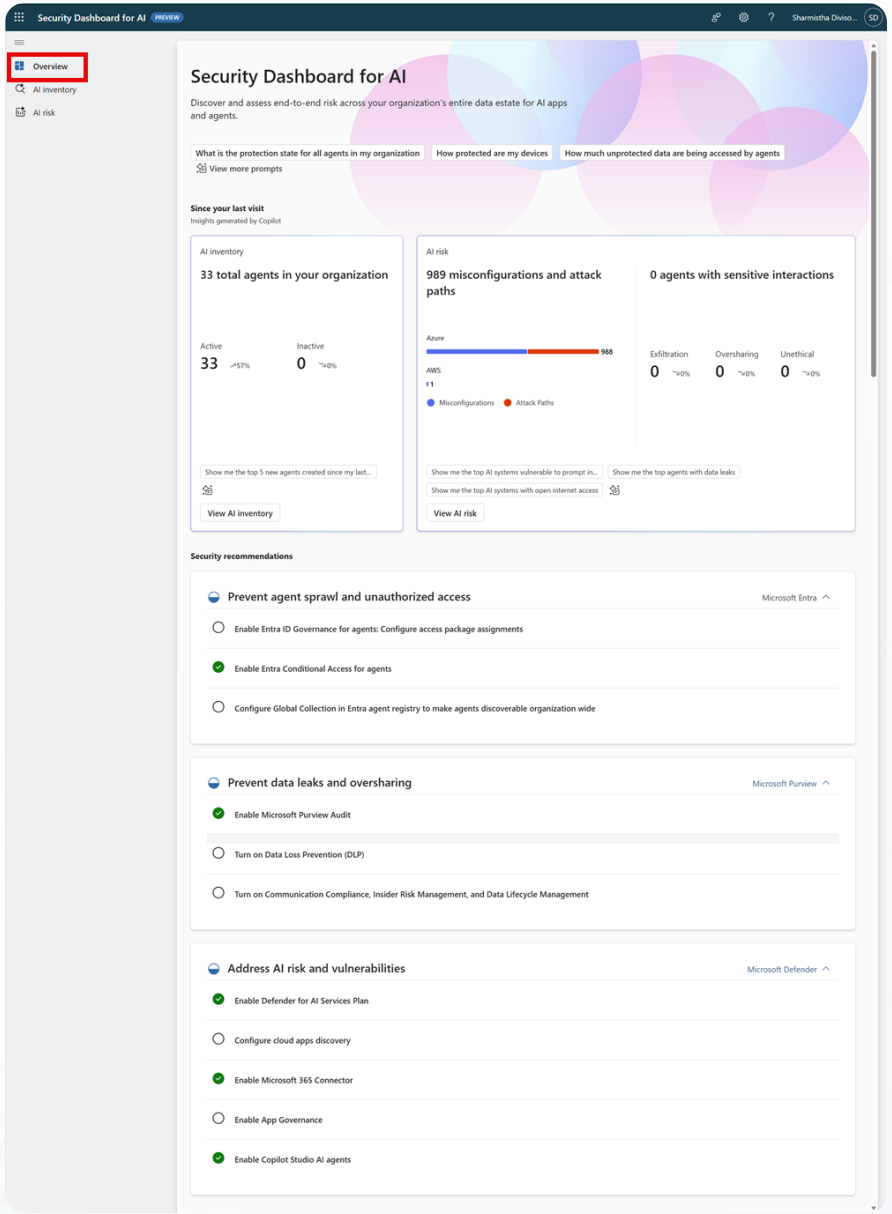

Security Dashboard for AI

- **Unified AI risk visibility**
- **Prioritize critical risks**
- **Drive risk mitigations**

How Security Dashboard for AI works

Product	Key capabilities and dashboard insights
Microsoft Entra	• Identity management • Conditional access • Privileged identity management
Microsoft Defender	• Threat protection • Cloud security posture • App security
Microsoft Purview	• Data classification • Data loss prevention • Insider risk management
Microsoft Security Copilot	• Prompt-based exploration • Enhanced AI risk insights • Enhanced agent discovery and categorization

Demo

Assess your organization's AI risk with Microsoft Security Dashboard for AI

Empowering IT and security

Microsoft holistic approach to AI

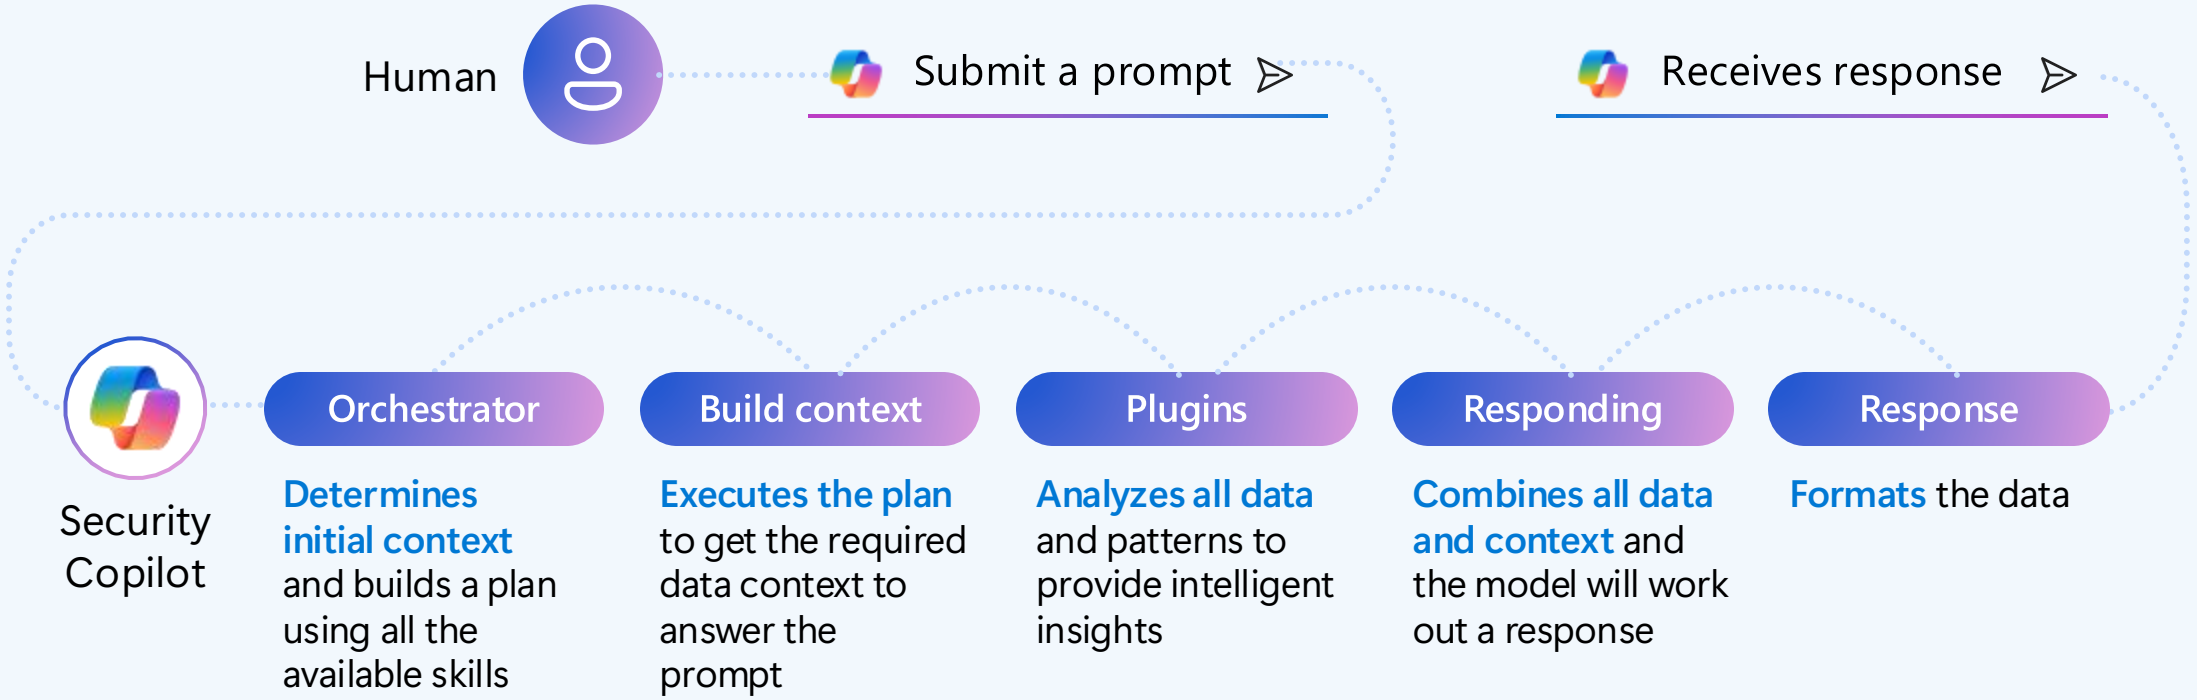

Security Copilot: A generative AI-powered assistant

30% reduction in mean time to resolution[1]

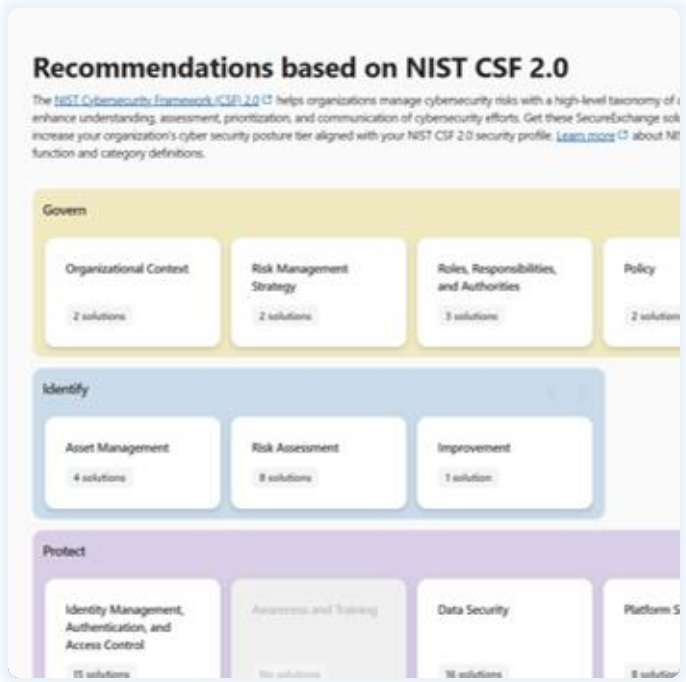

1. aka.ms/SecurityCopilotMTTRResearch

How Security Copilot works

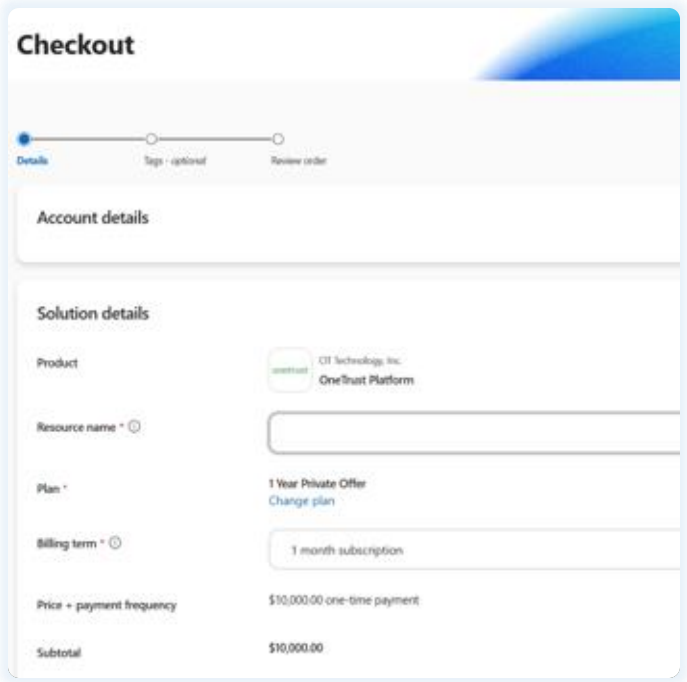

Microsoft Security Store

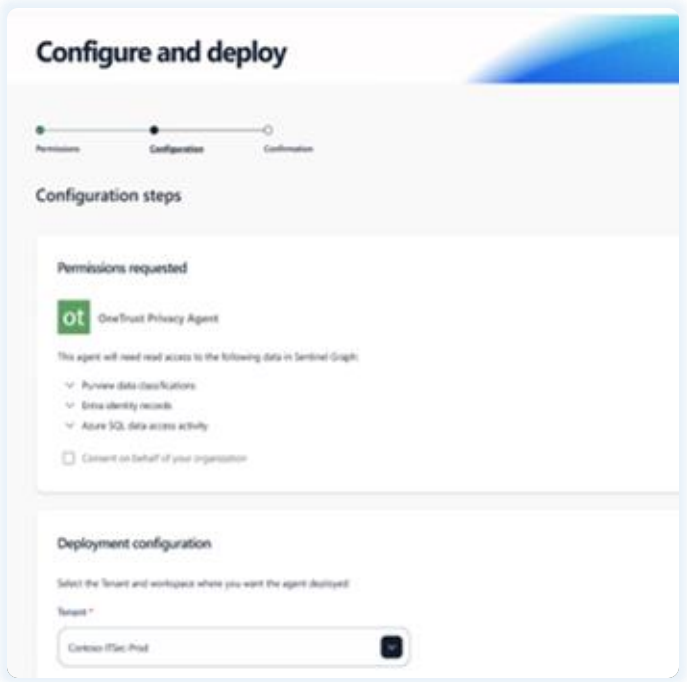

Discover, try, and deploy trusted security agents and solutions

Recommended solutions tailored for your security posture

Simplified and shortened purchasing cycles

Streamlined deployment in just a few clicks

Responsible AI practices

Design and safeguard applications

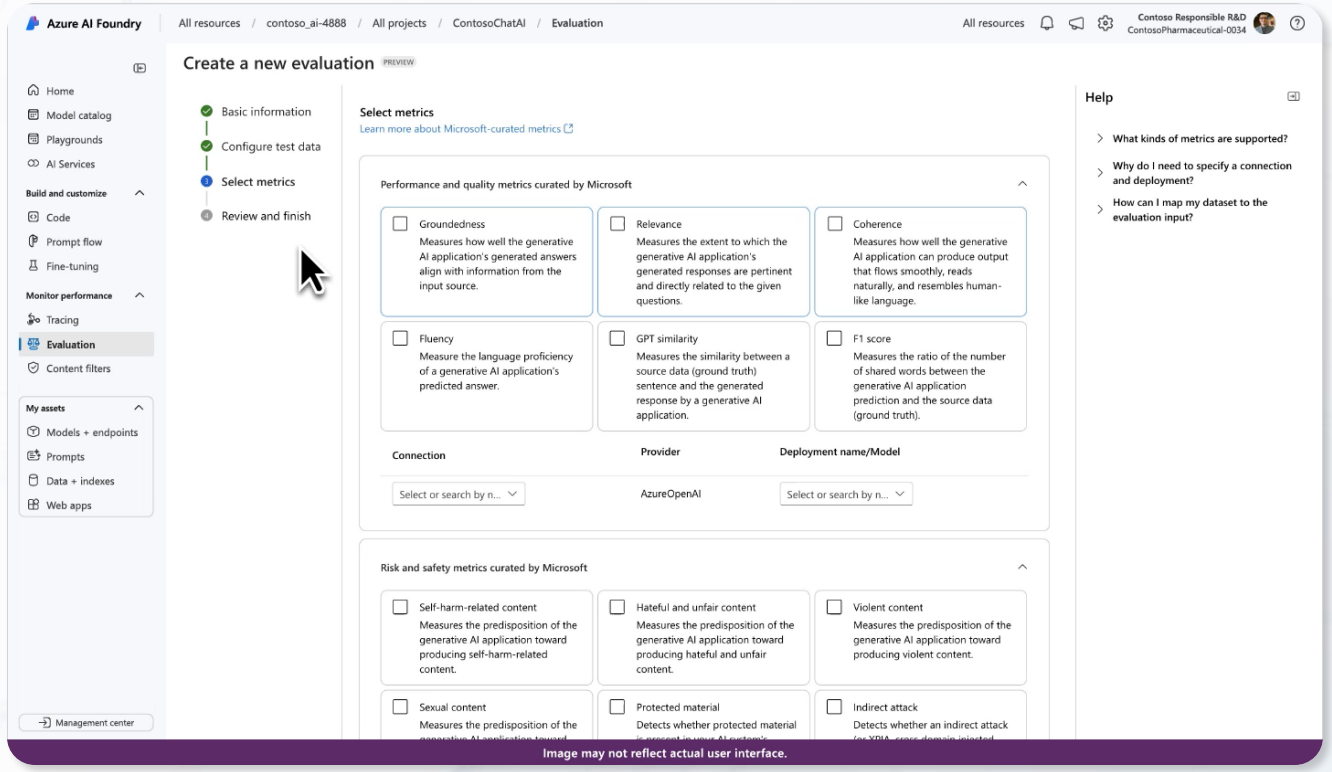

Design apps responsibly

Confidently build apps with technologies, templates, and best practices to help manage risk, improve accuracy, protect privacy, reinforce transparency, and simplify compliance.

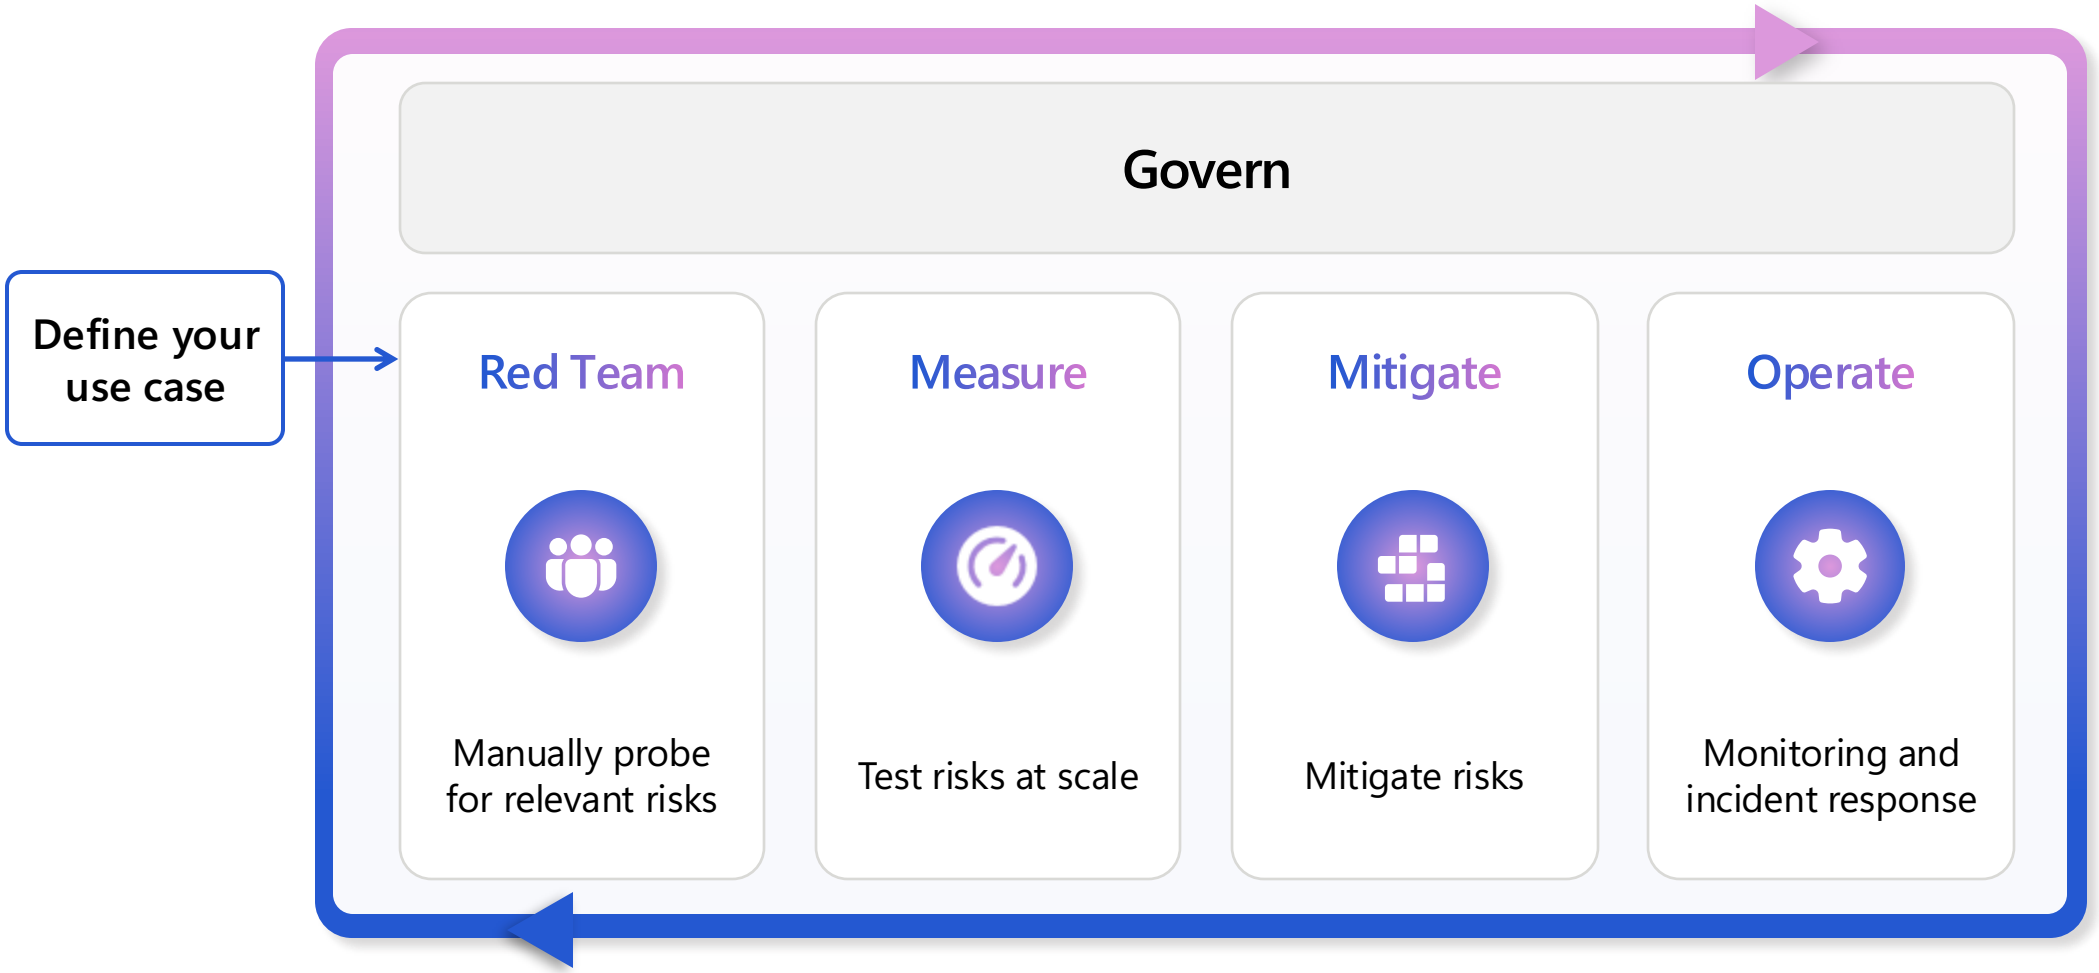

Safeguard with configurable filters and control

Detect and filter harmful content, protect PII, and safeguard applications against prompt attacks.

Responsible AI practices

Responsible innovation is iterative

Foundry Control Plane

Agents must be managed from code to runtime with a defense-in-depth approach

Agent 365

M365 Admin Center, Defender, Purview, Entra

Enable Security and IT admins to manage how agents act

Security and IT admins

Foundry Control Plane

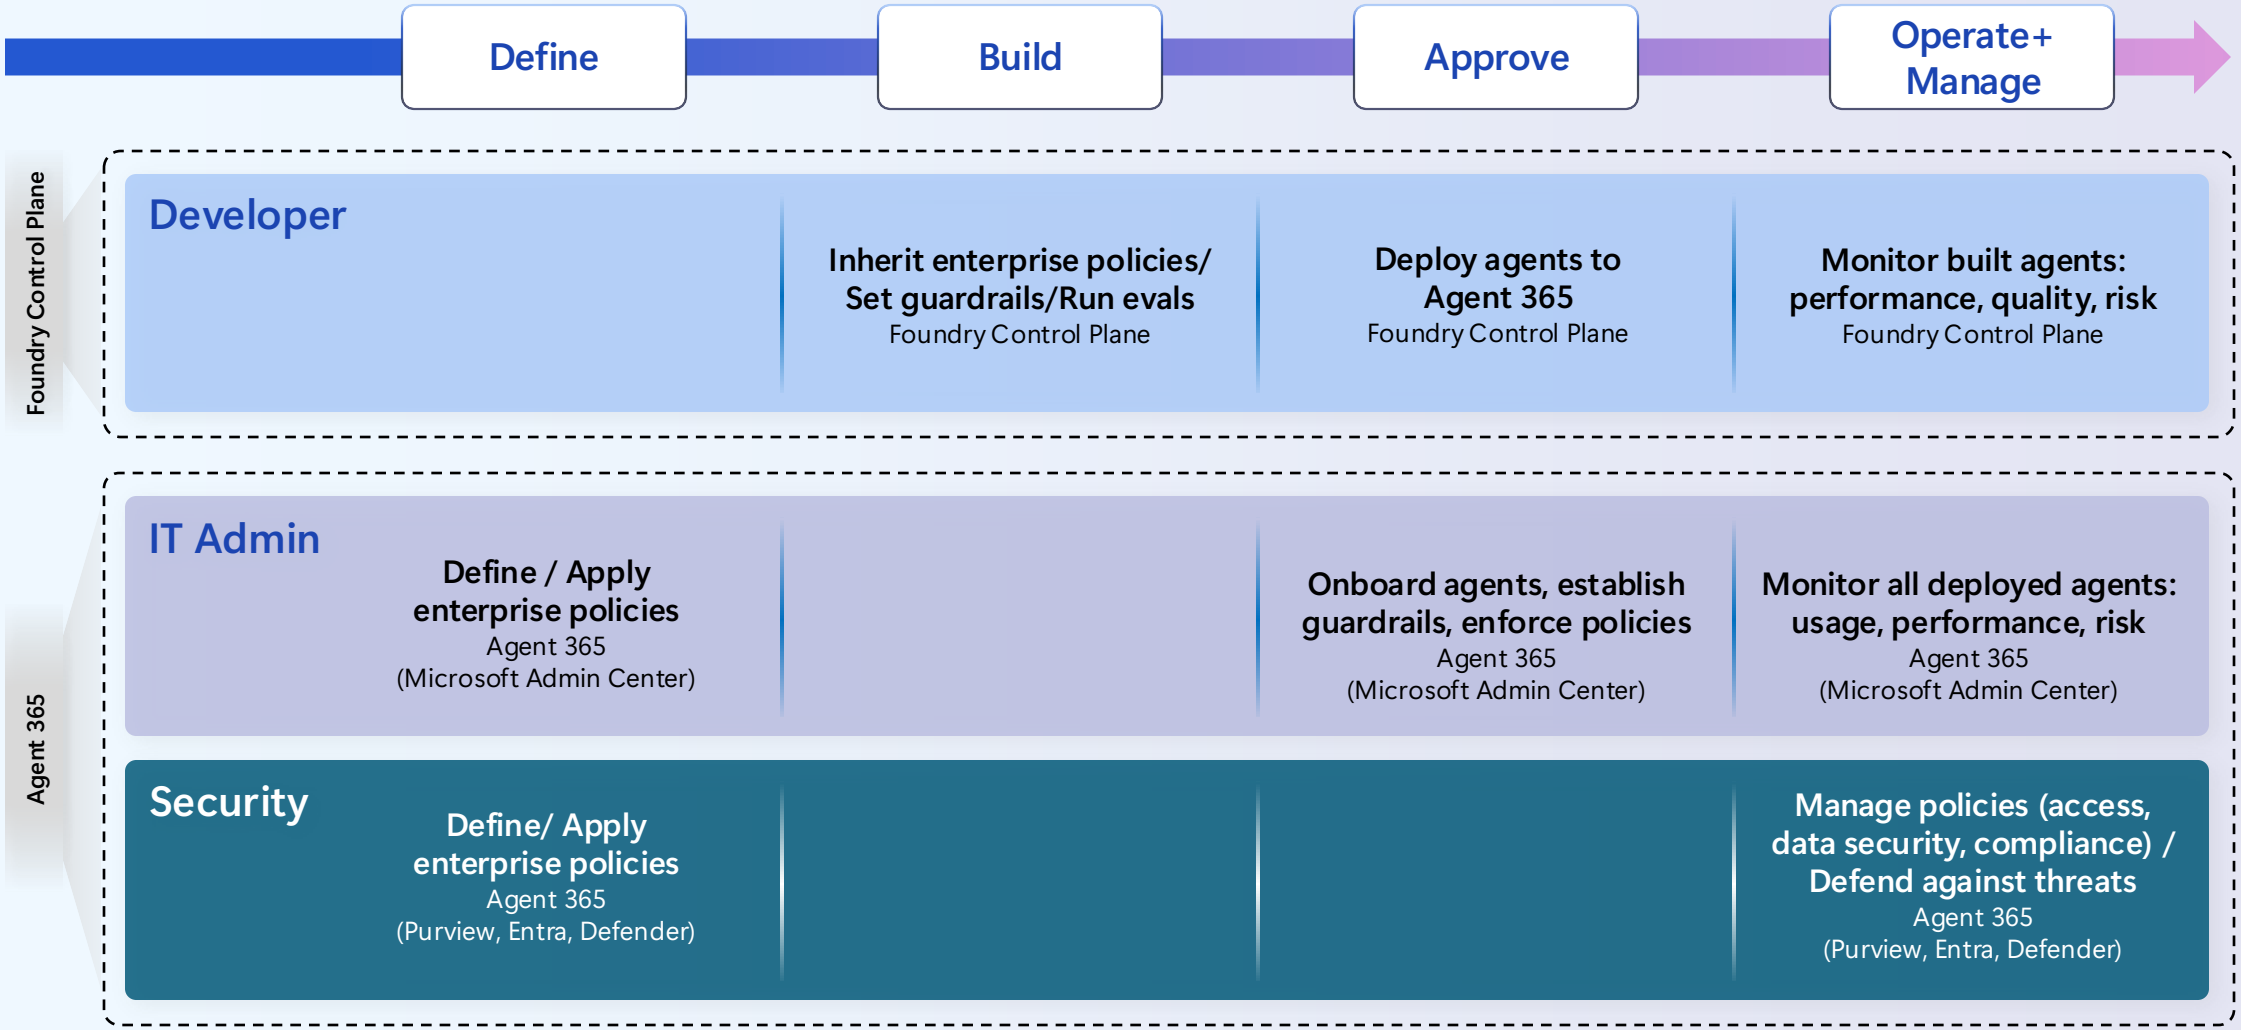

Microsoft Foundry

Enable developers to build, evaluate, and operate agent fleets

Developers

Observe, secure, and govern from code to runtime

Control the agent lifecycle end-to-end

Foundry Control Plane

Govern the AI lifecycle with organization-wide observability and controls

- Controls
- Observability
- Security
- Fleet-wide Operations

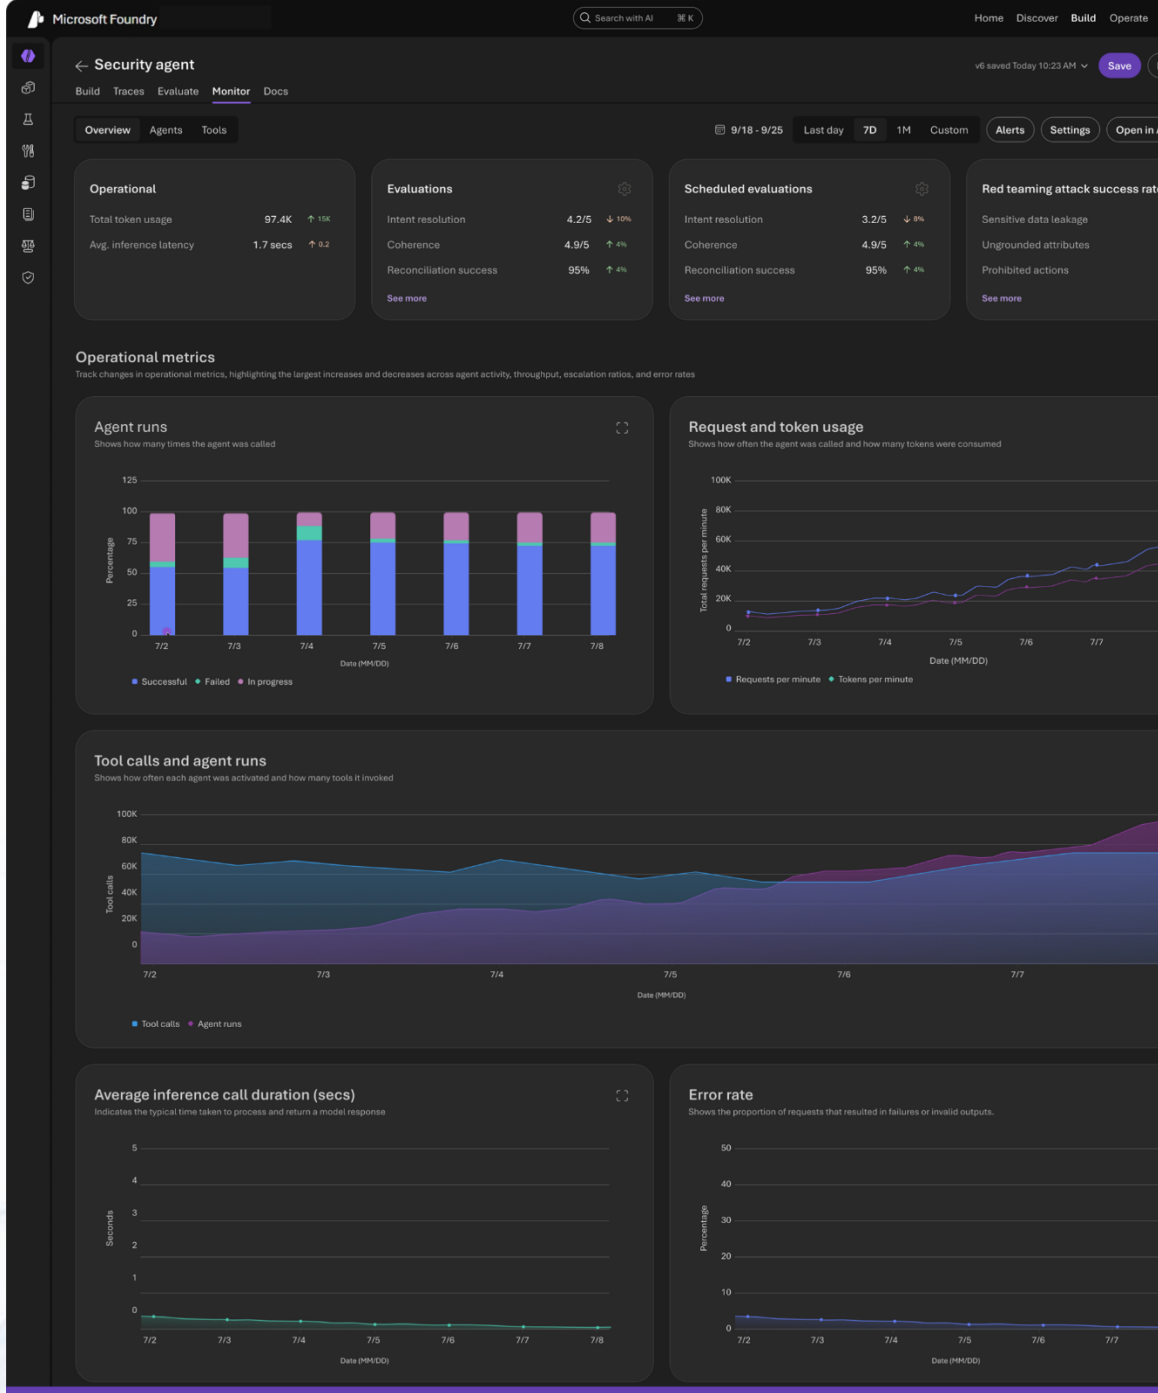

Image may not reflect actual user interface

Govern the AI lifecycle with organization-wide observability and controls

Foundry Control Plane

Define guardrails & controls

Keep agents safe, grounded, and on task across inputs, outputs, and tools

End-to-end observability

Understand every agent's health, cost, and behavior in real-time

Secure every agent

Enforce enterprise identity, runtime defense, and sensitive data protection

Manage agent fleets

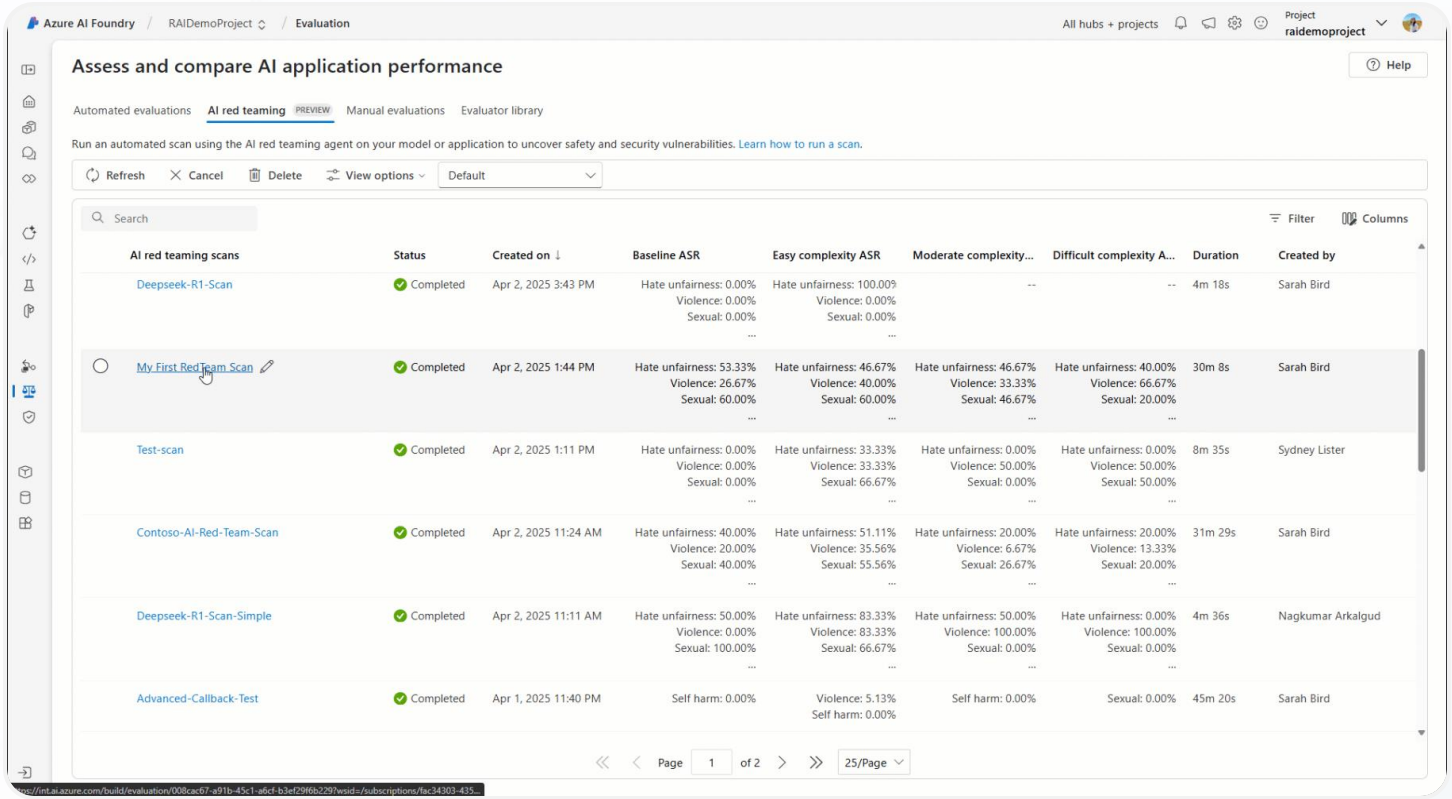

See and govern your entire agent fleet across clouds, frameworks, and teams from one control plane.

Everything developers need to observe, secure, and manage fleets of agents in one place

AI Red Teaming Agent

Accelerate AI risk discovery with PyRIT integration.

- Automated scans for content risks
- Evaluate probing success
- Reporting and logging

Content Safety in Foundry Control Plane

Keep agents safe and grounded using the same customizable controls as Microsoft Copilot

Your safety system

System message

Prompt shields

Task adherence

Custom categories & blocklists

Groundedness Detection & Correction

Microsoft Purview
Data security & governance

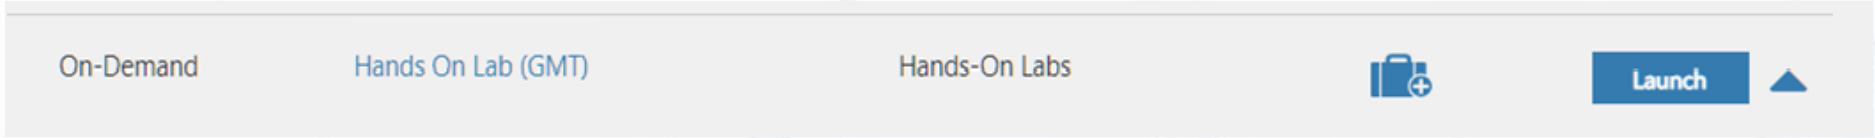

Microsoft Defender
Continuous threat detection & protection

Lab Activity 3

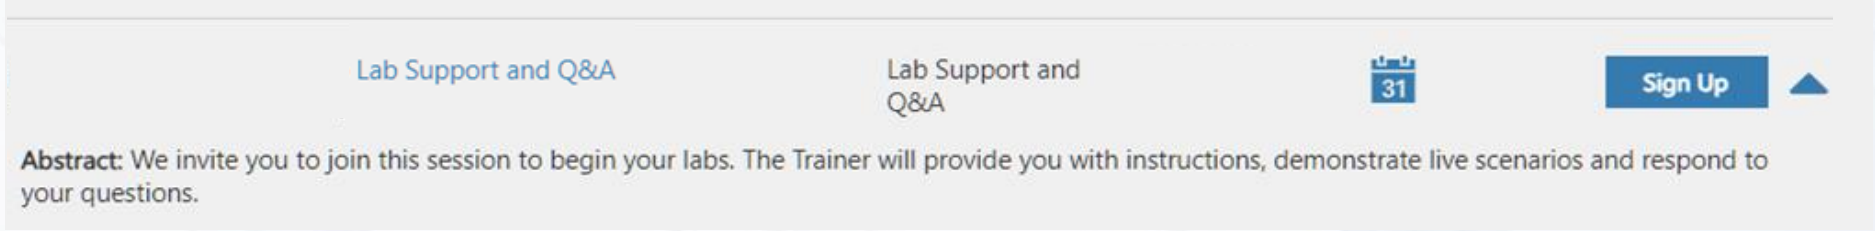

Hands-on Lab

Please note that the labs are only open to a limited number of Microsoft partner participants and are offered on a **first-come-first-served basis**.

- **Step 1** : Click on **Launch** in the event curriculum to launch your labs

- **Step 2 :** Join the **Live session for Lab Support and Q&A Session**

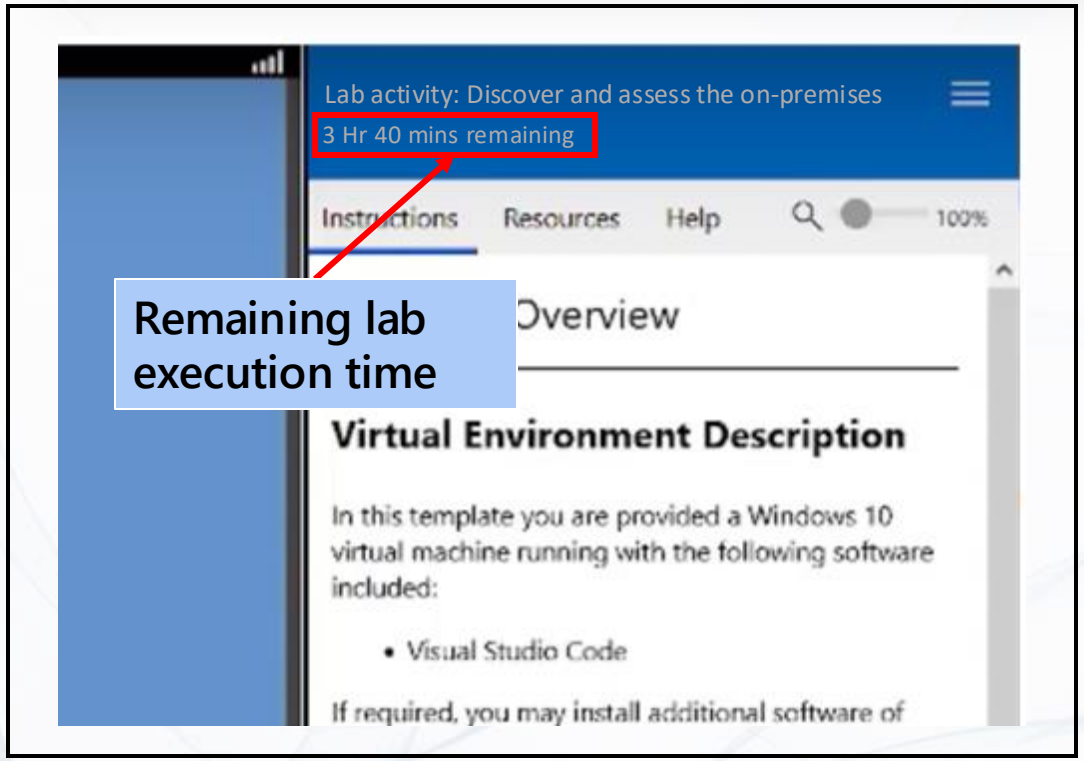

For all Lab logistical support issues, please go to: https://www.skillable.com/customer-support/ and select the "Open a Support Ticket"

Important lab information

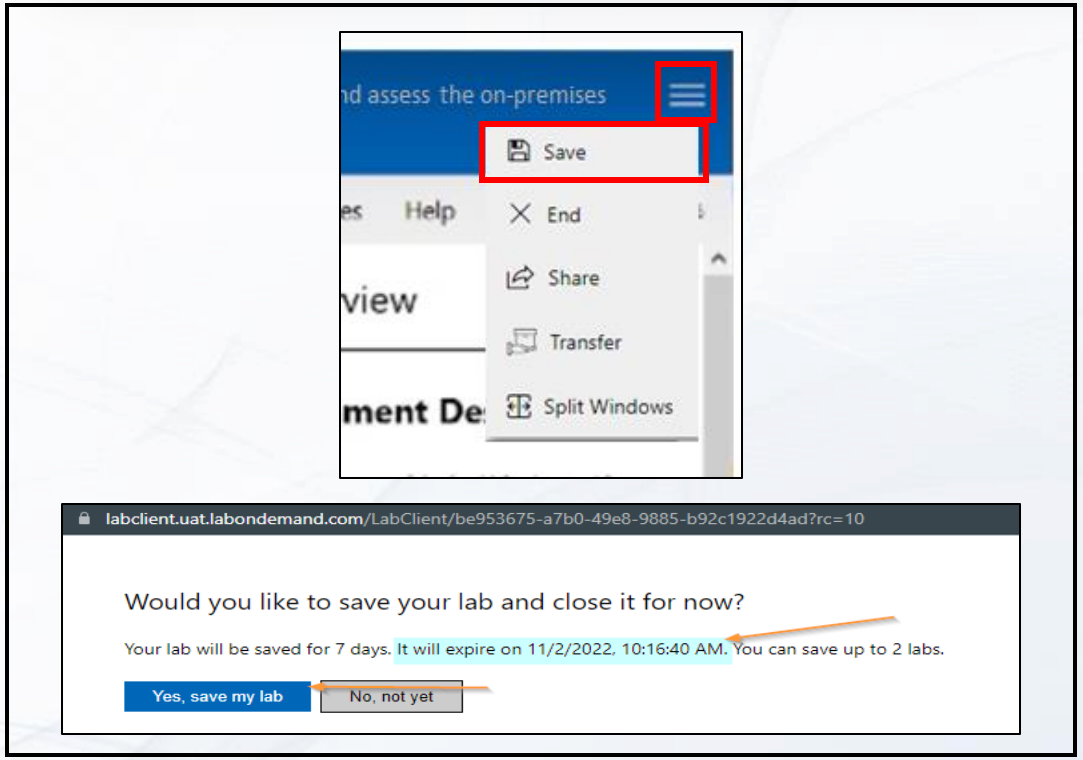

Track remaining lab execution time

- Once launched, a lab is available for active execution for the time displayed in the screenshot.

Save your Lab

- Ensure that you SAVE the lab after each break.
- Do not fail to relaunch within the specified time to avoid losing saved labs.

Once the allocated lab time expires, it can not be extended.

Hands-on Labs

Lab 06

Oversharing Assessment and Remediation using DSPM in MS Purview

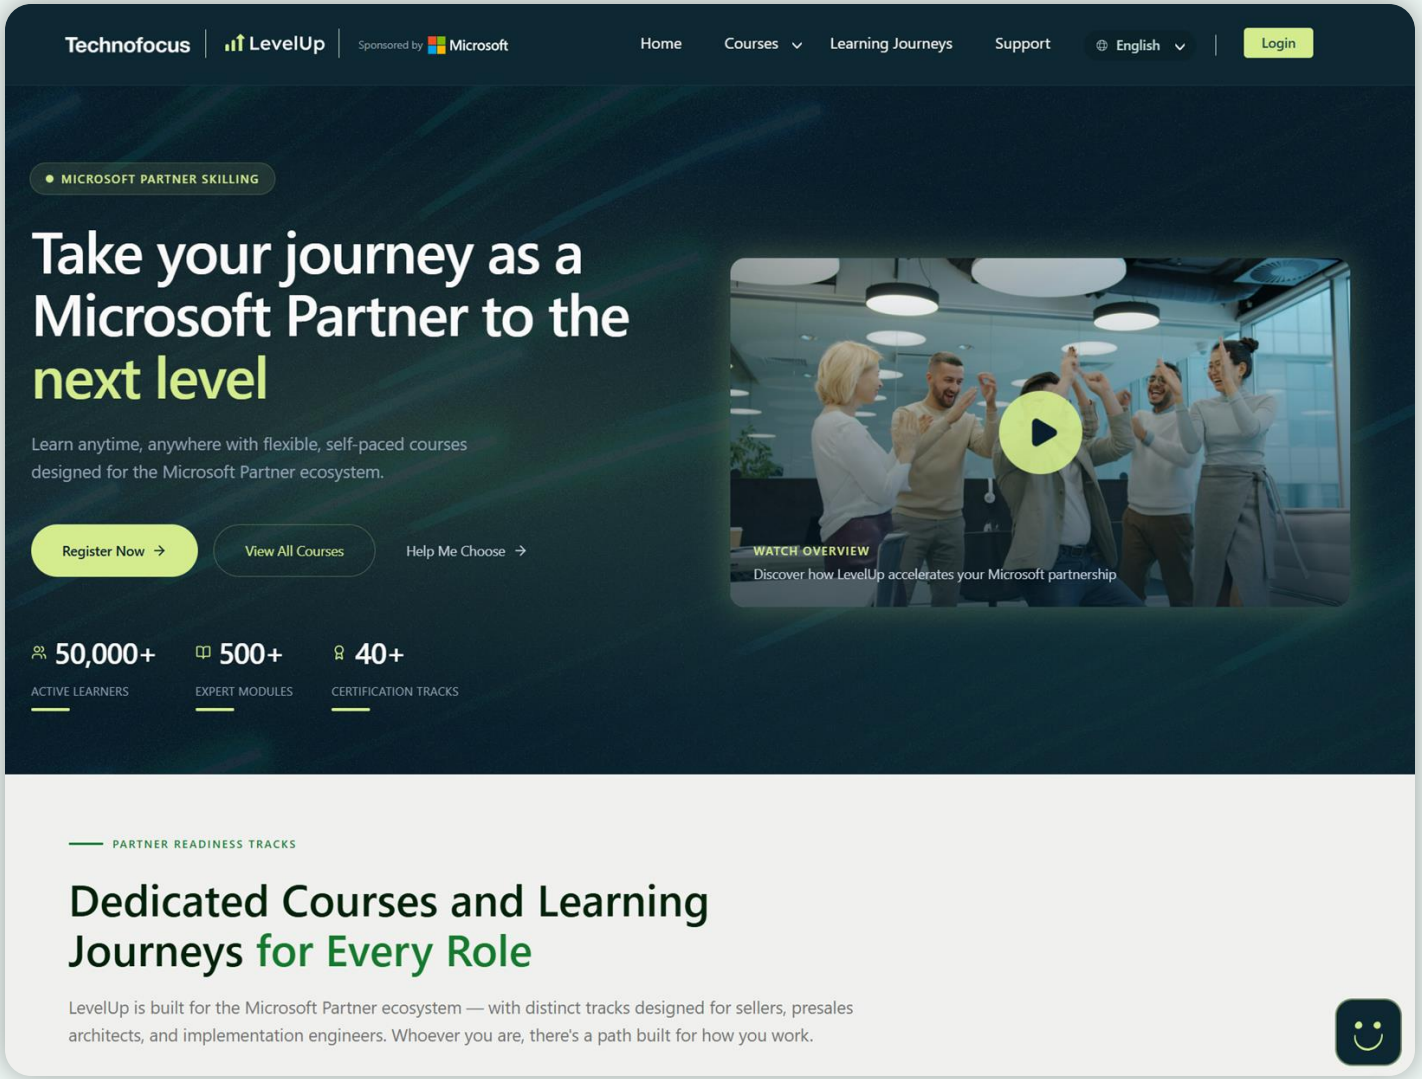

Lab 07

Audit, Retention, and Security Copilot in MS Purview

Data security objectives

View and track data security objectives for your organization. Each objective highlights key risks to address, actions to take, and progress over time. This helps your organization stay aligned with your overall data security posture. Learn more

Data discovery | Data protection | Data investigation

Data protection | Microsoft 365 Copilot

Prevent data exposure in Microsoft 365 Copilot interactions

30,916 Microsoft 365 Copilot and Microsoft Copilot interactions with sensitive data were detected from your organization in the last 30 days, an increase of 5%. This could indicate emerging patterns of data exposure.

30.9K interactions

↑ +5% in last 30 days

25.2K +2%
User prompts

256 +3%
Files overshared

Take action to reduce risk

Taking action could reduce sensitive interactions from 30.9K to 22K, which is about a 29% decrease.

View remediation plan | Copilot prompts

Review objective →

Data protection | Oversharing

Prevent oversharing of sensitive data

32,729 items are unlabeled and contain sensitive data from Microsoft 365 and Microsoft Fabric in the last 30 days, an increase of 4%. This could indicate emerging patterns of oversharing sensitive data.

21.1K items overshared

↑ +5% in last 30 days

4.2K -2%
Total unlabeled items

356 -3%
Items shared externally

Take action to reduce risk

Taking action could reduce oversharing files from 32.7K to 16.3K, which is about a 50% decrease.

Data risk assessments (Microsoft)

Use data assessments to identify potential oversharing risks in your organization. They also provide fixes to limit access to sensitive data.

Microsoft 365 | Microsoft Fabric

Item-level scanning and remediation available in custom assessments. You can now create custom assessments to scan individual files in SharePoint for potential oversharing and take remediation actions. Learn more about item-level remediations.

Create custom assessment

Assess and prevent oversharing of sensitive data in Microsoft 365

1 Identify
Review assessment results for users accessing sensitive items. You can review the weekly results from the Microsoft 365 default assessment or create custom assessments to review specific data sources and users.

2 Protect
Limit Microsoft Copilot access to sensitive data and apply label and retention policies to Fabric workspaces and data.

3 Monitor
Conduct SharePoint site and access reviews to evaluate permissions and user access.

Default assessment

Assesses oversharing of sensitive data for the top 100 SharePoint sites based on how many times the sites are accessed. Results are derived from data collected over the last 30 days.

Microsoft Purview DSPM addressing top priorities

Ensuring simple and efficient data security across data estate

- Outcome-based workflows
- Enhanced posture reporting

Adopting and leveraging AI and agents with confidence

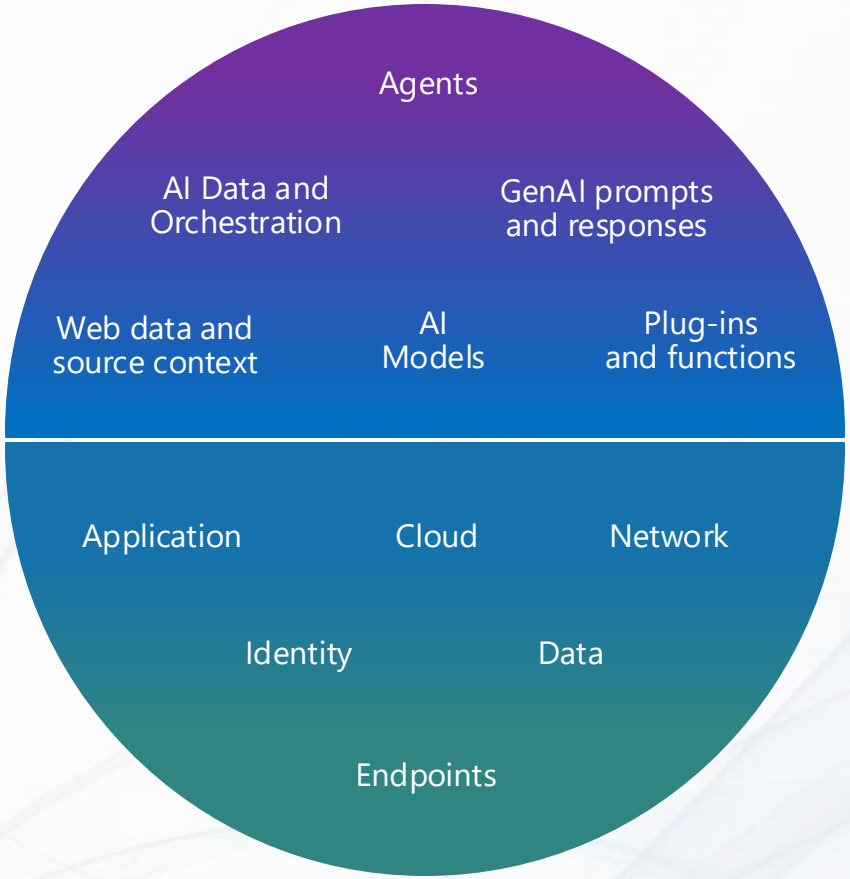

- Extended Data Risk Assessments
- AI Observability

Applying AI to accelerate and scale teams

- Data Security Triage Agent
- Data Security Posture Agent

AI and Agents bring new risks

New AI risk surfaces

Traditional risk vectors

Alert: Agent attempt at sensitive file exfiltration

Status: Active Alert for: Agent Severity: High Alert created on: September 6, 2025

Manage alert | View activity timeline | Summarize

Activity explorer | Agent activity | Agent profile

Filters: Show: All activity for this agent | Risk category: Any | Activity type: Any | Reset all

Sort by: Date occured

(2) SEQUENCE:

Access: Sensitive files accessed from SharePoint

Sep 6, 2025 (UTC) | Risk score: 95/100

3 Events: Accessed sensitive files.

Files:
PO_SecretPrototypeChips.pdf
PO_DisplayPanels.xlsx
PO_BatteryModules.docx
Files contain sensitive intellectual property.

Exfiltration Attempt: DLP blocked email to external recipient

Sep 6, 2025 (UTC) | Risk score: 85/100

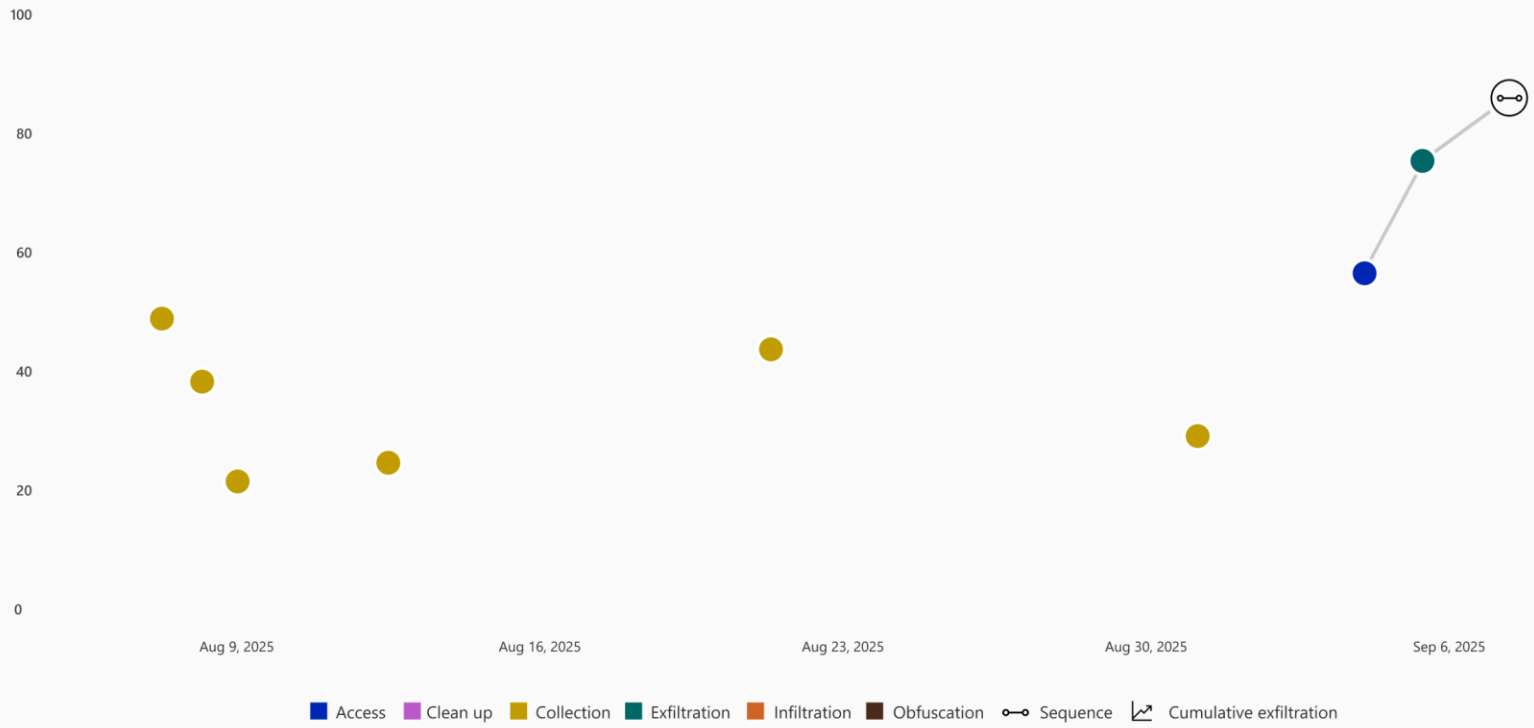

2 Events: Attempt to email sensitive information outside organization blocked with DLP policy

Recipient: mark@innovatek.com

Files:
PO_DisplayPanels.xlsx
PO_BatteryModules.docx

Onboarding Real-Time Protection for Copilot Studio Agents

STEP 1

Configure in Microsoft Defender

- Sign in to Microsoft Defender portal
- Navigate to: System → Settings → Cloud Apps → Copilot Studio AI Agents
- Verify Microsoft 365 App Connector is connected
- Enable if not already connected

STEP 2

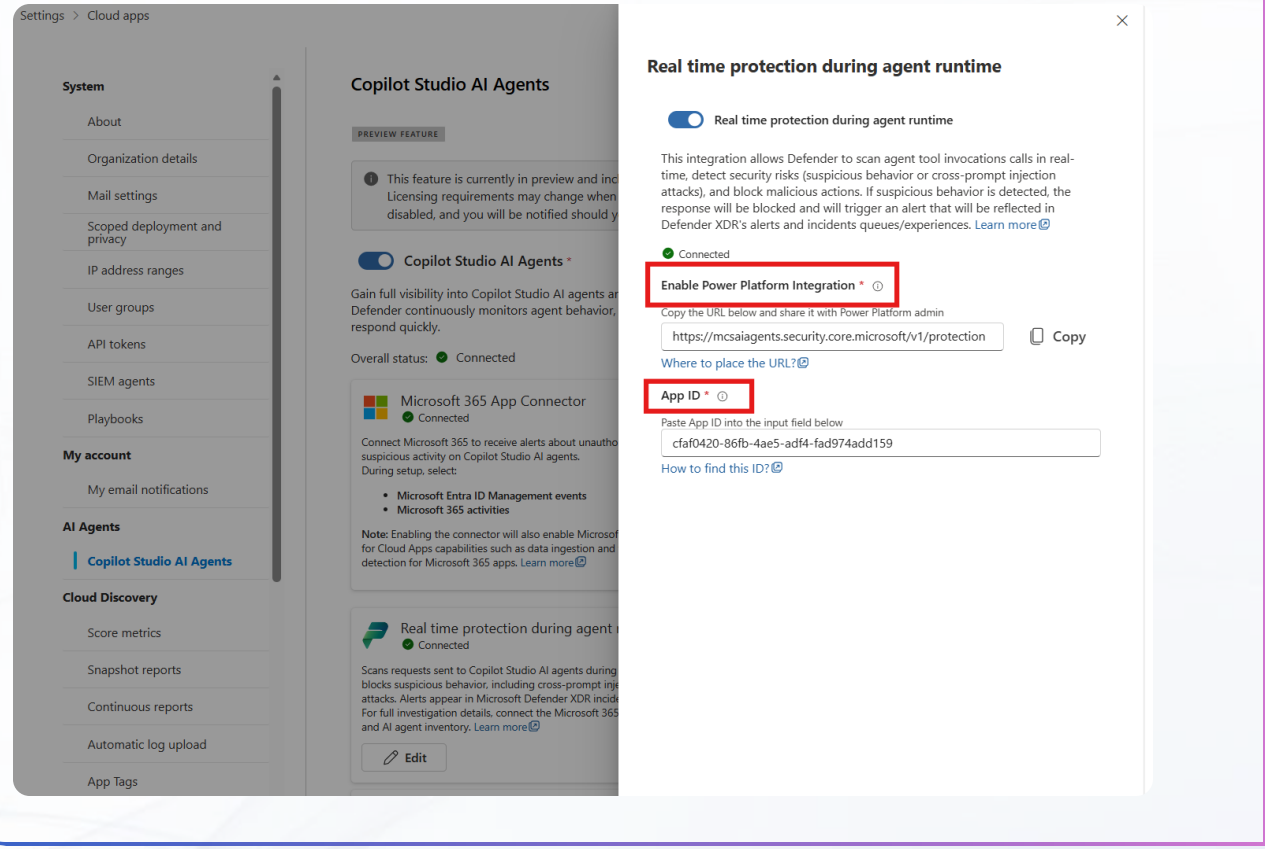

Coordinate with Power Platform Admin

- Enable external threat detection and protection for Copilot Studio custom agents
- Share the onboarding URL from Defender

STEP 3

Configure App ID

- Obtain App ID from Power Platform administrator
- Enter the same App ID in Defender
- Select Save.

Use advanced hunting in Microsoft Defender

STEP 1

Access Advanced Hunting

- Open Microsoft Defender portal → Microsoft Defender XDR
- Sign in with Security Admin (or higher) role
- Select Hunting from the left pane

STEP 2

Explore Schema

- Open the Schema tab
- Review tables such as CloudAppEvents
- Use the ellipsis (…) to view schema, sample data, retention

STEP 3

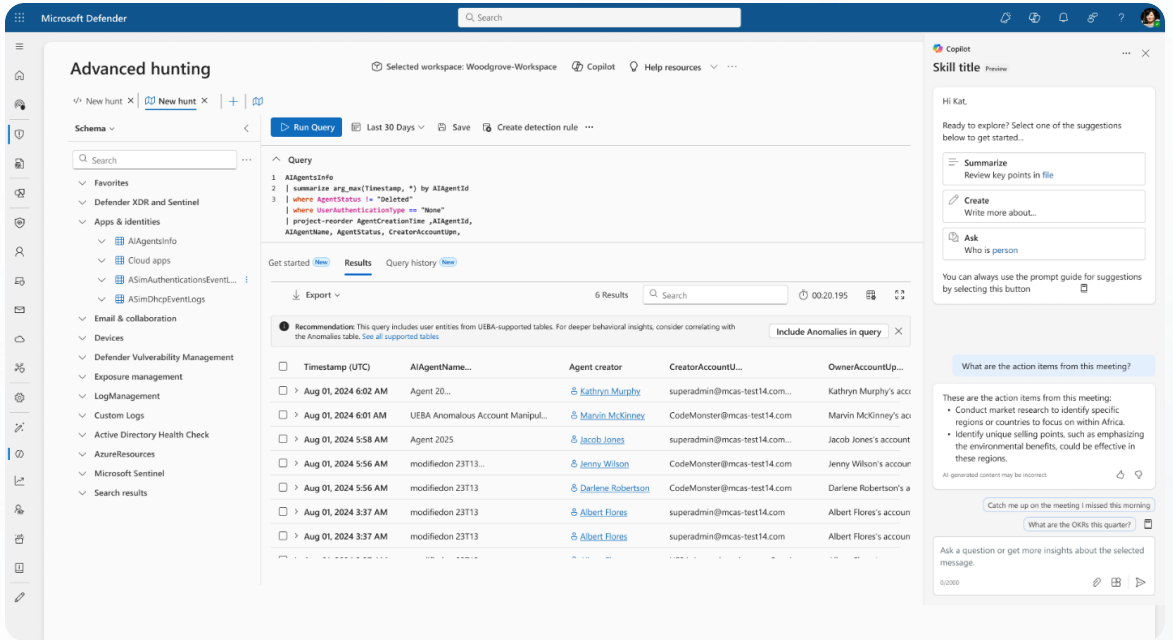

Run KQL Query

- **Example**
  CloudAppEvents | where ActionType in ("InvokeAgent", "InferenceCall", "ExecuteToolBySDK", "ExecuteToolByGateway", "ExecuteToolByMCPServer")

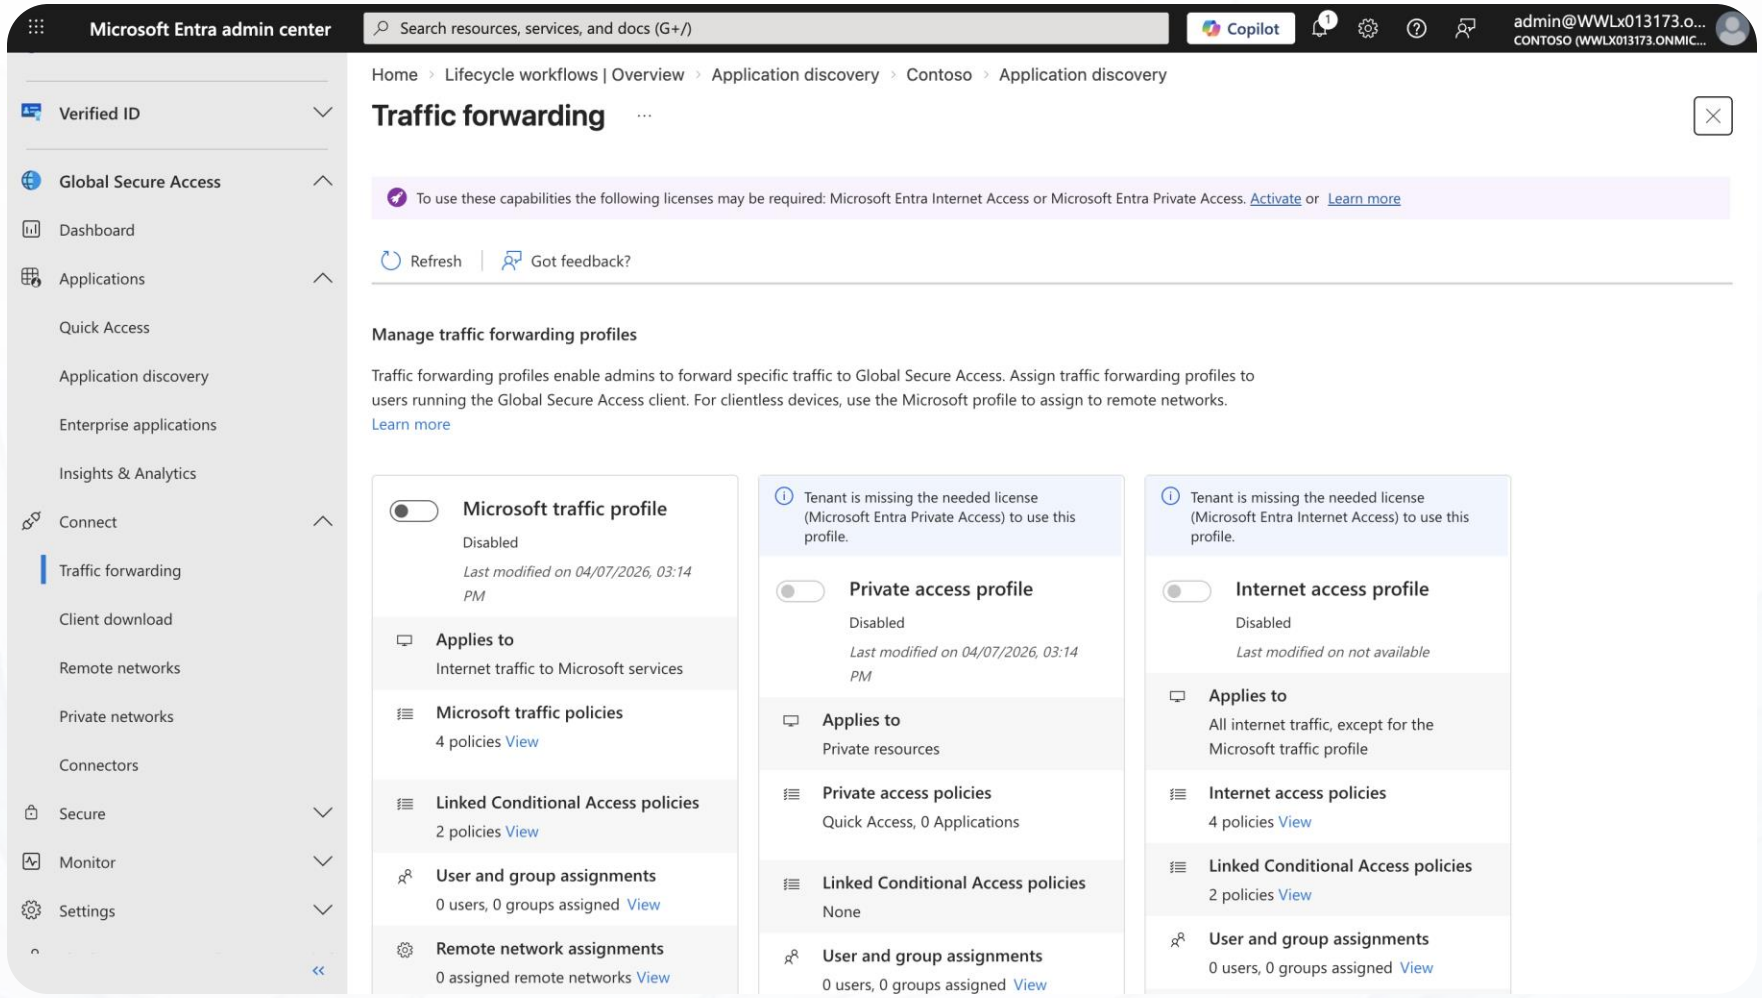

STEP 4

Analyze & Act

- Review results (tabular output)
- Export data or create custom detection rules
- Leverage built-in detection rules for real-time threat protection

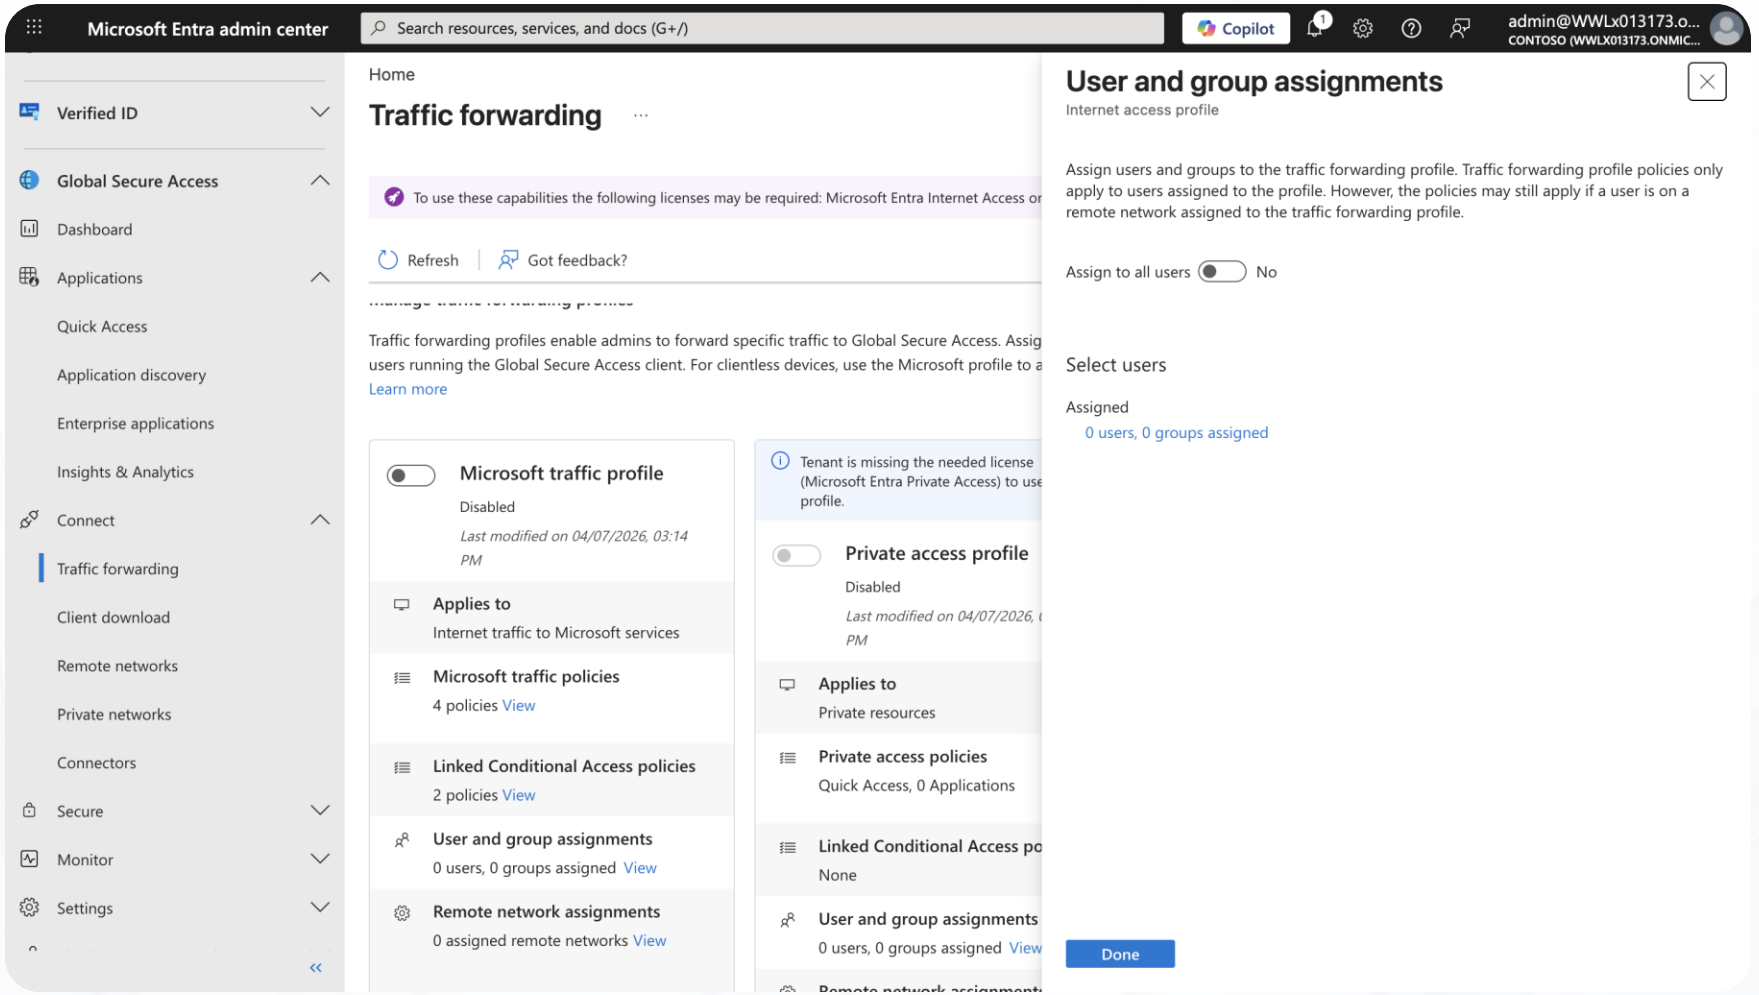

Step 1: Enable Internet Access traffic forwarding

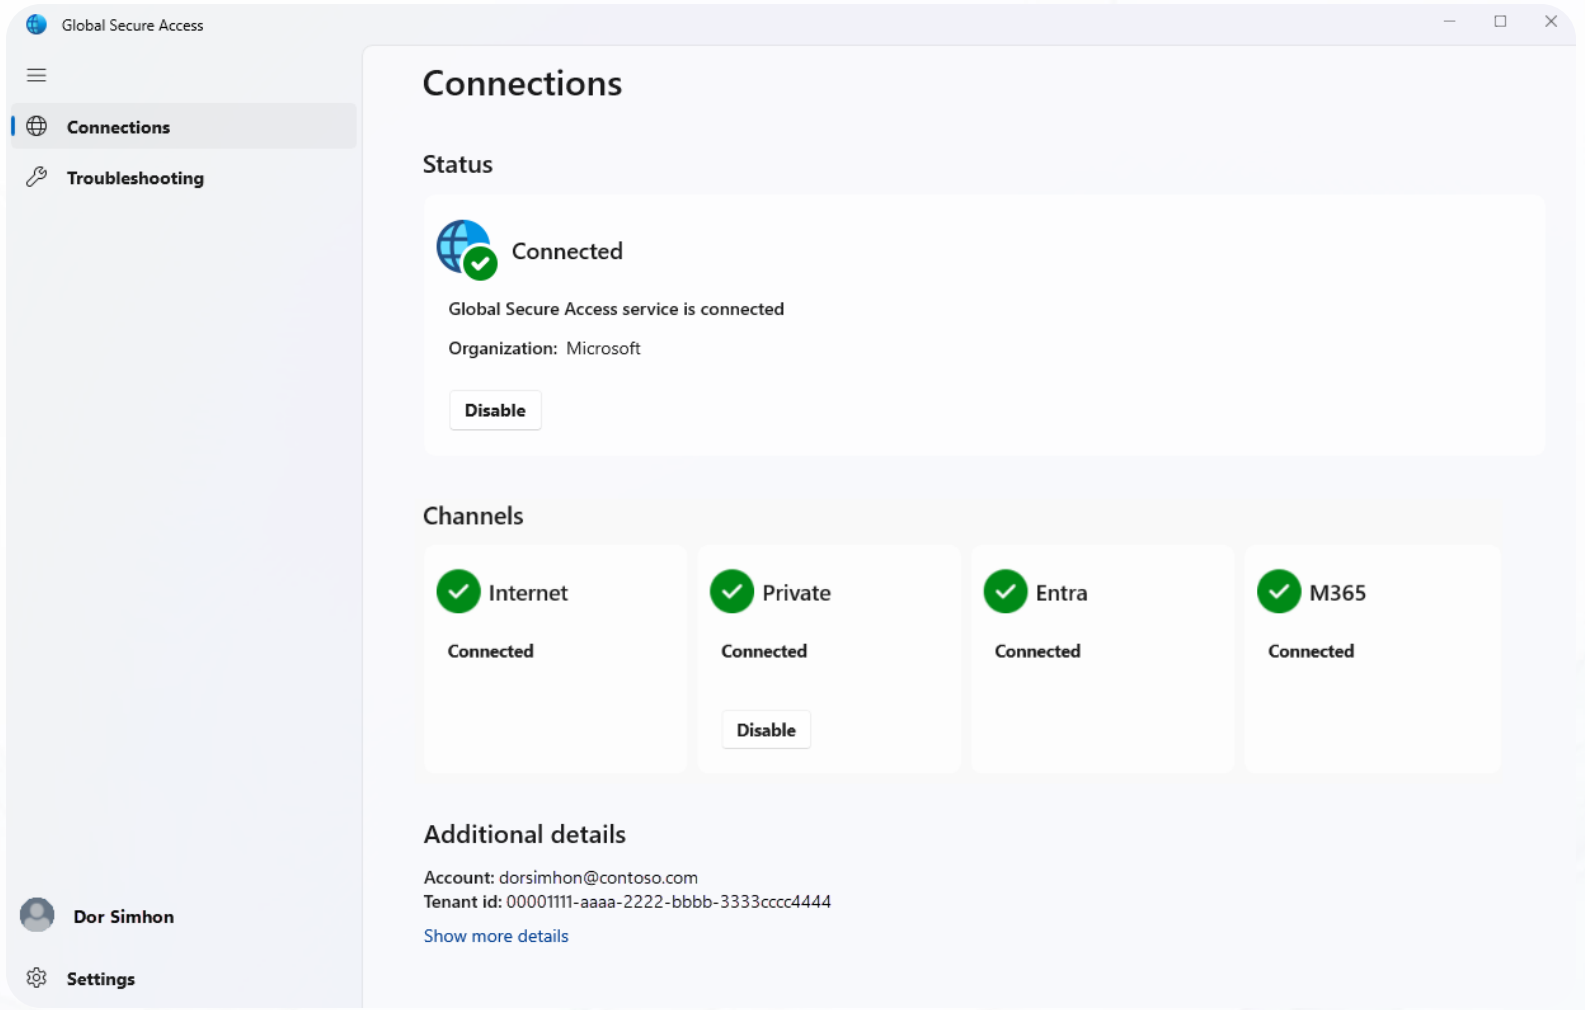

The Internet Access traffic forwarding profile routes internet traffic through the Global Secure Access client.

Step 2: Assign users and groups

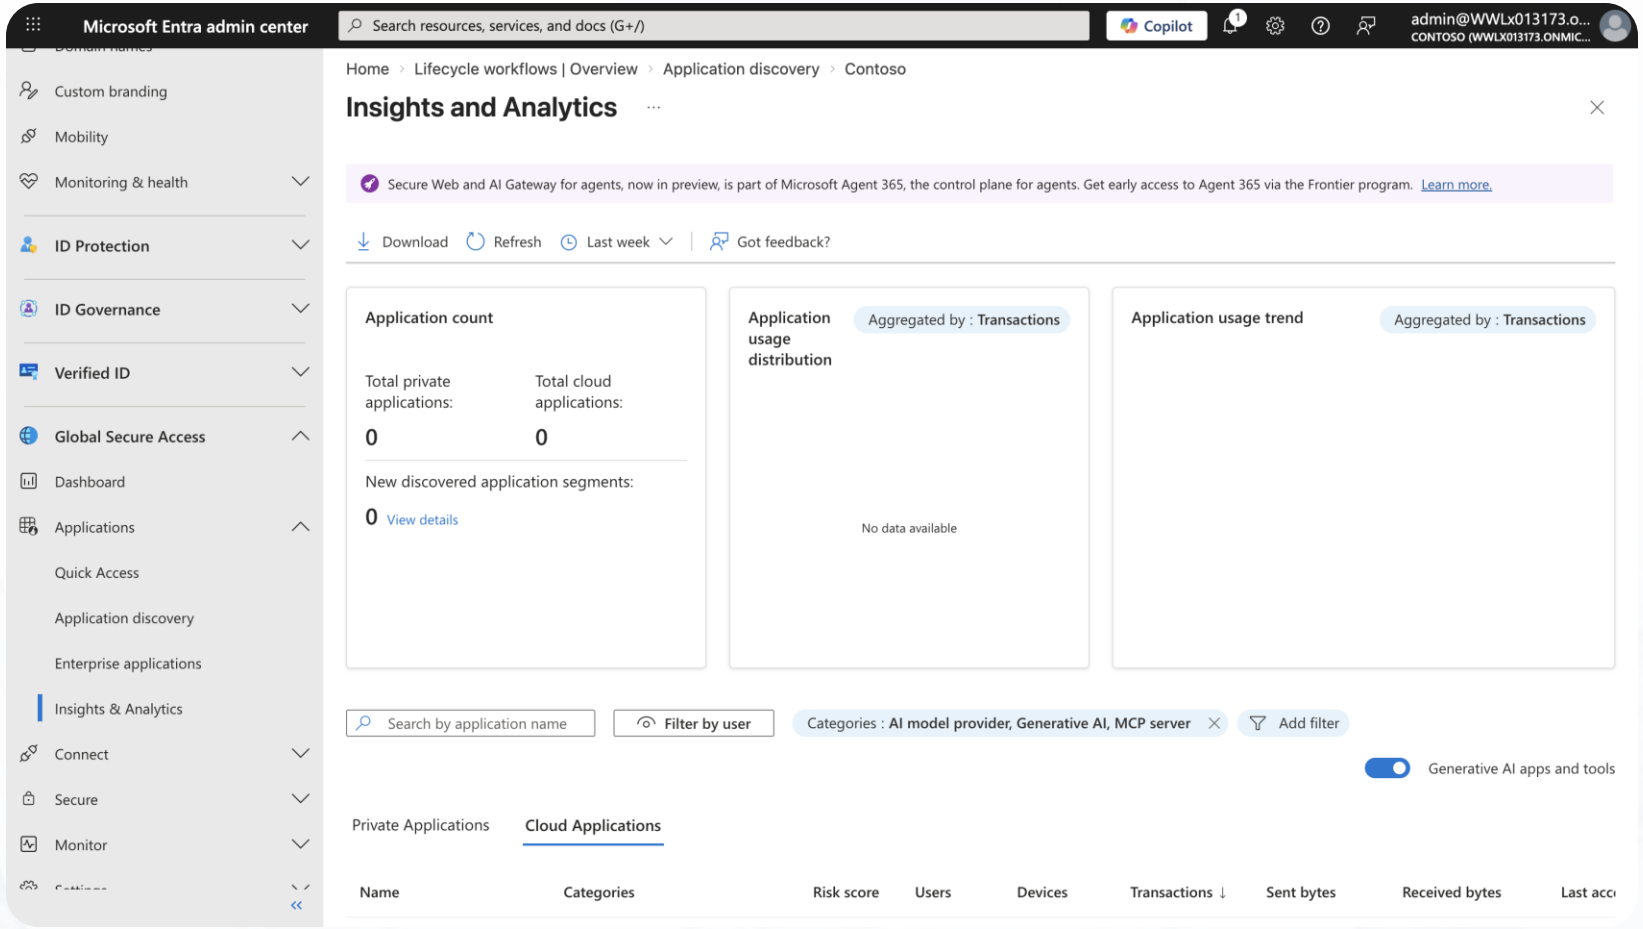

The Internet Access profile needs to be assigned to users before it takes effect. You can assign it to all users or scope it to specific users and groups for a phased rollout or POC testing.

Step 3: Install the GSA client

In the **Connections** view, you can see the client **Status** and the **Channels** configured for the client. To disable the client, select the **Disable** button.

Step 4: Access shadow AI discovery

Use the **Generative AI apps and tools** filter or toggle to highlight detected AI applications and view details like usage statistics and risk scores.
